Many children in this country live in homes torn by emotional or economic strife, where one or both parents are absent or some other misfortune has struck. In 1956 over 2½ million children under 18 had lost one or both parents by death. Of these, 1,450,000 are receiving social security benefits either directly or through their widowed mothers, averaging $38.00 a month per child.

About 1,800,000 orphaned or partially orphaned children are receiving help from their States through the Federal-State Aid for Dependent Children Program. In a State like Connecticut this help averages as high as $43.28 a month per child, but in Mississippi it is as low as $7.50 a month for each child.

Children with families have troubles, too. On a typical day 250,000 children living with parents or relatives are being visited or are receiving casework services from public or voluntary child welfare agencies. Sometimes these are children whose mothers are ill or disabled and homemaker services are needed, at least temporarily, for the home. In other cases the child is the unfortunate victim of divorce, abandonment, neglect or delinquency.

BABIES ARE STILL HANDLED BY BLACK MARKETS

Probably more than 100,000 children will be placed for adoption during the coming year. Will the adoption procedures protect the interests of both the child and the adopting parents, in the light of the black market and the grey market in babies?

The problem of properly supervised adoption is complicated by the fact that 75 percent of the children adopted by nonrelatives are so-called illegitimate babies. In the 84th Congress the Senate passed a bill seeking to curb the black market in babies but no action was taken in the House.

SOME CHILDREN MUST LIVE IN FOSTER HOMES OR INSTITUTIONS

Some children, unfortunately, nobody seems to want. The hard-to-place children are usually non-white or of school age or handicapped. The non-white hard-to-place children alone number over 96,000 a year. Other children are only temporarily homeless because of illness or some family tragedy. Foster homes must be found for all of these nonadoptable children or they must be placed in group homes or institutions. In 72 percent of the cases the child is placed in a foster home licensed and supervised by the local welfare department. However, many children are sent to institutions each year either because no foster home can be found for them or because institutional life is thought best.

It takes adequate child welfare services to treat, place and care for each homeless child in the way best suited to his development, yet half the counties of the United States have no full-time public child welfare workers. Four-fifths of those who do have them find the number insufficient to meet their needs.

TOO MANY CHILDREN HAVE POOR SCHOOLS

1958 finds the total facilities for public education inadequate to educate properly the record high number of school-age children. The total enrollment in public schools for 1958 is over 33½ million. A total school population of 38 million is predicted for 1961. Over 2.3 million children are attending school in overcrowded classrooms or in basements, converted garages or other makeshift classrooms. Approximately 840,000 are going only part time to schools operated on a double or triple shift basis.

The average child forced to attend half-day sessions loses what amounts to about

2 months' schooling a year in the basic subjects of reading, writing and arithmetic. In overcrowded classrooms, gifted children are held back, weak students do not get the special help they need, students drop out and teachers become discouraged and quit. Even though most localities are stretching their budgets to build needed classrooms, the building is not fast enough to meet the need. Between 56,000 and 65,000 new classrooms will be needed each year to take care of increased enrollments and the replacement of obsolete and hazardous buildings. The seriousness of the classroom shortage was effectively presented at the 1st session of the 85th Congress. Despite support from members of both political parties, a bill providing for Federal aid to help States to build schools was defeated, 208 to 203.

The shortage of competent trained teachers for our Nation's youth is even more alarming than the shortage of classrooms. When schools opened last fall, it was estimated that 135,000 classrooms had no qualified teachers in charge. Three-quarters of a million teachers will be needed in the next 3 years to meet the demand. Since the colleges and universities are graduating only about 100,000 trained teachers each year, and only 70 percent of them are going into the teaching profession, the prospect for improvement in the teaching situation is gloomy, indeed.

The effort of our Nation to education its children has not kept pace with its development and expansion. As a result, we are facing a serious shortage of brainpower in every field of endeavor. We are short of engineers, scientists, doctors, research specialists, social workers. Yet a third of our most gifted students do not go on to college and more than a million children have dropped out of school.

The reason for this lack? We are not willing to pay the price. We spend less than 3½ percent of our gross national income on public education, yet we spend over 4 percent on recreation and 3 percent on alcoholic beverages. We spend more for comic books than for all textbooks used in our elementary and high schools.

THERE'S TOO MUCH JUVENILE DELINQUENCY

The rank and file of American youth are youngsters in whom the Nation takes pride, but we cannot ignore the approximate 2 percent between the ages of 10 to 17 who get into such trouble that they are legally classified as juvenile delinquents.

We know that the causes of juvenile delinquency are many and complex. We know that we have not geared ourselves to cope adequately with the problem. Half of our cities over 10,000 in population have no special juvenile police officers. Detention facilities for children are so few that more than 100,000 children must lie in adult jails awaiting court action. Half the counties of the country have no juvenile probation services.

Legislation was considered in the 85th Congress providing for research as to causes, training of workers in the juvenile delinquency field, and help to the States in coordinating their efforts to solve the problem, but no bill was passed.

CHILDREN OF WORKING MOTHERS NEED DAY CARE

Approximately 2 million mothers with children under 6 are employed outside the home. When these mothers work, what happens to their children? During the war the Federal Government made a coordinated effort to assist States and localities in providing suitable day care centers for children of working mothers. This Federal support was withdrawn in 1946 and now the question of where to keep the child while the mother works depends on private plans or whatever public facilities happen to be provided by a particular community. If day care services are unavailable, insufficient or poor in quality, children and their parents suffer.

SOME CHILDREN ARE MIGRANTS

Probably the most neglected children in the land are the 600,000 or more who move from State to State with their parents, following the crops and helping to pick foods and fibers for the Nation's markets. They belong to no community because they do not live in one place long enough.

These migrant children remain almost uneducated because they receive few actual days of schooling and have little continuity in their school work. Residents of no State, they scarcely ever see a doctor or public health nurse or welfare worker. They live in substandard temporary houses or shelters, are hauled from place to place in trucks or crowded cars. Their only playgrounds are the fields where they often work beside their parents.

A small beginning has been made to focus some attention on these children. One program, on which many Government agencies are working together, helps some of the children whose parents work in the 10 States along the east coast. This is but one feeble effort. The problem must be handled community-by-community where migrants work.

Along with the children of migrant workers one should mention the 9.1 million children who in 1955 (the last year for which figures are avaiable) lived in families where the total monetary income was less than $40 a week. Considering the fact that essential expenditures for a family of four in that year cost from $75 to $88 a week (depending on the section of the country), it is easy to understand why many of these children drop out of school to work to help buy groceries for the family. Comparable figures are not yet available for 1957, but we do know that the cost-of-living index has risen almost 6½ percent in the last 2 years.

RETARDED CHILDREN NEED SPECIAL ATTENTION

Although no accurate figures are available, it is estimated that 3 percent of the children already born are mentally retarded in some handicapping degree. If the current birth rate continues, there will be 300 babies born every day in 1958 whose mental development will be retarded.

Recently, concern for these children has stirred cities, States, and the Federal Government to action. States have begun to set up diagnostic clinics to help the parents of such children. These clinics are assisted through Federal funds administered by the Children's Bureau.

The Federal Government has embarked on research to find the cause of mental retardation in the hope that ways may be found to prevent it. Research is also being done on teaching the mentally retarded. The big need now is for fellowships and scholarships in colleges and universities to help produce well-trained teachers for the mentally retarded.

EMOTIONALLY DISTURBED CHILDREN NEED HELP, TOO

It is estimated that there are approximately a half million children who are so emotionally disturbed as to be considered mentally ill. They have normal and often superior intelligence but they cannot function as normal children. They are barred from public schools. Private psychiatric facilities, to which they might turn for treatment and education, are scarce and expensive. Public clinical facilities are needed so that these children can be helped more easily. Programs are needed to help communities accept the mentally ill child as a sick child and assume responsibility for his care.

The educational needs of mentally ill children are the same as those of the mentally retarded—special schools or special classes and specially trained teachers. Bills were introduced in the 84th and 85th Congresses to provide a small grant to colleges and universities for the special training of teachers for these children, but these bills, unfortunately, were not enacted.

ACCIDENTS AND HEALTH HAZARDS

Accidents are likely to be the leading cause of death among people under 19 in the coming year, as in the past. The high rate of accident fatalities between the ages of 18 and 19 (50 per 100,000 in 1954) reflects the large number of accidents among teen-age drivers. The rate among children from 1 through 4 in 1954 was 24 per 100,000, and from 5 through 14 it was 20 per 100,000

Thanks to medicine we no longer fear diseases like diphtheria, whooping cough and scarlet fever, which once caused the death of so many children. That a child may die from some other fatal disease, however, is still a stark reality.

Cancer claims the lives of more children than any other single disease. Half of these children, about 4,000 a year, are attacked by acute leukemia, for which there is as yet no known cure. Congenital malformations cause the death of over 17,000 children each year and many others are left with a handicapping condition they may carry through life. In 1955, over 11,000 children in the 1- to 4-year-old group died from the several diseases in the pneumonia and influenza category. Rheumatic fever and other diseases affecting the heart cause over 1,000 deaths a year among children, and tuberculosis almost 5,000, despite the progress made in control of the disease. Muscular dystrophy affects approximately 100,000 children between the ages of 3 and 13. About 250,000 children of school age suffer from rheumatoid arthritis. Forty percent of them are left severely crippled.

Fortunately, the Salk vaccine has largely removed the threat of crippling polio but unfortunately there are still too many children who have not yet had the full series of three shots required for long-time protectiton. There still remain at least 80,000 children badly crippled from polio in the past who need therapy, braces, and other assistance.

MANY CHILDREN HAVE HANDICAPS

"Will my child ever be able to live like other children?" is the question asked earnestly by parents of more than 5 million children physically handicapped as a result of congenital malformations, accident, or disease. By far the largest number are those children suffering from defects of speech and hearing. If all the schools in the country were to give an accurate hearing test this month, over a million youngsters would prove to have hearing difficulty serious enough to require immediate attention.

Over 2 million children in the country have speech disorders of such severity as to interfere with their educational progress and social and emotional development. Cleft palate and cleft lip account for a large number of the speech handicaps. About 5,000 children are born every year with these malformations.

Children with defects of speech and hearing should have more classroom space and more special teachers. There is need for more speech and audiology centers and more research to determine how well the needs of these children are being met.

Over 17,000 children in the country are totally blind, and another 70,000 have only partial sight. Some of the latter who are receiving no care will become blind and the others will go through life with visual handicaps. About 200,000 children are now vic-

tims of cerebral palsy and it is estimated that some 10,000 babies born this year will have one of the damaging brain injuries that comes under that general term. The number of children suffering from handicapping epilepsy is estimated to be somewhere between 300,000 and 500,000.

EXPENDITURES FOR CHILDREN HAVE NOT KEPT PACE

It's more than a little grim, this sum-up of the state of the Nation's underprivileged children.

Before World War II, about 2 million children were born each year in the United States. But during the war, and since then, the annual birth rate skyrocketed, and now it exceeds 4 million. Unfortunately, but understandably, government appropriations—local, State, and Federal—have not been increased quickly enough to provide the needed educational, health, and welfare services for the rapidly increasing number of children; and conditions are likely to get worse in the coming decade, when our child population will be growing faster than ever. In 1940 there were 40 million children under 18 in the United States; in 1950, 47 million; currently there are 60 million; and by 1965 (only 7 years hence) there will probably be 67 million. If the children of the United States are to receive the educational, health, and welfare services that they need now and in the future, appropriations for such services will have to be increased on the local, State, and Federal levels. This may mean increased taxes unless there is governmental reduction in expenditures for armament, foreign aid, or other purposes. But if we want our children to have good schools and adequate health and welfare services, we must be willing to pay for them.

Expenditures on behalf of children should be considered an investment in the future of the Nation. Prosperity in any country depends upon an educated citizenry which will demand and finance a high standard of living and which will be able to supply the competent workmen and executives needed for such an economy. Adult illiterates (there are already 10 million of them in the United States now) are a great liability. Unless children get adequate schooling and services to guard their physical and mental health during their formative years, the result is likely to be greatly increased costs for prisons, mental institutions, hospitals, and relief rolls to provide for them as adults.

Economy and efficiency in government are important, but drastic cuts in essential services for children are not economy. Money spent to improve the health, education, and well-being of children is an investment in priceless human resources which will pay rich dividends in the future—one we should be proud to make.

Storage of Surplus Lignite at Garrison Dam

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, March 10, 1958

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution from the industrial committee and board of directors of the Greater North Dakota Association relating to surplus lignite at Garrison Dam.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the present stockpile of over 2 million tons of surplus lignite stored at Garrison Dam by the United States Army Corps of Engineers may be the trigger that will set off a large-scale industrial development chain reaction in the State of North Dakota by attracting the first large power-consuming industry to our State, and further, since several of those large power-consuming industries have already indicated an interest in the stock-piled lignite; and

Whereas in the event of a national emergency or crisis, such a stockpile of lignite would be of tremendous value as a ready source of energy for military and civilian needs; and

Whereas qualified observers have tested the stored lignite and report very little deterioration has taken place and very little will take place if the stockpile is left undisturbed and properly maintained; and

Whereas there is no demand for the land on which the lignite is now stored; and

Whereas the Federal Government would not realize a proper return from the sale of lignite in the present weak market; and

Whereas such sale would seriously disrupt the orderly marketing of lignite by present private producers: Now, therefore, be it

Resolved by the industrial committee and board of directors of the Greater North Dakota Association, North Dakota State Chamber of Commerce, That the United States Army Corps of Engineers and any other Federal agency or department involved, be and they hereby are requested to hold the surplus lignite at Garrison Dam, and be it further

Resolved, That should conservation of this potentially valuable resource be impossible, the Corps of Engineers and any other Federal agency or department involved, are hereby requested to dispose of the lignite in such manner as to have the least possible impact on the existing lignite mining industry in North Dakota; and be it further

Resolved, That copies of this resolution be sent to the members of the North Dakota congressional delegation and to Gov. John E. Davis.

Attest:

HOMER W. LUDWICK,
Executive Vice President.

Statement of Samuel C. Waugh on Export-Import Bank

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Samuel C. Waugh, president, Export-Import Bank of Washington, before the House Committee on Banking and Currency, on Tuesday, February 25, 1958:

Mr. Chairman and members of the committee: On behalf of the board of directors of the Export-Import Bank I appear before your committee in support of the proposal to increase the bank's lending authority by $2 billion. It has been my privilege to serve as president and chairman of the board of directors of the bank since October 1, 1955. Prior to my present appointment, I represented the Department of State as an ex officio member of the board, so my knowledge of the bank's operations dates approximately from my original confirmation by the Senate nearly 5 years ago. Each director is conscious of the responsibility in representing an institution which on February 12 observed its 24th year as the major foreign lending arm of the United States Government.

This sense of responsibility is greater because of our conviction that, to the great mutual advantage of our citizens and those of friendly countries, the bank has served United States private enterprise and our friends abroad with honor and mutual benefit. The proposal under consideration by the committee is necessary for proper continuation of the bank's present policies and activities.

Most members of your committee will recall the 1954 hearings which again considered our position and then reaffirmed the position of the bank as an independent agency under bipartisan management. It is a pleasure to report to you that these injunctions of the Congress have been upheld, in the spirit as well as the letter. You may be assured that we will continue to be faithful to the spirit of independent, bipartisan service to the international lending needs of the United States.

The primary need for Export-Import Bank is to consider financing abroad which the private capital market in the United States will not undertake. The statute says the bank "should supplement and encourage and not compete with private capital." Over many years of international economic dislocation, of wars and their aftermath, private financing has not been able to meet all the world's needs for trade and investment.

This is partly true for medium-term financing, and particularly true for longer term needs. This is also partly true for the less-developed areas as a whole, and particularly true for some countries with great potential but equally great present-day problems and needs. And it is always true for emergency financial needs of great magnitude.

The Export-Import Bank's objective is to supplement the facilities of the private capital market. But we do much more to supplement private finance and private enterprise than merely by refraining negatively from competition. In a positive, fruitful way, and to an impressive extent, we supplement and encourage private capital and enterprise. Our positive assistance to private capital and enterprise takes many forms, such as the following:

We make development loans to private companies in foreign countries. We act, in effect, as partner. We make loans to supplement private investment when necessary to assure that private funds will venture into the transaction or investment. We have always been especially interested in stimulating investment in private activities abroad, new ones as well as old ones, American-owned as well as foreign-owned. For example, we have conducted operations in association with such representative firms as the American Smelting and Refining Co., American and Foreign Power, Bethlehem Steel, Firestone Rubber, Goodrich Rubber, Lone Star Cement Co., Republic Steel, and the Utah Construction Co. This last point must be stressed because of the impression in some otherwise well-informed circles that the Export-Import Bank does not lend to American business enterprises for their overseas operations.

Our development loans to other governments or official institutions, which cover generally their purchases in the United States, definitely have the effect, directly or indirectly, of assisting the healthy growth in other countries of private industry and trade, foreign as well as American.

Many of our loans to foreign public institutions have been directly for relending to private enterprises. There are many examples of this, such as loans we have made to Mexico, Israel, Italy, and the Philippines.

Many development loans have been to construct basic public facilities for which private capital was not available and without which further growth of the private economy would be difficult, if not impossible. Examples in Asia, and Latin America are part facilities in Turkey, railroads and highways in Iran, power in the Philippines, dams in Mexico and Brazil, the Inter-American Highway in Central America, railway and port improvements in Brazil. Still other loans have been made to assist the restoration of customary financial relations and to permit the resumption of normal private trade and finance.

The bank also makes what we call exporter credits, at the request of United States equipment manufacturers. These credits, assist our United States firms to complete sales which they cannot finance entirely through their own resources. In this manner the bank is able to be of assistance to some of the smaller exporters. This past year we had one credit as modest as $550 to assist in the financing of the sale of a disc plow.

There are other forms of cooperation between the bank and the private capital market. We participate jointly with private banks or insurance companies in making loans to particular borrowers. Commercial banks disburse funds for us under arrangements whereby we guarantee to take them out under certain conditions. Notable along this line are the arrangements for substantial yearly loans to finance cotton exports under which normal marketing and banking channels are employed to the utmost.

We sell loans from our portfolio to banks, thereby freeing our resources. We are constantly working with private banks and this past year have entered into preliminary negotiations with certain insurance companies. Contrary to the opinion of some uninformed, our portfolio is very definitley for sale. We are grateful for the continued assistance and support of United States private banks.

It should be emphasized that Export-Import Bank loans, with very minor exceptions, support our private enterprise economy here at home in the most direct sense in that our loans finance the output of our own firms, our own farms and factories. It is unlikely that there is a single town or county of any size in the United States whose production and payrolls are not at some time directly aided by exports of manufactured goods or farm products financed through the Export-Import Bank. Although they may not even have been aware of our assistance, some of our largest heavy equipment loans reach out to many hundreds of firms throughout the United States.

Let me give you a few figures and comments now, to substantiate the nature and scope of the bank's operations.

During the fiscal year 1957, the bank authorized 182 new credits in 36 countries totalling $1,066 million. Of these credits, 155 were made to private borrowers for a total of $233 million. Twenty-seven loans, totalling $833 million, were made to governments or government agencies. As for the total investment made possible by Export-Import Bank loans, the current period confirms past studies in showing that our development credits work in partnership with investment by others totaling about 150 percent more than the amount of our loans.

It is appropriate first to point out that every bank, consciously or not, is more than just an institution to make money for its stockholders. Every bank, in greater or lesser degree, fulfills a function in serving the needs of its community. When a bank succeeds fully, it succeeds through serving its borrowers by appraising the risks of enterprises and the capacity of their managers, and through advice and, if you will, technical assistance to enterprisers.

The Export-Import Bank has tried in this manner to be a sound bank, serving always the interests of its stockholders—the taxpayers of the United States, but also those of the community it serves, which is simply the community of free nations. As a Government foreign lending institution, our responsibility is particularly great and our awareness highly sensitive regarding the obligation to protect and serve both the interests of our borrowers and those of the United States.

When we make a loan in a foreign country, the economic interest of that country is considered along with that of the United States. That is not sheer altruism, but itself sound business. We are at all times concerned that the operation itself and the overall economy of the country will be able to repay the loan. But particularly as a Government institution, dealing with foreign enterprises or their governments, we do more than to limit our decisions to the creditworthiness of the borrower. Beyond this, we must appraise the effect of the loan on the whole delicate complex of our economic relations with our foreign friends.

To this end, the bank must concern itself with the entire present and prospective position of the other country's economy. We must be informed about the other country's investment potentials and proposals, and with the policies chosen to stimulate orderly investment in all fields, private and public. We never encourage people to borrow beyond their ability to pay. We do not want to create future problems for the United States by assisting even the most eager underdeveloped countries to assume unwise heavy burdens of dollar debts. As a Government institution we must also be particularly careful to avoid any element of unwarrantable interference in the affairs of our sovereign friends.

To do this job properly, we try to earn the good will and confidence of our borrowers and of official circles in foreign countries. We attempt to earn confidence through understanding of their problems and points of view, through consultation and advice, and ultimately through participating with them in achieving real results in the development of their countries.

All of our basic work is done in Washington, and this includes extensive consultation with applicants or their technical representatives. However, we do a great deal of our work on the spot in the field. During the last fiscal year our directors and staff members visited 36 countries to make field studies of pending applications or to inspect loans already made. Many of these trips involved teams of two or more men, and some countries were visited more than once.

To establish confidence is a joint effort and we at all times endeavor to maintain close and friendly cooperative relations with United States industry. Through our association over many years, we enjoy the assistance of the best brains in American industry and banking on technical, financial, and management problems.

The importance of our development banking is, of course, greatest for the fast-growing, ambitious less-developed areas of the world. These countries are eager for assistance in improving and diversifying their economies, in order to increase their productivity and their national income. Although our largest single loans have been to Europe—for immediate postwar needs and to meet the Suez crisis—about 60 percent of our outstanding authorizations are for countries in Africa, Asia, and Latin America. While the bank is best known for our work in Latin America, where we now have $2.25 billion in loans authorized, we have nearly $1 billion authorized to countries in Asia.

Our Latin American loans are probably the clearest example of the coordination previously mentioned. This is because of our long and intimate association with Latin American governments, private investors and traders, and with our own traders, investors, and bankers concerned with that area. It takes time for many loans to give full evidence of their worth to a country. Their value may start immediately after a factory door is opened or a switch is thrown. It becomes more evident as men are employed, costs lowered, products are sold, income earned, and profits made and reinvested. But that is only part of the story.

The truly fundamental results occur as more and more people are trained, as managerial and technical skills are acquired and made available to other parts of the economy, as standards of performance are raised, as new firms are started based on these greater skills and higher standards, in short, as the market economy broadens and deepens. Socially, a middle class grows whose ways of thinking are more and more like our own, a development that assists countries to be more skillful, independent members of the free world. And there is ground to believe that these social and economic developments enable and encourage the people of the country to select and support leaders who favor stable and progressive economic and political policies.

That our activities loom so much greater for Latin America is not simply an accident. Our large scale operations in that area are the natural result of our close relations with our neighbors of this hemisphere. Our large European loans in 1945–46 were to finance the reconstruction needs of that continent immediately at the end of the war. Our postwar loans to several Asian countries, on the other hand, reflect new opportunities and needs for investment which were in our mutual interest. Wherever the changing circumstances of world affairs and economic development have enabled loans to be made, Export-Import Bank activity has increased. If Congress increases our lending authority, we believe this will hold equally true for the future.

The bank's semiannual report will be filed as soon as it is received from the Government Printer. We would like at this time to summarize briefly our financial operations.

During its 24 years' history the bank has authorized loans totaling $9 billion. About $1.6 billion was not used because of cancellations or because we were able to have the commitments taken over by private lenders, and in certain instances sales were made for cash after loan authorizations had been granted. The bank has disbursed about $6 billion, and almost exactly $2 billion of this has been repaid.

We now have on our books loans and authorizations in 59 countries totaling $4.4 billion. Since our legislation permits us to lend a maximum of $5 billion, we have remaining an unused lending authority today of approximately $500 million.

Our lending activity during the last 18 months has been at a peak. Loans authorized last fiscal year totaled $1,066,000,000. During the first 6 months of this fiscal year, we authorized $468 million in new loans.

On the other hand, the bank will have repayments coming in, as well as some cancellations and direct participations by private capital, at an estimated annual rate of about $500 million. But with new operations on the present considerable larger scale, it would only be a few months before the bank would be required to reduce its lending drastically, if not given increased lending authority.

This is true immediately if we are to maintain one of our most basic policies. In the opinion of the directors, the bank should

always retain an uncommitted lending authority of several hundred million dollars in order to have resources to meet unexpected emergencies that may confront the United States in the international field.

For these reasons the President has proposed that the bank's authority to lend be increased from $5 billion to $7 billion, and that our power to borrow from the Treasury be correspondingly increased. As you know, our activities have been conducted by means of borrowing our funds from the Treasury, and then in effect relending these funds.

The bank's gross earnings since it was established total $867 million. From these earnings we have paid all of our administrative expenses, and met some small losses. Congress does not appropriate new funds for the bank's expenses for the bank has always been self-supporting. The procedure has been for Congress to approve a budget for the bank, which then meets all expenses and charges from its own earnings. Our annual administrative expenses for the past 24 years average 1.7 percent of our annual income.

From earnings, payments have been made to the Treasury of more than $200 million in interest on funds borrowed, and in addition $173 million has been paid in dividends on our capital stock, all of which is held by the Treasury. To this extent we make a contribution to the Treasury's operations.

After paying, from earnings, all expenses, interest on borrowed money, and dividends on capital stock, there remains accumulated reserves of $475 million. These reserves now equal about 10 percent of our authorized loans or 15 percent of our outstanding loan funds paid out. The bank's primary objective has not been to make money for its stockholders, but it is good banking and business judgment that adequate reserves be maintained in proportion to loans outstanding.

The officers and staff of the bank have an average of 26 years of experience, either in the bank itself or in work which was direct background for their present assignments.

The bank has been made available for other services than the administration of our own operations. The bank also acts as administrative agent for certain loans of the United States Government, the Department of Defense, and the Office of Defense Mobilization, as well as loans for the TCA, and the ICA and its predecessor agencies. These loans amount to an additional $3.3 billion for a combined responsibility by the bank at the present time of $7.8 billion. An additional activity was assumed last summer under the so-called Cooley amendment to the Agricultural Trade Development and Assistance Act of 1954 (Public Law 480). We are now beginning to make certain types of loans to American and foreign private businessmen out of foreign currencies received from the sale of agricultural surpluses. And in accordance with the direction of the Congress we are prepared to administer the Development Loan Fund credits in the same manner that the more than $3 billion ICA credits are being serviced.

It has been my purpose to report briefly to your committee. There is much yet to be accomplished by the Export-Import Bank as our Government's foreign lending institution. It is important for all concerned, here and abroad, and important that it be made clear that extension of credit is a business operation, based on good prospects for economic gain to the borrowers and to be repaid by the borrowers. To be sure, international finance can never be free from consideration of implications of foreign relations. But it should always be founded on the understanding by all that credit assists economically useful investment, and that a credit transaction represents a judgment of mutual benefits to both the lender and the borrower.

It is on these basic conceptions of the bank's continued role in foreign policy that we respectfully request committee approval of S. 3149 to increase the lending power of the Export-Import Bank by $2 billion. It is in this spirit that the Board of Directors would continue to administer the authority given to it by Congress as a bipartisan independent agency of the United States Government.

The United States Inter-American Council

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, March 10, 1958

Mr. WILEY. Mr. President, I have previously invited the attention of my colleagues to the fine contribution made by the United States-International American Council.

Probably no other private enterprise organization has contributed so much to inter-American cooperation in the inter-American field.

Dating back to its birth in 1941, the council has rendered yoeman services as a spearhead, and as a spokesman, of trade and friendship within the Western Hemisphere.

Represented on the council are some of the outstanding businesses in the United States; trading with the 20 Republics to the south.

The businessmen on the council deal 365 days a year with the practical problems of smoothing out and making ever more beneficial the two-way flow of trade.

With a slump in our own American market here at home, the problems of this two-way trade grow more complex. On the one hand, American businesses naturally seek to expand foreign trade so as to take up the slack in the American market.

On the other hand, our Latin American friends find it increasingly difficult to buy more of our goods because their own purchasing power declines as our purchase of their goods drops.

Despite this, and other problems, I am certain that in the decade ahead there will be, as all the evidence indicates, a tremendous increase in the Latin American market as a customer and as a supplier of American goods.

I earnestly hope that in the lands to the south there will be an ever-improved climate for American investment.

I hope that there will be a diminishing of anti-American sentiment which is found in some places. I hope that there will be an increasing recognition of the need for mutual respect, mutual cooperation, and mutual strengthening of ties.

I send to the desk excerpts from the February 1958 issue of the Inter-American Bulletin, together with excerpts from an important address by Mr. H. W. Balgooyen, executive vice president of the American & Foreign Power Co., the new chairman of the Inter-American Council, as delivered at the council's annual meeting in New Orleans, in mid-December. I ask unanimous consent that both items be printed in the Appendix of the RECORD.

There being no objection, the excerpts and address were ordered to be printed in the RECORD, as follows:

USIAC ANNUAL MEETING HELD IN NEW ORLEANS, DECEMBER 16

The annual meeting of the USIAC was held at the International House, New Orleans, December 16, 1957. It was the first in a series of general meetings for members to be held four times yearly as part of the expanded and strengthened USIAC program. Harry X. Kelly, president, Mississippi Shipping Co., served as host jointly with International House and the city of New Orleans.

The business part of the meeting included reports by officers and committees, and election of officers and trustees for 1958. Dr. Richard P. Momsen, USIAC advisory board member from Brazil, led an informal discussion on the current situation and outlook in that country; and William A. Melvin, USIAC advisory board member from Uruguay, reported on conditions there. Both replied to questions following their talks.

At luncheon following the meeting, Roy A. Rubottom, Assistant Secretary of State for Inter-American Affairs, discussed matters of current interest in a brief off-the-record talk. H. W. Balgooyen, USIAC chairman-elect, spoke on the role of the Inter-American Council in preserving and promoting free private enterprise in the Western Hemisphere and current issues facing American and Latin-American business. A copy of his remarks accompanies this issue.

USIAC TRUSTEES FOR 1958 ELECTED

The following trustees were elected to office in 1958 at the USIAC annual meeting December 16: Edward Adams, Jr., Sam G. Baggett, Edgar R. Baker, H. W. Balgooyen, Erwin Balluder, William E. Barlow, Charles E. Beard, Howard Bird, Jr., Henry D. Bixby, Jr., S. Bruce Black, Richard L. Bowditch, Spruille Braden, W. D. Bradford, Meade Brunet, Thomas A. Campbell, Horance M. Chadsey, Philip Cortney, H. A. Davies, John A. Diemand, Fred M. Farwell, E. W. Faulk, Amos B. Foy, Lewis B. Harder, Walter Harnischfeger, George P. Harrington, W. R. Herod, Henry F. Holland, R. A. Hummel, Walter Hunnewell, Jr., R. C. Ingersoll, Carl N. Jacobs, and John K. Jenney.

Also: R. C. Joubert, Nicholas Kelley, Jr., Harry X. Kelly, James S. Kemper, William E. Knox, Otto T. Kreuser, Charles Henry Lee, August Maffry (transferred on January 21 to Jean D. Zutter), Frank T. Magennis, S. Maurice McAshan, Jr., G. A. Meckes, Charles A. Meyer, Kenneth R. Miller, Frank R. Milliken, John D. J. Moore, William T. Moore, Robert H. Morse, Jr., J. Warren Nystrom, Howard M. Packard, Herbert V. Prochnow, Webster Pullen, Henry A. J. Ralph, Noel Sargent, Herbert H. Schell, Andrew B. Shea, A. Thomas Taylor, Arthur K. Watson, Leo D. Welch, H. Harold Whitman, and William S. Youngman, Jr.

USIAC OFFICERS AND COMMITTEES NAMED FOR 1958

At the annual meeting of the USIAC December 16, the following officers were elected for 1958: H. W. Balgooyen, chairman; Charles A. Meyer, senior vice chairman; R. A. Hummel, Harry X. Kelly, John D. J. Moore, and H. Harold Whitman, vice chairmen; Kenneth H. Campbell, treasurer; Vada Horsch, secretary; and William F. Combs, executive director.

The following committees were named: Executive committee, membership committee, finance committee, editorial committee,

committee on combating statism, program and social committee.

USIAC WELCOMES 13 NEW MEMBERS AND 1 REENROLLMENT

The USIAC takes pleasure in welcoming 13 new members who have joined in 1957 and 1958 to date, and 1 former member who returned to its ranks. The members, and the individual exercising membership for each, are as follows:

Booz-Allen and Hamilton International, Ltd.; Ralph E. Smiley, president.

Combusion Engineering, Inc.; George M. Chambers, manager, nuclear division.

The Ecuadorian Corp., Ltd.; Forrest L. Yoder, president.

Haskins and Sells; J. Harry Williams, partner.

Home Products International, Ltd.; Eric K. Pfau, president.

Hughes Tool Co.; M. E. Montrose, vice president, sales.

Interamerican Capital Corp.; Fredric J. Evans, president.

Johnson & Johnson International; Robert J. Dixson, president and chairman.

Lehman Brothers; Marcel A. Palmaro, general partner and head of foreign department.

McGraw-Hill Publishing Co., Inc.; Nelson Bond, president, McGraw-Hill International Corp.

Momsen and Freeman; Joseph S. Cardinale, partner.

Roberts and Holland; Henry F. Holland, partner, Union Carbide International Co.; George C. Wells, president, John Wood Co.; Guy George Gabrielson, chairman of the board.

ECUADORIAN SECTION OF IACCP REESTABLISHED

The Ecuadorian section of the IACCP was reorganized and reestablished in a meeting of representatives of the chambers of commerce, industry, and agriculture affiliated with the IACCP in Ecuador, November 25, 1957. Officers, elected for the ensuing 3 years, are: Dr. César D. Andrade, president; Guillermo Tola Carbo, Rafael Lasso Meneses, Juan José Plaza, and Carlos Merello Guzmán, vice presidents; and Lic. Reinaldo Cañizares Palacios, secretary-manager.

EIGHTH PLENARY SESSION OF IACCP LAST JULY AN OUTSTANDING SUCCESS

The eighth plenary session of the IACCP, held last July in Buenos Aires, was in many respects the most successful to date. The climate surrounding the proceedings was vigorous and enthusiastic, and completely cordial. The final resolutions and recommendations were the strongest and best to come out of any plenary meeting thus far. These resolutions, representing the consensus of private businessmen and free enterprise throughout the hemisphere, were presented at the meeting of the OAS, a month later. Copies are available on request, while the supply lasts.

ECLA GROUP TO EXPLORE COMMON MARKET FOR LATIN AMERICA

General news

Six prominent Latin Americans, appointed by the Economic Commission for Latin America to consider ways of creating a Latin American common market, held their first meeting this month in Santiago, Chile. The group comprises José Garrido Torres, president of the National Economic Council of Brazil; Rodrigo Gómez, director of the Bank of Mexico; Flavian Levine, manager of the Cía. de Acero del Pacífico, of Chile; Eustáquio Méndes Delfino, president of the Bolsa de Comercio of Buenos Aires; Galo Plaza, former President of Ecuador; and Joaquín Vallejo, former Minister of Development of Colombia.

INTER-AMERICAN BAR FOUNDATION ESTABLISHED

The 10th plenary session of the Inter-American Bar Association in Buenos Aires, last November, established an Inter-American Bar Foundation to bring about greater understanding among lawyers in the Western Hemisphere, where 21 different legal systems are used. Officers elected are: Roy W. Johns, of Philadelphia, director of several oil and pipeline companies operating in Latin America, president; Dr. Eduardo García, of Argentina, recently elected president of the OAS, vice president; William Roy Vallance, of Washington, secretary; and Charles Norberg, of Washington, treasurer. Directors include Henry F. Holland, former Assistant Secretary of State for Inter-American Affairs; Mary H. C. Zimmerman, of Detroit, former president, National Association of Women Lawyers; Edwin D. Ford, Jr., attorney for American & Foreign Power Co., Inc., New York; and Cody Fowler, of Miami, former president of the American Bar Association.

REPORT ON INFLATION IN LATIN AMERICA

In the latest issue of Latin-American Business Highlights, the Chase Manhattan Bank reports that while 7 Latin American republics have had less inflation than the United States, prices have risen by more than 50 percent in the other 13. In 9 of these countries the cost of living has more than doubled; and in 3 cases it has shot up more than 25 times. Various aspects and contributing causes of inflation are analyzed, with charts.

ARGENTINA ACTS TO EASE UNITED STATES MACHINERY IMPORTS

New measures making it easier to import United States industrial machinery into Argentina have been implemented by the Central Bank of Argentina. A wide range of tooling and production equipment in various broadly described classes as to type of machinery and industry of application already is covered, and other industries are to follow as soon as the balance of payments position permits.

Procedure provides for importing machinery either as capital investment with repatriation, or on time payments. Detailed provisions relating to both types of import were set forth in announcement by the Ministry of Treasury in the Journal of Commerce, November 16, 1957.

* * * * *

BRAZIL ENCOURAGES MANUFACTURE OF TRACTORS

Brazil has invited private firms to submit offers to manufacture tractors, under rules somewhat similar to those already laid down for truck producers. After the first year, tractors or implements must contain at least 30 percent of locally made parts, and by 1963 this must be upped to 90 percent. The Government will determine production types and quotas.

FOREIGN INVESTMENTS FORMED IN BRAZIL

The National Confederation of Commerce in Brazil has approved establishment of a council on foreign capital investments, to study and promote foreign investments for industrial development of the country.

UNITED STATES CHILEAN COPPER INVESTMENTS REACH $130 MILLION

United States copper investments in Chile in 1955, 1956, and the first half of 1957 were more than $129.5 million; with $122.7 million in new investments by Anaconda and $6.8 million by Braden, according to the United States Department of Commerce and the Foreign Investment Committee in Chile. Since Chile's Foreign Investment Law of 1954, the United States has been the leading investor with $11.4 million, or nearly 25 percent, of a total of $46 million of foreign investments in industries other than copper.

KENAF SEEN AS POTENTIAL AID TO CUBAN ECONOMY

A major new industry could be developed in Cuba if efforts are made to develop kenaf, according to a report prepared by Stanford Research Institute for Cia. Cubana de Electricidad, an affiliate of American & Foreign Power. Kenaf, a soft tropical fiber, is said to be usable as a substitute for jute in sacking, and in many industrial fiber applications.

UNITED STATES AND MEXICO SIGN LOAN AGREEMENT

The United States and Mexico have entered into an agreement whereby local currency equivalent to $13.6 million will be made available for economic development, according to ICA announcement. Pesos involved represent partial local currency proceeds of sales of agricultural commodities under Public Law 480.

CHRYSLER TO MANUFACTURE PLYMOUTH-SAVOY AUTOS IN BRAZIL

News of companies and people

In the second half of 1958 Chrysler will start manufacture of the Plymouth-Savoy auto in Brazil. The plant will be the largest of its kind in Brazil, with total investments of $60 million. Annual production of 6,000 cars is planned.

IT&T MAPS CHILEAN PHONE EXPANSION

A $35.3 million, 6-year expansion program for Chile's telephone system is under negotiation between Cía. de Teléfonos de Chile, subsidiary of IT&T, and the Chilean Government.

SEARS, ROEBUCK OPENS SIXTH RETAIL STORE IN COLOMBIA

Sears, Roebuck de Colombia recently opened its sixth retail store in Medellín. It is housed in a $1 million building, on a lot of 5½ acres. Merchandise includes some 10,000 items, of which 93 percent are produced in Colombia. Of 320 store employees, only 3 are United States citizens. The store's expansion program includes plans for a supermarket.

GRACE LAUNCHES SECOND $25 MILLION LINER

The *Santa Paula*, second $25 million passenger liner of the Grace Line, was launched in mid-January. It and its sister ship, the *Santa Rosa*, will enter the company's service linking New York, the Caribbean, and South America, this year.

NEW PUERTO RICAN SUBSIDIARY FORMED BY GRACE

W. R. Grace & Co. has announced formation of International Metalloids, a subsidiary of Grace International, S. A., to produce semiconductor-grade silicon in Puerto Rico.

* * * * *

HARNISCHFEGER TO BUILD CRANES AND SHOVELS IN BRAZIL

Harnischfeger International Corp., in association with Equipamentos Industriais Villares of São Paulo, gives Brazil its first construction equipment industry. A new plant will begin production of Brazilian P & H power cranes and shovels early in 1958.

INTERNATIONAL PACKERS TO MODERNIZE PLANT IN ARGENTINA

Plans to modernize Swift de la Plata's plant in Argentina to increase exports of corned beef and other canned meat to the United States were revealed recently by International Packers. The firm will invest $1 million in high-speed packing machinery.

ALLIS-CHALMERS ACQUIRES TRANSFORMER COMPANY IN MEXICO

Allis-Chalmers de México, S. A., has acquired Industrial Dufermex, S. A., of Mexico, D. F., which previously had operated as a licensee for production and distribution of Allis-Chalmers power transformers. The parent company will continue to manufacture transformers at the Mexican plant and hopes to expand its line.

NEW $26 MILLION LINER "BRASIL" LAUNCHED BY MOORE-M'CORMACK

The *Brasil*, first major United States liner built for service to the east coast of

South America in more than 50 years, was launched by Moore-McCormack Lines in mid-December. The $26 million liner will ply between New York and Brazil, Argentina, and Uruguay.

REMINGTON RAND OPENS TYPEWRITER PLANT IN BRAZIL

Remington Rand, celebrating the 50th anniversary of its activities in Brazil, opened the first plant in Brazil for manufacture of typewriters on October 28. President Kubitschek of Brazil joined President A. H. Gutsch of Remington Rand in the inauguration ceremonies. The plant employs 1,200.

FORD TO INVEST $21 MILLION TO EXPAND IN BRAZIL

Ford Motor Co. has appropriated $21 million to expand its facilities in Brazil. Built in 1953, they are still among the world's most modern. Producing trucks with an ever-increasing percentage of Brazilian parts, plans call for output of 30,000 commercial vehicles annually by 1960, with 90 percent of components by weight, including the motor, of Brazilian manufacture.

HOWARD M. PACKARD NAMED PRESIDENT AT S. C. JOHNSON & SON

Election of Howard M. Packard as president and chief operating officer at S. C. Johnson & Son, Inc., was announced January 16 by the company. Mr. Packard, formerly executive vice president, succeeds Herbert F. Johnson, who has been president since 1928 and now continues as chairman and chief executive officer.

RETIRING USIAC CHAIRMAN H. A. DAVIES RECEIVES TRIBUTES

Appreciation of USIAC members for the leadership and services of Hugh A. Davies, retiring chairman, were expressed in a letter which Mr. Balgooyen, as senior vice chairman, wrote to John L. McCaffrey, chairman, International Harvester Co., December 11. The letter, and a telegram in reply from Mr. McCaffrey, were read at the annual meeting. In another tribute by the city of New Orleans, Mayor Morrison presented Mr. Davies with a gold key to the city of New Orleans.

LATIN AMERICA SEEN AS CONTINENT IN FERMENT

Books, publications, speeches

"Borne onward by the force of fast-growing industrialization, Latin Americans are pulling free of old traditions to become a rising new culture on the horizon of the rest of the world."

With this introduction, Robert M. Hallett, Latin-American editor of the Christian Science Monitor, in an extensive article January 13, discusses what he sees as two fundamental and conflicting forces dominating Latin America today: On one hand, "The Iberian background of most of those in the upper classes with its emphasis on culture and leisurely, gracious living * * *"; and on the other, "the rather frenetic minute-conscious industrial age imported from abroad, mostly the United States. * * *" He concludes: "With Latin America growing faster in population than any other part of the world and playing a larger economic role, it is increasingly important for the rest of the world to understand this rising new culture. * * * It is bound to play an ever more important role on the world stage."

NEW USDC REPORT ON UNITED STATES INVESTMENTS IN LATIN AMERICA

United States Investments in the Latin American Economy, by the United States Department of Commerce (194 pp.; $1.75 from Superintendent of Documents) is the final version of the summary report issued last year on the direct economic contribution to Latin America through operations of United States companies and private investors.

RADFORD CALLS STEPUP IN AMERICAN FOREIGN INVESTMENTS VITAL

One example of continuing interest in this topic is the remarks of Adm. Arthur W. Radford before the annual meeting of stockholders of the Bankers Trust Co. of New York. He said that American private foreign investment, recently around a $4 billion gross rate, must be doubled or tripled. He went on to say that private enterprise holds the key to the free world, depending on brains and management skill and private rather than Government enterprise.

USIAC PUBLICATION ON UNITED STATES INVESTMENTS IN LATIN AMERICA

The USIAC booklet The Profitable Partnership, based on summary findings of the USDC study released last year, already is proving an important means of counteracting the erroneous impression that foreign investment is burdensome to the host country. Single copies will be sent free on request. Larger quantities will be furnished at $30 per 100 copies, plus delivery charges and applicable taxes, while the supply lasts. Please specify English, Spanish, or Portuguese edition when ordering.

THE INTER-AMERICAN COUNCIL—ITS PAST RECORD AND FUTURE RESPONSIBILITIES

(Presented by H. W. Balgooyen, executive vice president, American & Foreign Power Co., Inc., and chairman-elect, United States Inter-American Council, at the annual meeting of the United States Inter-American Council, New Orleans, La., December 16, 1957)

I believe that the most important function of the IAC is to serve as a liaison between the businessmen, and, in case of need, the governments of Latin America and the United States, respectively. The USIAC, for its part, should strive to keep the United States Government and the American public continuously informed as to the attitudes, the requirements and the aspirations of our counterparts in Latin America, just as the various national sections in Latin America should keep their governments and peoples informed regarding the requirements and objectives of United States business enterprise. Our first concern in the USIAC, therefore, should be the development in this country of an informed public opinion concerning Latin America, aware of its primary importance as a business partner in time of peace, and an indispensable supplier and ally in time of war or national emergency.

It would be a waste of my time and yours to recite foreign trade statistics to a group as well informed as this one. We all know that Latin America is the most important source of United States imports—particularly essential raw materials—and is the chief recipient of our foreign investments. These are tangible facts of our economic life. Not so tangible, but nonetheless real, are the ideological and spiritual ties that bind us to the peoples of Latin America.

In a recent speech, one of our esteemed trustees, the Honorable Spruille Braden, commented on the essential solidarity of the Americas and the reasons for it. He then made the very significant statement that this solidarity of our peoples, based on dignity, freedom, and mutual respect, makes us the only nation on the face of the globe that, in an emergency, may have full trust and confidence in one another. I believe that this is well worth pondering. Certainly, we should retain and strengthen our alliances with nations of the Old World; but, within the short span of a generation, we have seen several of our friends transformed into enemies and our enemies changed into friends. I hope and believe that some of our present allies will stand by us when the chips are down, despite their large Communist and Socialist Parties and the shrunken shorelines of our reservoirs of good will. But, I have no doubt whatever as to the stand which will be taken by our Latin American friends if and when the final showdown comes between the forces of communism and freedom. They will be on our side—not because it is the side of the biggest pocketbook, the most powerful missiles or the largest battalions, but because they share our devotion to the Christian ethic of individual dignity and worth, and our faith in the ultimate triumph of right and justice.

I am sure that all of us who know Latin America believe this very sincerely, but we have not done a very effective job in conveying to the American press, to the public, or to our Government officials, an appreciation of the overriding importance of maintaining and strengthening our inter-American relationships. I have said that, in the worldwide struggle between the forces of communism and those of freedom, our Latin American friends will be among our most dependable allies—and this will be true whether in time of prosperity or adversity; whether or not there exists a full measure of mutual understanding among us. But, strong allies are better than weak allies, and understanding friends are better than friends of circumstance or necessity. At the present time, unfortunately, many of our southern neighbors are economically weak, and they are struggling with economic ills that threaten to get more serious before they get better. Furthermore, there are a number of points of friction between them and us which will not be easy to eliminate but will require a great deal of patient effort at mutual understanding.

The USIAC can perform no more useful function than to help awaken the American people to the importance of their inter-American ties, acquaint them with the nature of Latin America's economic problems and of their attitudes toward our economic policies, and thus create the atmosphere of mutual understanding which will lead to a more satisfactory relationship.

* * * * *

All of us have faith in the long-term future of Latin America, but the Good Book tells us that faith without works is dead—dead as Maynard Keynes says that we all will be in the long run. The next 2 years will be critical ones for Latin America; how critical will depend largely on the condition of our own economy. It has been said that a sneeze in the United States can cause pneumonia in Latin America. I am one of a number of Americans who have done considerable sneezing during the flu epidemic and I'm afraid that our national economy has developed some similar respiratory symptoms. I hope that we can cure them rapidly and restore the traditional vigor of our free enterprise economy; but for our own sake and theirs, let's try to avoid trade policies that will result in exporting our ailments to our Latin American friends.

National Full Employment Conference

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 10, 1958

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a letter and resolution from the UAW International Union, relating to full employment.

There being no objection, the letter and resolution were ordered to be printed in the RECORD, as follows:

UAW WASHINGTON OFFICE,
Washington, D. C., March 6, 1958.

The Honorable WILLIAM LANGER,
Senate Office Building,
Washington, D. C.

DEAR SENATOR LANGER: We enclose our resolution on full employment adopted by the 3,000 democratically elected delegates who attended the UAW special convention held in Detroit, January 22–24, 1958. You will note that the resolution calls on President Eisenhower to convene a national full employment conference. He has received and rejected this suggestion.

Many regional conferences have been held throughout the country urging immediate action to meet the critical unemployment problem. On March 11, 12 and 13, the AFL–CIO will hold a full employment conference in Washington, D. C., for the purpose of bringing conditions in various parts of the country to the attention of Members of Congress.

As you will note, the UAW resolutions set forth specific proposals for Federal, State, and local action. Your consideration will be appreciated as will any questions or comments you may make.

Sincerely yours,

PAUL SIFTON,
Legislative Representative, UAW
International Union.

RESOLUTION ADOPTED BY UAW SPECIAL CONVENTION JANUARY 22, 23, 24, 1958, DETROIT, MICH., BY 3,000 DEMOCRATICALLY ELECTED DELEGATES REPRESENTING 1,500,000 MEMBERS

FULL EMPLOYMENT

Whereas the free world must fully grasp the dimensions of the world challenge and translate such understanding into bold action on the economic, scientific, and educational fronts. The Soviet Union has achieved leadership in the area of missile technology and other critical scientific fields and is now devoting increased attention to programs of economic penetration and political subversion of the uncommitted peoples in the economically underdeveloped nations, at the very time when both the United States and Canadian economies are limping along and are involved in a deepening recession.

Mass unemployment and underutilization of our productive capacity is dissipating our economic strength at the very time that freedom's margin of survival is narrow and precarious.

A mounting number of UAW members and their families in the United States and Canada are now suffering the hardships and indignities of job loss, idleness, and short workweeks. In the current slump, as always, working people and their dependents are bearing the brunt of an economic decline caused by the greed of corporate management and the shortsightedness of Government administrators.

This is no time for complacency or self-assurance. This is a time for vigorous action to get idle workers and idle machines back to work, to turn out the increased production needed to meet our unfilled human needs at home, and to meet the challenge on the world front. Halfway and halfhearted measures and policies of too little and too late will not get the job done. We must raise our sights and show as much courage, imagination, and good sense in this crisis as we did after Pearl Harbor. We have lost ground not because the Russians are better but rather because we have not been trying, because we have not been fully mobilizing our economic and productive power.

As a nation, we need to raise our sights, to get our values in sharper focus, and to work out a set of national priorities that will put first things first. We need to strengthen our military posture. We need to overcome our lag in the field of education. We need to expand basic scientific research. We need to do all of these things but we need to do more. We need to raise living standards at home and we need to aid the underprivileged peoples of the world to mobilize their economic resources so that they, too, can share in higher living standards and can successfully resist the Soviet Union's programs of economic penetration and political subversion.

These are the positive aspects of freedom's struggle against the forces of Communist tyranny. We need to understand that, in the long pull, military power alone will not decide the contest between the forces of freedom and the forces of tyranny. In the long run, the cause of human freedom will win provided we prove that freemen under free government working together within a free economic system can do a better job of raising living standards, of broadening educational opportunities, of providing our older citizens with a fuller measure of economic security and human dignity, of gearing our developing technology and our increasing abundance to human progress and to the fulfillment of the higher aspirations of human civilization.

In short, we must mobilize our economic resources so as to deter the peril of war, while at the same time, we must work to realize the promise of peace.

We cannot get on with this job unless the national administration meets its responsibilities under the Employment Act of 1946 which obligates the Government to formulate policies and take the necessary action to maintain maximum employment, production, and purchasing power in the national economy.

The Federal Government is further obligated to alleviate the present distress of workers and to initiate measures which will put them rapidly back to work because administration tax and fiscal policies were important causes of our immediate economic predicament.

The tight-money policies of the Eisenhower administration, its policy of favoring high-income over low-income groups in the distribution of the tax burden, and its other economic policies reflecting the undue influence of big business, slowed national economic growth, widened the gap between our capacity to produce and our power to consume, and thus set the stage for recession.

Similar policies were applied in Canada with inevitably similar consequences.

The dynamic balance between production and consumption necessary for full employment in a growing economy was undermined further by the actions of giant corporations occupying monopoly positions in vital sectors of the economy which have abused their power by raising prices arbitrarily and unjustifiably in defiance of the law of supply and demand.

The UAW foresaw the consequences of the unsound and selfish economic policies of the admiration and big business and warned that they were leading to recession. Unfortunately our warnings went unheeded and recession is no longer a future danger but a present fact.

Past experience shows the folly of allowing events to run their course. Left to its own devices, it is clear that the Eisenhower administration, under the guidance of its big business policymakers, will shuttle between indifference to the fate of the unemployed and measures, such as the cut in required stock margins, designed to make speculators happy. Measures to stimulate the stock market, or applications of the trickle-down theory under which the wealthy are further enriched in the hope that they will increase their investments would be not only futile but dangerous under present conditions. Our first and most urgent problem now is not to foster investment but to replenish the wells of purchasing power drying up under the curse of joblessness.

At the same conference at which President Eisenhower announced his do-nothing policy, he indicated that his optimistic indifference to the immediate plight of workers had been inspired by reports from a whole series of bankers. The President is badly in need of reports from a whole series of workers and from a whole series of States and local communities where a deficiency of paychecks is causing a run on unemployment compensation funds, evictions, loss of homes, a lengthening of relief rolls, and local depressions for small merchants and professional groups: Now, therefore, be it

Resolved, That UAW call upon the President of the United States to convene a national full employment conference of labor, management, farm, consumer, and other economic groups, and the governors from the States and the mayors from the industrial cities where unemployment is most acute, to review the present economic situation, hear reports and recommendations from these groups and from the Government, and lay the basis for a comprehensive full employment program; and be it

Further resolved, That the UAW supports the following program of action at the Federal, State, and local levels to meet the immediate recession emergency and to lay the groundwork for future steady progress toward increasing living standards and greater national security based upon an expanding full-production full-employment economy.

FEDERAL GOVERNMENT ACTION—SHORT-TERM PROGRAM

The object of the short-term measures of the employment program must be to assure immediate help to those currently suffering hardship, and to create new jobs as quickly as possible. Such measures will not merely help relieve immediate problems but can be used to meet similar situations in the future, and in addition some of them will provide a substantial cushion to protect the economy against spiraling recessions, which tend to grow from the losses of purchasing power suffered by laid-off workers.

Unemployment insurance

(a) Immediate action by Congress to enact minimum Federal standards of unemployment compensation to assure that all States will provide adequate unemployment compensation benefits and duration and reasonable eligibility requirements, including a provision to permit the operation of SUB agreements in the few States where supplementation of State benefits is now blocked.

(b) Provision for Federal supplementation of State benefits until the States have had time to bring their laws into conformity with the minimum Federal standards.

Moratorium on home mortgages for laid-off workers

Legislation to protect laid-off workers unable to make payments on home mortgages by a Federal moratorium for the period of their involuntary unemployment.

Taxes

(a) Consumer purchasing power should be stimulated by increasing personal income tax exemptions from the current $600 to a minimum of $800. This will be immediately reflected in higher take-home paychecks due to reduced withholding taxes. It will enable low- and middle-income families to increase their spending thus providing employment. It will provide large families with the most dependents with the most help.

(b) Remove excise taxes on automobiles, appliances, and certain other goods to enable more consumers to buy such items.

(c) Plug tax loopholes in order to make up revenue losses resulting from the above tax reforms. Included among such loopholes are dividend exemption, oil depletion, capital gains, split income, among others, which en-

able the wealthy to escape their fair share of the tax burden.

Defense contracts

Telescope production schedules on defense contracts currently in production in distressed areas to provide maximum employment with a minimum of delay.

Current public construction

Construction schedules on public works in distressed areas for which contracts have already been let should be telescoped to provide maximum employment opportunities immediately. Other projects planned for such areas should be gotten underway with a minimum of delay.

FEDERAL GOVERNMENT ACTION—LONG-RANGE STABILITY PROGRAM

It is not sufficient to concern ourselves only with the immediate crisis. There are numerous measures which should be undertaken with a view to strengthening the economy and helping to prevent a repetition of similar unemployment crises in the future, as well as policies designed to insure swifter and more effective action if unemployment should threaten. Some of these measures, if put into effect immediately, could also be of substantial help in reducing present unemployment.

Industrial rehabilitation

Federal financial aid to municapilities to clear property of obsolete plants and to replace them with new, modern, and diversified facilities to provide new employment opportunities within the confines of the same labor market areas.

Minimum wage

Increase the purchasing power of millions of low-wage workers by amending the Fair Labor Standards Act to provide a minimum wage of $1.25 per hour and extending coverage to all workers who can constitutionally be brought under protection of Federal minimum wage legislation.

Pensions

Raise Social Security Act pensions to levels adequate to provide an American standard of living to retired workers and their dependents, extend coverage to groups not presently covered, provide pensions for disabled workers regardless of age. Adequate pensions will strengthen and stabilize the economy by assuring substantial and stable flow of purchasing power to millions who are now unable to consume their fair share of what our economy can produce. The Social Security Act should also be amended to include hospital-medical care for those receiving social-security benefits.

Defense contract policies

Action and not mere lip service in the allocation of defense contracts to relieve unemployment. Present policies should be liberalized to permit effective use of defense contracts for that purpose. Full weight and recognition should be given to the fact that if additional costs are involved in placing contracts in distressed areas such costs may be more than offset by resultant avoidance of the heavy costs of unemployment to the community and the Nation. The remnants of the policy of industrial dispersion, completely senseless in the era of the H-bomb, must be ended so that work can be made available in areas where there are idle workers already housed and already provided with essential community facilities.

Public works—housing—hospitals

(a) Speed implementation of the Federal program for highway construction.

(b) Immediate congressional action to provide:

1. Federal aid for the construction of schools needed to wipe out the current deficit of 300,000 classrooms and to build the additional 265,000 classrooms which will be needed by 1960 to eliminate school overcrowding and to provide all our children with modern, pleasant, and healthy school facilities in which they can be given maximum opportunity to develop their full capacities.

2. Federal aid for the construction of hospitals to wipe out the current deficit of 838,000 beds and to provide the additional beds which will be needed by our growing population to make possible adequate care for all citizens and to raise the health standards of the American people.

3. Federal aid to assure construction of 2 million housing units per year, including middle-income as well as low-income and public housing, to provide good homes in healthy neighborhoods for all Americans.

(c) Grants and long-term low-interest loans to States, counties, and municipalities for construction of public buildings, airports, and other public facilities.

(d) To prepare for future contingencies, Federal public works programs should be planned and prepared well in advance so that construction may begin without delay whenever needed to avoid unemployment. In addition, Federal assistance should be made available to States and municipalities on terms which will encourage similar advance planning on their part and compensate them for any additional costs involved in advance planning.

Permanent commission on technological change

Establishment of a permanent commission on technological change composed of representatives of labor, farmers, management, and Government to keep under constant review developments in automation, atomic and solar energy, and other innovations of the era of the second industrial revolution and to make appropriate recommendations to Congress and the President to assure that the fruits of technological advance are fairly shared and full employment achieved and maintained.

The commission should give attention, among other matters, to industry locational decisions related to technological and market changes and should recommend congressional action, investigative and legislative designed both to protect workers and their communities against hardship and dislocation resulting from such corporate decisions and to foster a maximum degree of social responsibility in the making of such decisions.

Scholarships and aid to education and research

(a) Federal scholarships to assure that all our young people are given opportunity to remain in school long enough to develop their full capabilities whether through advanced education or through development of work skills. This would not only improve the quantity, quality, and productivity of our scientists, engineers, technicians, and labor force generally, thus strengthening national security and guaranteeing higher living standards for the future; it would also help to keep our labor supply in better balance with demand for labor.

(b) A substantial program to provide technological education and retraining for adults who desire to acquire new levels of skill or who are required to learn new skills because of job displacement resulting from automation or other technological change.

(c) Increase in salaries and improved working conditions for teachers at all levels of our educational system to make teaching an attractive and respected profession.

(d) Provision of adequate funds for research so as to provide further attraction of our best minds to the universities to contribute to our store of knowledge at the same time as they prepare our young people for life in an increasnigly complex world.

Farm program

(a) Immediate restoration of farm price supports to 90 percent of parity to help restore and maintain farm demand for industrial products until a new farm program is developed.

(b) More extensive use of existing farm surpluses to relieve hunger both at home and abroad.

(c) Development of a new and sound farm program, acceptable to the farmers themselves, which would provide full protection for the living standards of the family farmers while recognizing the equities of the consumers.

Aid to small business

Liberalization of Government lending policies to help small business, and stricter control over the exercise of monopoly power by mammoth corporations.

Wage-price-profit investigation

Vigorous prosecution of the Kefauver subcommittee's investigation of wage-price-profit relationships to expose the real reasons for existing high prices and to deter further inflation. National full employment policies cannot work if efforts to create expanded purchasing power are frustrated by the greedy and monopolistic price policies of big business.

Public control of Federal Reserve policy

Legislation to impose public responsibility on the exercise of the vast power of the Federal Reserve Board to throttle business activity and employment by cutting off the supply of money and credit. The Federal Reserve Board bears a major share of the responsibility for the current recession. It must never again be permitted to abuse its powers in ways that will lead to further recessions.

Publication of data on car inventories

The Department of Commerce should collect and publish data on new and used car inventories in dealers' hands broken down by area and, in the case of new cars, by make. This information is vitally important to the automotive production centers if they are to be prepared to meet future fluctuations in auto industry employment. It would also be extremely valuable in the formulation and application of national full employment policies. In addition, publication of the facts on inventories can be helpful in bringing public opinion to bear as a restraining influence on irresponsible production scheduling by the automobile corporations.

STATE ACTION

Unemployment insurance

The growing recession requires that State legislatures act immediately on unemployment-compensation improvements. Legislatures not presently in session should be convened in special session for this purpose.

Unemployment-compensation laws must be amended to bring benefits realistically into line with the wage losses suffered by jobless workers, to provide, as a minimum, uniform 39 weeks' duration for all workers eligible for benefits, and to remove restrictive eligibility requirements and barbaric disqualification provisions.

Improvement in unemployment compensation is the single most effective method available to the States in meeting without delay the problems arising out of unemployment. Improved benefits and duration will not only ease the hardships suffered by the families of the jobless workers; they will also bolster the purchasing-power base upon which the States' economies depend.

The increased benefits and duration should be made available immediately to all workers who have unexpired benefit years.

Moratorium

A moratorium should be declared on all mortgage, installment, and other debts of laid-off workers. Foreclosure and repossessions should be prohibited pending their return to work.

Public works

(a) Construction schedules should be accelerated and telescoped on all State-financed public works, planned or in progress, to provide maximum employment with a minimum of delay.

(b) To prepare for future contingencies, the States should plan and prepare their public-works programs well in advance so that construction may begin without delay whenever needed to avoid unemployment.

Approval of SUB integration

The few States which now block supplementation of State benefits under SUB plans should act immediately to remove the barriers.

As experience has already demonstrated SUB benefits, like improvements in State unemployment-compensation benefits, can relieve immediate hardship and inject additional purchasing power into the States' economies. States which have not acted to permit integration of the two types of benefits are injuring their own citizens—both workers and the business and professional groups dependent on workers' purchasing power.

MUNICIPAL ACTION

Public works

As in the case of Federal and State public-works programs:

(a) Construction schedules on municipal public works, planned or in progress, should be accelerated and telescoped to provide maximum employment with a minimum of delay.

(b) To prepare for future contingencies, the cities should plan and prepare their public-works programs well in advance whenever needed to avoid unemployment.

Industrial rehabilitation

Municipal governments should take the initiative in seeking the enactment of legislation to provide Federal financial aid to city and metropolitan area industrial rehabilitation programs.

Information for municipal planning

Municipal governments in the automotive, agricultural implement, and aircraft production centers should insist that the corporations provide them fully and frankly with a regular flow of information with respect to corporate plans that may affect the welfare of the communities involved.

The major corporations in industry are so large and so important in the economic life of so many communities, that their decisions frequently have greater bearing on the welfare of the communities in which they operate than any decisions that can be made by municipal government. In effect, these corporations constitute a private economic government with more far-reaching powers than duly constituted, democratically controlled, local governments.

Corporate decisions, in fact, can frustrate the efforts of local governments to provide for the welfare of their citizens. Certainly, local governments cannot plan properly to achieve their own objectives without knowledge of plans being made by the major industries upon which they depend.

The people of the communities affected by these industries, through their governments, are entitled to know what the corporations plan for them and to bring the force of public opinion to bear against private corporate decisions adverse to their interests.

This applies particularly to such matters as corporate plans for decentralization and the location of new plant facilities, the impact of automation on community employment opportunities, the impact of production scheduling and product pricing on employment and local business, and so forth.

It is imperative, therefore, that procedures be established for regular, full, and frank consultation between the corporations and the municipalities dependent upon them. Only through such machinery will it be possible to introduce an element of social responsibility into the private economic decisions of the auto corporations.

Information and education

Local governments are close to the people. They feel much more quickly than State or National Government the impact of economic fluctuations on the welfare of their citizens. It is therefore the responsibility of municipal governments not only to formulate and carry out their own plans to meet unemployment problems but also to bring those problems sharply to the attention of the broad public and of State and Federal Governments in order to assure that they carry their share of the responsibility for relieving individual and community hardships and providing work opportunities for the jobless; and be it further

Resolved, That we support the efforts of our Canadian members and of the Canadian trade union movement to meet the problems raised by the particularly severe unemployment in Canada; and be it further

Resolved, That we call upon the leadership of the united labor movement, the AFL–CIO, to convene a national full employment conference in Washington at the earliest possible date to mobilize the broadest support of the labor movement and the public at large behind efforts to get prompt and effective action at all levels of government; and be it further

Resolved, That we call upon the UAW international executive board to convene full employment conferences on an area, regional, or national basis, as seems advisable, to mobilize our own members and the leaders of their communities for similar action; and be it finally

Resolved, That copies of this resolution be sent to the President of the United States, Members of Congress, to governors and mayors of States and municipalities where unemployment is highest, and to appropriate officials at comparable levels in Canada.

An American Story: Caxton Printers—A Unique Venture in Publishing

EXTENSION OF REMARKS

OF

HON. HENRY DWORSHAK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, March 10, 1958

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which chronicles the success of an Idaho printing firm and tells a story of a publishing house that is more than a business.

The article appeared in Human Events of October 12, 1957, and outlines the unique story of Caxton Printers and its people—a firm which we in Idaho are proud to have in the book-publishing field.

This article concerns a business operation which stands in sharp contrast to the trend of today—a publishing house which prints works because of their thought-provoking contents, a printing firm that courageously presents the views of thoughtful men who sometimes disturb the tranquillity of the materialistic mind by probing into what is happening in America, and why.

It has been my privilege to know J. H. Gipson, Sr., president of Caxton Printers, for many years. I urge my colleagues to read this article, which is a just recognition of the printing house built on independent thought.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AN AMERICAN STORY: CAXTON PRINTERS—A UNIQUE VENTURE IN PUBLISHING

(By E. V. Stanley)

Twenty miles or so west of Boise lies the town of Caldwell, Idaho (population 10,000). Though physically remote from such power centers as Washington, New York, and Chicago, Caldwell harbors one of the crucially important political phenomena of the day. For it is the home of 1 of the mere 3 or 4 publishing houses where books stressing economic individualism and unyielding anti-communism may still find ready acceptance.

The publishing house in question is called the Caxton Printers, Ltd., a prosperous concern well known to natives of the surrounding Idaho countryside for its journeymen work on such specialties as greeting cards, announcements, and school supplies. Caxton has a national reputation as well, built through a labor of love: With no prospect of financial gain, it has made available to American conservatives important literature that would otherwise have been buried under the relentless pressure of liberal conformity.

Caxton's president is J. H. Gipson, Sr., a liberated spirit who personifies all that is resourceful, self-reliant, and imaginative in the saga of American individualism. With his father, Gipson built the Caxton Printers from meager beginnings to its present sizable dimensions, today handling a volume of business estimated at a million and a half dollars annually. Even so, it remains an enterprise in the classic American mold. Here is no purveyor of mass mediocrity or impersonal haven for the organization man. Caxton management is a family affair, including Gipson's two sons and a son-in-law. Their craftsmanship is personalized and loving, so that every Caxton book has a recognizable character—sturdy and solid, short on New York publishing frills, long on durability and substance. Every book made on the Caxton premises is hand bound, fashioned for the long service required by anyone who loves and uses books.

Caxton first made the transition from printshop to publishing house with the publication, in 1925, of a volume called the Idaho Citizen. This first venture, by virtue of the book's becoming a staple in the list of Idaho State textbooks, was, in Gipson's words, "something of a commercial success." But the real leap into the perilous world of book publishing did not occur until several years later.

"About 1928," Gipson says of these beginnings, "we found ourselves making more money than we really needed for our modest wants. One of our principals had some authors in his immediate family and knew how really hard it always has been for new writers, particularly new writers from the West, to find publishers even when they seem to be doing worthwhile work."

And so the Caxton story took a new, and peculiarly American twist. To exist, Caxton had built a profitable concern. This done, it used its resources to absorb losses—if by so doing others might benefit.

In embarking on its new course, Caxton thought to help deserving authors who might otherwise never have a chance to publish. "We hadn't any idea," Gipson remarks, "that the venture would be profitable—and it has not." (Gipson is probably one of the few re-

maining American businessmen who would offer deplorably small as an unsolicited description of the sales of any of his products.) Americana and fiction—the latter including Vardis Fisher's controversial In Tragic Life—were the standard commodities in Caxton's earliest phase as a publishing house.

Came the 1930's and the roof very nearly fell in. This was not simply owing to the depression; for in the toils of that national misfortune—on top of a considerable previous expansion and a drop in sales of more than one-half—Caxton would lay off none of its employees. Those who wished to remain did so, and all weathered the economic storms together. Meanwhile, net profits fell from $15,000 annually to a deficit of that amount.

To the stress of economic forces was added a more grievous torment—the New Deal of Franklin Roosevelt. Gipson recalls his bouts with the National Recovery Administration: "As an organization we are more or less individualistic and naturally under the old NRA we were in hot water most of the time. Running the Caxton Printers is quite a job for those of us who have put in a quarter of a century at it, and we didn't see quite how it was to be done by bureaucrats in Washington 3,000 miles away * * * had it not been for the Supreme Court decision outlawing NRA, the Caxton Printers would have been spoken of in the past tense."

After these scrapes, Caxton was also afflicted with tragic visitations of theft and fire. The big fire of March 17, 1937, razed the Caxton plant to the ground, consuming manuscripts, records, drawings. Again the Gipson vitality won out; in 2 months, scarcely missing a beat in its schedule of printing commitments, Caxton Printers was completely rebuilt and functioning as of yore.

All thesse tribulations were in the way of a testing—perhaps a strengthening—of the Gipson fiber. For shortly ahead lay what was in many ways the most audacious, and most portentous, by Coxton's publishing adventures—inspired by the dean of modern American libertarianism, Albert Jay Nock. In 1938, Nock wrote in the American Mercury that he was trying, with small success, to persuade publishers to reprint Herbert Spencer's The Man vs. The State. Nock speculated that the impact of this book, if read and comprehended by 5,000 leaders of American opinion, might turn the gathering totalitarian hurricane from our shores. Gipson acted on Nock's hope, and brought out a limited edition of Spencer's classic. The course had been entered, and Caxton undertook to bring out a select number of similar libertarian books in the succeeding years.

The result is a choice list of over 30 books which are essential to an understanding of our contemporary woe. In addition to Spencer's crushing refutation of the New Tories seeking to impose statism on the people of Great Britain, the Caxton Libertarian Library includes books by Nock, Ayn Rand, Cecil Palmer, Erik von Kuehnelt-Leddihn, William Graham Sumner, Felix Wittmer, Garet Garrett and many others.

The flavor of the Caxton brand of publishing may be tasted from inspecting a few of these books.

Garet Garrett's the People's Pottage, for example, is a ringing indictment of America's advance into statism. Garrett, one of our truly great prose artists, shows how the various measures of the New Deal meshed to form a total Socialist unity. He then examines the disastrous consequences of continued profligacy in Government spending at home and abroad. No one can read this truly moving book without conjuring up a none-too-distant apocalypse for America.

In The British Socialist Ill-Fare State, Cecil Palmer pumps stinging buckshot into the fat haunches of the Laborite experiment. Here is a wealth of illustration and argument that should jolt the craftiest of collectivists into silence.

It is fitting that Our Enemy, the State—Albert Jay Nock's lucid assault on statism—should be included in the Caxton library. An essential statement of true Americanism by a disaffected American, it should be read in conjunction with the Nock-recommended book which began the Caxton series, The Man vs. The State.

Also a must on the Caxton list is the irrefutable reasoning of Spencer's American counterpart—William Graham Sumner. What Social Classes Owe to Each Other, Sumner's demolition of the very sophistries and fallacies which plague us today, will be particularly remembered for describing the original forgotten man:

"The type and formula of most schemes of philanthropy or humanitarianism is this: A and B put their heads together to decide what C shall be made to do for D. The radical vice of all these schemes, from a sociological point of view, is that C is not allowed a voice in the matter, and his position, character, and interests, as well as the ultimate effects on society through C's interests, are entirely overlooked. I call C the Forgotten Man."

Erik von Kuehnelt-Leddihn tackles the central domestic question of our time head on: can we indulge in an orgy of economic leveling, he asks, and still retain our essential freedoms? In a literate and scholarly analysis, he shows that the answer must be a definite "No." Liberty or Equality is among the most penetrating works of social and political commentary available today—a fitting addition to the Caxton list.

So the Libertarian Library runs, a veritable motherlode of good American sense—the richest vein of ore in Idaho's rich mining country. And—what is especially reassuring—more such valuable books will be added as time passes. President Gipson's commentary on Caxton's initial experience with The Man vs. The State conveys the matter-of-fact fastness of the company's intention. Nock's pessimistic forecast of sales, Gipson notes, was correct—"because the first printing that we brought out in 1940 amounted to 1,500 copies and, notwithstanding a great press from the reviewers, it took us more than 5 years to sell it."

He concludes, simply: "However, since then we have published many other books and monographs, some of which have sold much better, and we will publish others."

Here is a quiet determination that will not falter before the latest winds of doctrine, nor buckle under the raw demands of liberalism's transient power.

Export-Import Bank Is Our Most Profitable, Practical, and Beneficial Foreign-Aid Operation

---

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1958

Mr. McDONOUGH. Mr. Speaker, the Export-Import Bank is performing an outstanding service in the field of international relations and the establishment of good will by making loans not only to foreign nations, but also directly to private enterprise in foreign nations.

The loans of the Export-Import Bank are repaid and create trade. And in my opinion, assistance to foreign nations and their citizens through sound loans such as those offered by the Export-Import Bank is far superior to the giveaway programs which have been financed through foreign aid.

The following article, Eximbank Good News for the United States Taxpayer, is an excellent review of the important and constructive accomplishments of the Export-Import Bank:

EXPORT-IMPORT BANK—GOOD NEWS FOR THE UNITED STATES TAXPAYER

(By Blake Clark)

A policeman in a Texas border town was startled not long ago to see a cow gallop past, hotly pursued by a half dozen shouting Mexicans. He joined the chase and in the excitement pulled his gun. Suddenly he found himself flat on his back, laid low by a flying tackle from a little man yelling wildly in Spanish. Haled into court, the Mexican farmer got a sympathetic hearing. The judge ruled that any man who would tackle an armed officer to protect a highly prized cow bound for his stock-poor Mexican homeland deserved to go free.

This incident shows how much a loan from the Export-Import Bank, which is owned by the United States Treasury, can mean to an individual beyond our borders. For that cow was one of 20,000 beef cattle and milkers bought by Mexican farmers last fall and winter from ranchers in 14 of our drought-stricken Midwest States. The Mexicans paid with $5 million lent by the bank to the Agricultural Credit Bank of Mexico; they have 4 years in which to repay the loans.

This transaction is paying triple dividends. It was a godsend to many American ranchers who would have been forced for lack of fodder to dump their cattle on a glutted market. The fine breeds are building up herds below the border, providing our neighbors with better beef and more milk. And the loan, guaranteed in full by the Mexican Government, will earn $135,000 a year in interest over a 4-year period for the Export-Import Bank.

Eximbank, as it is popularly known, enables the United States to help build up living standards around the world while strengthening our own economy. Thanks to credits it has extended, men are mining manganese along the Amazon, uranium in Africa, copper in Peru; building railroads in Africa and Iran; developing hydroelectric power in the Philippines and Brazil; manufacturing cement in Indonesia, fertilizer in Egypt. Equipment and products for projects the bank finances are purchased from United States firms, with few exceptions.

Created in 1934, the bank has $1 billion of capital stock, all owned by the United States Treasury, and authority from Congress to borrow 4 billion more from the Treasury. As of last June it had money out working on 635 projects in some 60 countries. In 23 years it has paid $362.8 million in interest and dividends to the United States Treasury and accumulated a $442.8 million surplus. It is one Government agency that makes money for the United States taxpayer. Losses from bad loans are phenomenally low: One hundredth of 1 percent. (Commercial bank losses average nine times that.)

The Export-Import Bank differs from the International Bank for Reconstruction and Development (the World Bank) in that the latter is owned by 62 member nations and makes only government-guaranteed loans, while the Export-Import Bank extends more than half its credits directly to private enterprise. The Export-Import Bank lends

more money, makes more profit, spends far less than the World Bank.

New Zealand's Murupara project, financed in part by a $16 million Export-Import Bank loan, is an excellent example of how such loans benefit both a foreign country and the United States. In 1913 the New Zealand Forestry Service planted an extensive tract of pulpwood trees on wasteland where the volcanic-ash soil, plus a climate so mild that plants grow 46 weeks a year, make the annual growth many times that of similar forests in Canada, Scandinavia, or the United States.

To take full advantage of this resource, which is expected to produce some 30 million cubic feet of wood a year, the New Zealand Government and the Tasman Pulp & Paper Co., working together, decided to develop electric power in the area and to construct lumber, chemical pulp, and newsprint mills. Total cost will be $84 million, of which the $16 million from the Export-Import Bank is for the purchase of United States products such as machinery for manufacturing paper.

Until the Murupara project, New Zealand's economy was based almost entirely on dairy products, meat, and wool. Now the country is exporting lumber, chemical pulp, and newsprint—and on newsprint it is saving $10 million a year formerly spent to import it from abroad. This saving may now be spent on other imports, either to develop the economy or to provide a higher standard of living, thereby making New Zealand a better market for a variety of United States products.

In pre-Nasser 1946 an Egyptian businessman, Ahmed Abboud Pasha, flying one day with a friend over the petroleum refineries at Suez, saw flaming waste gas flaring from tall stacks. "You could use that waste gas to produce nitrogen fertilizer," remarked the friend, Col. Frederick Pope, former president of the Chemical Construction Corporation of New York.

A year later Abboud showed Export-Import Bank officers engineering designs and economic studies prepared by Colonel Pope's firm, and requested a loan to build a fertilizer plant. The bankers investigated, let Abboud's company have $7,250,000. Today the plant uses the waste gases for fuel and as a source of hydrogen, which is combined with nitrogen taken from the air and limestone from nearby quarries to make fertilizer to increase Egypt's food production.

The number of United States firms getting a boost in sales from one of these export-import loans is astonishing. One $61,500,000 series of credits to a Chilean steel company resulted in 7,807 separate orders to 780 United States suppliers. Overseas sales are only a small percentage of our total business, but for certain segments of our agriculture and industry they are crucial. William Blackie, executive vice president of Caterpillar Tractor Co., says that his firm sells abroad one-third of its entire output, much of this on export-import credits. Without that business, Caterpillar would have no work for more than one-third of its 36,000 employees and its domestic payroll would be lower by about $70 million a year.

What about the harm done to a United States industry when foreigners start making a basic product like steel? Americans raised this objection when Export-Import Bank granted a $45-million loan to Brazil for a steel mill. Here is how it worked out.

The site chosen was Volta Redonda, 65 miles northwest of Rio de Janeiro. This once-sleepy place is now an attractive town with schools, hospital and recreation facilities for 40,000 people. All this building required steel and innumerable other products, many of which were purchased in the United States. Further purchases in the United States of supplies to run the plant itself have, in the course of years, amounted to more than the original loan. Each year the company buys 400,000 tons of coal from West Virginia.

Meanwhile, Brazil's production of steel stimulated the construction of dozens of steel-using industries, producing everything from refrigerators to railway cars. As this Brazilian industrial development progressed, the Volta Redonda mill could not cope with the new demands. By 1951, 5 years after Volta Redonda got in full swing, Brazilian builders had increased their total purchase of United States steel by more than one-third.

Benefits to us from Export-Import Bank loans to friendly neighbors multiply in other ways. Our industrial machine requires an increasing supply of manganese for steel production. Since we must import 90 percent of our manganese, the discovery in Brazil 15 years ago of one of the world's richest stores of this ore was of vital interest.

A woodsman named Mario Cruz, prospecting for gold along the Amazon, picked up a huge rock as ballast for his canoe. Its strange, grayish appearance excited his curiosity, and he took it to the governor of the territory. It proved to be 55 percent pure manganese. Mario Cruz led geologists to gigantic outcroppings of the ore. Shortly afterward a $67,500,000 Export-Import loan to a private company, Industria e Comercio de Minerios, S. A., got Brazilian production underway. Now the precious ore is coming out at the rate of a million tons a year, and almost all of it comes to us.

Similarly, when miners in Africa discovered significant amounts of uranium in gold ore, our Atomic Energy Commission asked Export-Import Bank to grant loans to help the mining companies there extract it. As a result, many plants are now producing substantial tonnages.

Other Export-Import Bank backed projects are moving mountainsides in Afghanistan (for highways), finding and drilling water wells in the desert of Iraq, building a railroad along the banks of the crocodile-infested Limpopo River in Mozambique.

Export-Import Bank has never competed with private capital. It works closely with commercial banks. "There is no competition between Export-Import Bank and us," declares the head of the foreign department of a great American bank. "We commercial bankers seldom lend for exports for longer than 180 days. We don't want our money tied up in long-term investments abroad."

The man who minds the Export-Import Bank till is Samuel Clark Waugh, 67, formerly a Lincoln, Nebr., banker and Deputy Under Secretary of State for Economic Affairs. Before he became president in 1955, the bank averaged only 50 credits a year. Last year its directors authorized 182 credits totaling $1,066,000,000 to borrowers in 36 countries. One unusual loan—to help Britain keep the pound stable—was for $500 million; others were for as little as $2,000. Waugh is a firm advocate of trade to replace aid.

Says he: "We must build up other countries if the United States is to continue to grow and prosper. We can't keep selling abroad unless they can pay. They can do this by accepting a gift, by borrowing, or by earning dollars. For all concerned, the best way is to help them earn dollars by producing goods."

Dr. Dreistein Writes the White House

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1958

Mr. MULTER. Mr. Speaker, although the following is written with a humorous touch, a very serious message is conveyed. I commend it to the attention of our colleagues.

The article appeared in the New Republic, December 30, 1957, issue.

DR. DREISTEIN WRITES THE WHITE HOUSE

(By J. Lincoln Paine)

A letter sent by Albert Einstein to President Roosevelt on August 3, 1939, launched the nuclear age by bringing to the President's attention the phenomenon and promise of atomic energy. In this not-so-gentle spoof of bureaucratic language and practice, a somewhat similar letter gets different treatment. The author, a scientist intimately familiar with the administrative labyrinth that faces a technical project in the Government, writes under a pen name. Professor Dreistein is, of course, an entirely fictional character.

ADVANCED RESEARCH INSTITUTE,
Cambridge, Mass., August 2, 1961.

THE PRESIDENT OF THE UNITED STATES,
The White House,
Washington, D. C.

ESTEEMED SIR: Some recent work by my colleague, Professor Hauck, of Pretoria, has been communicated to me in manuscript. His findings lead me to believe that scientists may be able to counteract the forces of gravity in the near future. Undoubtedly, if Hauck's new discoveries are further developed and applied, a vast new area of space exploration and missile development will open.

The situation which has arisen seems to call for watchfulness and, if necessary, quick action on the part of the administration. My colleagues here have urged me to bring this obviously significant development to the attention of the appropriate Government authorities. I believe, therefore, that it is my duty to bring to your attention some of the scientific facts which are attached in a separate memorandum.

Of course, my colleagues and I offer our full services toward the further development of this discovery.

Very truly yours,

EGBERT DREISTEIN.

THE WHITE HOUSE,
Office of the Special Assistant to the President, 16 August 1961.

To: The Secretary of Defense.

Attached is copy of letter from Prof. Egbert Dreistein. Draft reply for my signature. Be polite. Incidentally, is there anything to this?

GRANT QUINCEY.

INTER-OFFICE MEMORANDUM

Date: 2 September 1961.
Ref.: CPT-201/1.

To: Col. T. Lee, OPS.
From: The Secretary.

Prepare reply to attachment. Is the institute under contract to the DOD? Quote me their budget figures for the last three fiscal years.

Official use only

INTER-OFFICE MEMORANDUM

Date: 29 June 1962.
Ref.: CPT-201/179.

To: The Secretary.
From: Col. T. Lee, OPS.

The matter referred to in your memorandum CPT-201/1 of 2 September 1961 has been referred to an Inter-Service Ad Hoc Committee of staff-rank representatives. The committee concurred that there was no consensus on the problem.

Individual views were as follows:

1. The Army feels that ordinary gravity is not fully understood yet and sees little purpose in extending studies into the field of antigravity.

2. The Air Force has been conducting small-scale research on antigravity at the top secret level. However, since it is impossible to extend the concept to fit existing

weapons systems, a low priority has been assigned.

3. The Navy has recommended a high priority to anti-anti-gravity investigations under the code name of Plop.

There is no record in DOD files of a facility clearance for the Advanced Research Institute. Professor Dreistein has never applied for a Q clearance. Given the sensitive nature of the anti-gravity question and the extenuating circumstances, the attached draft reply to Professor Dreistein has been made as clear as classification permits.

The committee reached agreement on a single point: Professor Dreistein should not be encouraged. A permanent subcommittee has been set up to provide similar assistance in expediting the handling of any future suggestions from the scientific community.

DEPARTMENT OF DEFENSE,
OFFICE OF THE SECRETARY,
2 July 1962.

To Special Assistant to the President:

In reference to your request of 16 August 1961, attached is draft reply to Prof. Egbert Dreistein.

The receipt of Professor Dreistein's letter has stimulated reexamination of the status of antigravity research in the Department of Defense. Estimated future budgetary allocations for that type of research do not warrant continuation of the projects which have been under way. Accordingly, I have issued an order that they be curtailed.

FRANK WATT.

THE WHITE HOUSE,
Office of the Special Assistant to the President, 5 July 1962.

Prof. EGBERT DREISTEIN,
The Advanced Research Institute, Cambridge, Mass.

DEAR PROF. DREISTEIN: The President has directed me to reply to your letter of 2 August 1961. We thank you for your interest and assure you that the matter has been investigated by appropriate Government agencies.

Your patriotic interest is very much appreciated and the President is always interested in receiving stimulating ideas of that nature.

Yours very truly,

GRANT QUINCY.

MOSCOW, AUG. 5 (1964).—A Soviet spokesman announced today that a manned space station has been established as a satellite around Mars and is now observing landing conditions on that planet.

The achievement was credited to the revolutionary discoveries of Prof. Otto Hauck, formerly of South Africa and now in the Soviet Union. He has been awarded three Lenin prizes for his work.

THE WHITE HOUSE,
6 August 1964.

Prof. EGBERT DREISTEIN,
The Advanced Research Institute, Cambridge, Mass.

DEAR PROFESSOR DREISTEIN: My advisers report to me that you have been interested in the subject of antigravity research. Because of the grave circumstances in which our Government finds itself as a result of the announcement from Moscow yesterday, I am asking you to lead a new high priority project in that direction.

If you will come to Washington the early part of next week, a briefing will be arranged by representatives of the military services and the Central Intelligency Agency who will be able to give you a little of the historical development of Professor Hauck's work.

I, as President, personally hope that you and your colleagues will rise to the challenge of this new emergency.

Yours very truly,

HORATIO CALVIN.

American Merchant Ships, Foreign Trade, and National Security

---

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. TOLLEFSON. Mr. Speaker, I have just read again the excellent address of our colleague, the Honorable FRANK T. BOW of Ohio, before the American Merchant Marine Conference and the Propeller Club Convention, at Houston, Tex., on October 22, 1957. I had previously read a copy of the speech last fall during the recess of Congress, and would have placed it in the CONGRESSIONAL RECORD then had Congress been in session. It is an outstanding address given by one of the outstanding Members of the House of Representatives. Mr. Bow's contributions to the well-being of our Nation have been many. Amongst them has been his fine work in behalf of the American Merchant Marine which is our country's fourth arm of defense and which is an important segment of our economy. I insert his address in the RECORD so that other Members of Congress may read it.

AMERICAN MERCHANT SHIPS, FOREIGN TRADE, AND NATIONAL SECURITY

Quite frankly, my views of your great industry have altered radically in the last few years. Sometime ago, before I became a member of the House Appropriations Committee, I do not think it would have occurred to the Propeller Club to extend the sort of invitation that brings me here today.

In recent years, however, I have had the opportunity to become much more acquainted with the objectives, problems and contributions of the United States Merchant Marine. And no one, as we know, is more zealous than a convert.

What has brought about this conversion? As you might expect, it has been the opportunity, for which I shall always be grateful, of serving as a member of the House Appropriations Committee. I have attended literally hundreds of hearings and heard scores of industries and Government agencies present their justifications for Government financial support.

The testimony given at these hearings varies, of course, both in style and skill of preparation and execution. As committee members, our great challenge, always, is to overlook personalities and other surface impressions and probe for the real issues involved. Why, we must ask ourselves, is the request for financial assistance necessary at all? Is it reasonable in amount—or is the appropriation sought more than required? Or, as sometimes happens, is it inadequate to do the job properly? Is it in line with past requests—and if not, why not? What is its importance to the national interest relative to other Government obligations? Must the expenditure be made now, or can it be deferred?

As taxpayers, I am confident that you would be gratified by the skill and patience which committee members, notably Congressman PRINCE PRESTON of Georgia and your own ALBERT THOMAS of Texas, exercise in assuring that our recommendations will result in a fair return on each tax dollar.

But Congressmen, of course, are human. They frequently enter Congress with preconceived points of view, subconsciously or not, on many issues with which they will have to deal as committee members. These are predispositions formed by childhood, education, geographical environment, and other factors. The last factor—geography—had, I suppose, much to do with my early disinterested view regarding the merchant marine. You see remarkably few C-3's on Nimishillen Creek in Stark County, Ohio, where I come from. My childhood sleep was seldom lulled by the sound of surf or interrupted by foghorns.

MIDWEST GREAT SOURCE OF CARGO

There are many others like me in this country. Yet it is we who are the great source of your cargoes, inbound and outbound; and we of Ohio, we of the Midwest, and we of all the inland areas have a right to know more about you. You have an obligation—to us and to yourselves—to make us aware of your tremendous contributions to our economic and our military strength.

It is not enough that you are ably represented in Washington. We in Congress are obliged to steer a navigable course between our responsibilities to our constituents and, where there is a difference, our conviction as to what is best for all the country. Our Nation's need for adequate ocean transportation under its own flag has become crystal clear to me; it may be less clear, and understandably so, to many other people of Ohio and the Midwest.

It is my duty to act in the best interests of the merchant marine where I consider this, as I must do, to be congruent with the best interests of Ohio and the entire country. I would think that it is your obligation and opportunity, more so than mine, to make known this mutuality of interests that exists between the United States merchant marine and inland America.

Consider for a moment that national problem—the national budget. Paring anything from the costs of governing this burgeoning population of ours is inexplicably difficult. Yet, your industry is part and parcel of an $18 billion entry on the credit side of the national ledger. I refer, of course, to our income from the goods we sell abroad. There would, of course, still be foreign trade without an American merchant marine. But what sort of foreign trade? And at what cost, in terms of reliability, freight rates, assured access to vital imports we lack domestically, and so on? This is obviously too important a piece of United States income to be handed over, lock, stock, and barrel, to our foreign friends—much less our foreign enemies.

A full 8 percent of all those goods we produce that can be moved at all are shipped overseas to foreign customers. Can we trust their delivery to our competitors? I think not. Our worldly wise British friends have an expression applicable here that requires little explanation. The gist of it is, "Don't lend your doughnut to your friend." Or, as they say in New York, "Does Macy's tell Gimbels?"

NATION DEPENDENT ON AMERICAN MERCHANT SHIPS

Few persons in the country know better than you assembled here today how dependent we are on shipping and foreign trade to sustain life in our Nation's industrial machine. I thought I had a fair idea of our dependence upon imports, but I learned just this week that there are only two metals (magnesium and molybdenum) for which we are not at least partially dependent on foreign supplies.

Coming as I do from a highly industrialized area, totally dependent on imports to keep its assembly lines busy and its workers employed, I respect the words I heard recently from one of your industry's greatest leaders, James A. Farrell, Jr.: "The carriage of our export and imports," he said, "is too

critical to the health of American industry—which is, after all, the ultimate source of our defensive strength—to be entrusted to the whims, vagaries, and competitive urges of foreign maritime powers. It is a national jewel far too precious for delivery by the first available messenger."

Let me tell you something else about this Mr. Farrell, while I am about it. He visited my hometown of Canton recently, at my suggestion and at the invitation of our Chamber of Commerce, and what he had to say there about your industry and what it means to Canton and the surrounding area was an education to all those fortunate enough to hear him. I readily admit that I learned some things about Ohio's kinship with the merchant marine that were news to me. Let me mention just one figure that I shall not soon forget. The Committee of American Steamship Lines, which Mr. Farrell represented during his Canton visit, did some work with a pencil and a research economist and developed figures showing that Ohio's share of United States exports last year totaled approximately $1 billion.

Now, gentlemen, let us be completely realistic. If you will take the time to develop figures like that for every State in the Union, and make this information available to the people in interesting, understandable terms, you shall certainly have an easier job from here on in, gaining understanding and justifying support for the United States merchant marine. All this, of course, has to do only with the commercial aspects of our national shipping policy. I am not one of those who believe that national defense considerations are the sole basis for Government support to United States shipping.

I see no sensible distinction between a strong domestic industrial economy and a secure military potential. I see no way in which we can be commercially dependent and militarily secure. I have no formula for developing military independence out of an industrial machine beholden to foreign powers for its bread and water.

MERCHANT MARINE VITAL TO DEFENSE

Nor, so long as we are on this military tack, do I subscribe for an instant to the view that modern warfare has altered the role of our merchant marine. I say this confidently because, unlike some of my associates in Washington, I am not hobbled by the gift of clairvoyance. I do not know what form modern warfare will take. Will the world really seek suicide with an all-out hydrogen war? Or will the very effectiveness of modern weapons serve to prevent their use, reducing future combats to such primitive techniques as those employed in Korea and World War II? For safety's sake, must we not assume something in between the two, in which event the need for seapower and reliable ocean transportation will be no less than it has been historically? Should we risk arming to the teeth with H-bombs and ICBM's, only to find ourselves helpless against any well-directed musket fire?

I make no pretenses at being a military expert; I can only impose the tests of commonsense and past experience on the arguments of those who are. But isn't it reasonable to assume that one way to determine how the next war shall be fought is to examine the facts as we know them to be, then lay our plans from there—fully prepared to revise them as subsequent information, not hunches, indicate?

If that is so, then isn't there some useful indication of the war to come in the fact that Russia currently has a fleet of more than 475 submarines, and is building them at the rate of better than 80 a year? Let me remind you that Hitler started World II with but 57 submarines. Russia, obviously, foresees the need to destroy as much enemy shipping as possible in any future war—which would suggest that she believes merchant ships are important to us, even if some of our own people do not.

SOVIET NAVY GAINING ON UNITED STATES

Since 1950, in fact, the Soviet Navy has been outbuilding our own in combatant tonnage of many classes. They have outbuilt us in destroyers 9 to 1, and in cruisers 14 to 1.

Russia fully appreciates the fact, which some of our own countrymen seem quick to forget, that last year 99.6 percent of our commercial tonnage was carried in ships and 99.15 percent of our military tonnage. One reason for this is that it requires 4 tons of aviation gasoline to fly 1 ton of freight across the Atlantic, for example. So it is clear why Russia would seek to deprive us, when the time comes, of access by sea to our friends, allies and forces overseas. And should she obtain control of these seas, she would dominate nearly 95 percent of the earth's surface.

Will airpower, not immediately, but eventually, make shipping obsolete? I cannot foresee it, but again, I would rather look into the facts than into a crystal ball. Facts show me, as we have seen, that over 99 percent of our foreign trade is currently moved in ships. Every day more than 2,000 merchant ships are traveling the North Atlantic sealanes alone. True, this may change, but I am confident that such change is not so imminent that it could possibly affect the plans we make today. And as of today, there is nothing under this sun to challenge the payload carrying capacity of an oceangoing ship.

You of the maritime industry, then, have much to claim for the role that ocean shipping is destined to play for an indeterminate number of years. You also have problems, of course, that are serious and require assiduous attention. One particularly prominent area for critical self-examination and improvement is cargo handling which, I understand, absorbs between 50 and 60 percent of a cargo liner's revenue. The same attention should be directed to unity within your industry so that you can speak clearly and authoritatively on issues that concern all of you. Then, of course, your labor-management relationship is an area of continuing concern to all Americans.

INDUSTRY SHOULD GET COMMUNICATIVE

None of these problems are easy, but neither are they insoluble. Nor are they the only ones you face. One of the most important of these remaining has to do with your public. This problem will be discussed rather fully by another speaker, so I shall not dwell on it except to say this: that I am part of your public. So are all the other Members of Congress. What you do and what you tell the public about what you are doing will be seen, heard and read by us as well as others. I would suggest that your industry get more communicative. Certainly a long and fruitful step in this direction has been that taken by the committee of American steamship lines. I would hope other industry representatives would follow the committee's example of visiting Midwestern communities to talk in factual terms about the impact that reliable ocean transportation has on their economics.

I understand that it has visited Cedar Rapids and Racine as well as Canton, with top line executives touring local plants, appearing on radio and television and speaking before chambers of commerce and manufacturers associations on the importance of a strong merchant marine. This should be a continuing activity.

The reason that such efforts must be unceasing is clear. Since the Merchant Marine Act of 1936 was passed, the taxpayers have contributed $1,028,000,000 to the support of the United States merchant marine in the form of construction and operating subsidies. Based on present population figures, that breaks down to little more than the cost of a pack of cigarettes a year per capita. Nevertheless, it is still more than a billion dollars. But, in my opinion, it is an expenditure that can be justified.

It is simply the nature of the business you are in that justification before the bar of public opinion is an additional task you must assume willingly and execute both skillfully and unceasingly. It is not enough that certain of us in Washington are aware of the need for an adequate United States merchant marine. Our constitutents in every town and village should be equally aware. I wonder if they are?

This, gentlemen, is an opportunity for your industry; more importantly, it is your responsibility to your country.

Minnesota—Past and Present

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 10, 1958

Mr. HUMPHREY. Mr. President, this is Minnesota's centennial year. The March issue of the Minnesota Farmer, serving Minnesota farm families for over 45 years, contains 2 editorials on Minnesota past and present.

I ask unanimous consent that the editorials entitled "So Young—Yet So Old," and "Centennial Thoughts" be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

SO YOUNG—YET SO OLD

It has been 100 years since Minnesota was admitted to the Union as a State.

While 100 years seems like a long time and many great developments and progress have been made in that time, the State is still young—and yet, the land within its boundaries is so very old.

Records show that 200 years before Minnesota's birth as a State, the first white men, two young Frenchmen, Sieur des Grosseilliers and Pierre Radisson, explored parts of Minnesota and wrote the story of their travels here. Others may have explored the State previously but their records are rather dim.

But the history of this land goes back much further than that. The little time covered by man's written records is but a snap of the finger compared to the vast expanse of time that Nature has been working over the mountainous masses of rocks, wearing them down, and breaking them into smaller particles through ages of wind and water erosion, freezing and thawing, long areas of volcanic upheavals, and extensive periods of floods and wtaer inundations and marine life.

Nature began the preparation of this great fertile State when the first drop of rain sizzled off the molten masses and began its slow process of wear and tear to the eventual reduction of the masses to a powdery form on which we depend so much today for growing our crops.

Then in more recent geologic times, the glacial period put the finishing touches to the process. Vast ice masses at various times ground slowly southward crumbling and pulverizing and spreading the masses of materials over the entire territory carrying a lot of our good nutrients so necessary to plant life down across the State of Iowa.

These ice masses gradually melted and receded northward again, leaving draining systems, rivers and valleys, and likes which were so important when man came upon the scene.

So this great expense of soil building by nature, this long process of laying out a landscape so beautiful and so endowed with a wealth of mineral and fertility, reduces man's activity in Minnesota to a mere snap of the finger.

But the available fragments of man's records of more recent developments of this great agricultural area are intensely interesting. Thanks to the many people who have gathered facts and contributed to the accumulation of these records now kept in the archives of the State historical society and to the many county historical collections.

With this thought in mind, most of the pages of this issue of the Minnesota Farmer are devoted to the story of yesterday in our forestlands and prairies, the crude implements with which the early settlers plowed the land and put in crops. It is a story of cooperation between agriculture and allied industries.

Before agriculture could expand much, building materials were needed. The early lumber mills provided that. Then transportation facilities were needed. The railroads furnished that. Then as more grain and livestock was produced, flour mills, stockyards, and slaughtering houses were constructed. These and other industries grew up hand in hand with agricultural development.

At this time, with Minnesota celebrating its 100th birthday, and standing out so prominently as a great agricultural, livestock, and poultry area of the Nation, the Minnesota Farmer salutes not only farmers, but all the allied industries which have contributed to our century of agricultural progress.

CENTENNIAL THOUGHTS

We hear a great deal about Minnesota centennial these days. Here in the cities, parades, celebrations, TV and radio programs, newspapers, and magazines all carry stories, pictures and other reminders that our State is 100 years old this year. The actual birthday date will be May 11.

Prior to that date in 1858 the State was called Minnesota Territory and embraced a lot of territory which is not included within its boundaries today. Conditions were much different then. But now that our State has reached the 100-year mark, we naturally try to imagine what went on during the past 100 years to make Minnesota what it is today. Also we wonder what might happen within the next 100 years.

As one of our office visitors recently remarked, "I guess we can expect just as great things and changes to take place in the next 100 years as what has happened during the past 100 years."

That may be true, it's easy to look back, but difficult to even imagine the future. But we have some very good records of the past which aid us in measuring the progress made in Minnesota.

Think back around 100 years ago when this State had less than 7,000 citizens, around 300 farmers with only slightly more than 5,000 acres of improved farmlands. That was the record in 1850. Just 8 years later Minnesota became a State. At that early time there was practically no wealth accumulated, and real estate held by settlers was almost unsalable. Money was scarce and interest on borrowed money was 2 percent per month and at times even higher. There were no industries nor manufacturers here at that time. Not even 1 mile of railroad had been constructed. No sound banks or currency existed. Not a cent was in the State's treasury. And to make things worse, a severe depression hit the country that year and the harvest was almost a complete failure.

That is about the way Dean T. H. Fenske of the Minnesota University Institute of Agriculture portrayed it in a talk to visitors attending the recent Farm and Home Week program in St. Paul. It took stouthearted, determined people to stay here in those days and help build the State's future.

Today there are 145,000 farms in Minnesota, not quite as many as a few years ago but farms are larger now. Those farms aggregate over 30 million acres. The forces that played a key role in the development of the State's agriculture since 1858 are clearly brought out by Dean Fenske. They are:

1. Mechanization of most farm operations.
2. Introduction of electricity on a broad scale, through the Rural Electrification Administration.
3. Development of new varieties of crops and livestock and other knowledge by agricultural experiment stations around the country.
4. Growth and development of agricultural education through colleges, schools, vocational courses in high schools and the Future Farmers of America.
5. Development of the Agricultural Extension Service and 4–H Club work.
6. The cooperative movement in agriculture.
7. Development of general farm organizations, such as the Grange, Farm Bureau, and Farmers' Union.
8. Organization of the Soil Conservation Service and soil conservation districts.
9. Government agricultural programs.
10. War—especially World Wars I and II.

Born in a panic back in 1858, there was little else for the State to do but to progress. It couldn't be much worse. Since then farmers and allied industries have made steady progress to lift the State to its present status.

From 1880 to 1885, wheat and other small grains were the major products. By 1880 wheat farming was well established in the Red River Valley.

Livestock farming increased in the southern part of the State from 1885 to 1905. The first cooperative creamery was started in Freeborn County in 1890.

From 1897 to 1917 Minnesota farmers were generally more prosperous than at any time previously. Markets were good and the population of the State was growing.

Then came World War I followed by a price decline in the early 1920's. The farmer's dollar dropped to 77 percent of prewar value. Some recovery was made in the late 1920's, but the great depression of 1929 and the early 1930's saw an avalanche of prices reach record low levels. Corn on Minnesota farms brought 26 cents per bushel. Hogs sold from $4 per hundredweight downward, many below $3. Potatoes sold at 28 cents per bushel.

Pointing to recent progress in farming, Fenske referred to figures from the 30-year-old Southeastern Minnesota Farm Management Association. Farms in that organization since 1928 have grown 42 percent in size. Corn yields have increased by 55 percent per acre. Big litters have doubled per farm, and 382 percent more mechanical power equipment has been added.

On those same farms, he emphasized that 51 percent of total sales—$4,456 per farm—went for cash expenses in 1928, leaving a $2,258 net labor income. In 1956, their total sales averaged $18,844 and 70 percent went for expenses, leaving $5,611 labor income.

Getting back to prospects for the next hundred years, farms are becoming larger, more machines and equipment are being used. This undoubtedly will continue with, perhaps, more speed. Engineers in farm equipment are already working on ideas for higher speed in farm equipment. In fact this seems to be the age of speed for everything, missiles, sputniks, etc. So it is reasonable to feel as our office visitor felt, that developments in the next hundred years could be as great as developments of the past hundred years.

As Fenske said to his Farm and Home Week listeners, "the challenge of tomorrow is to so live to pay in part that debt to the past, so that those who came after may look at what men today are doing and be satisfied with what has been done."

Situation in the Sudan

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. O'HARA of Illinois. Mr. Speaker, in view of the present tense situation in the Sudan I am extending my remarks to include a report I made early in the year to my constituents in the Second District of Illinois. This report was based upon my observations as a member of Chairman WAYNE HAYS' subcommittee of the Committee on Foreign Affairs. The gentlewoman from Illinois [Mrs. CHURCH] was the third member of the study group. The report follows:

THE SUDAN

Khartoum is a charming city of 75,000 near the junction of the Blue Nile and the White Nile. In our Embassy the personnel go to work at 6 or 7 in the morning, quit at 2 in the afternoon, as a matter of living with the climate. There are 15 Americans in all, including the Ambassador and the USIS staff which has many headaches not attributable to the climate to make an annual allowance of $36,000 stretch far enough to cover a country a third the size of our country with American books, films, and broadcasts to offset Communist propaganda.

Pitted against this lone Ambassador and his corporal's guard are 61 Soviet diplomats, each with a regal retinué of highly trained persons who engage in every phase of infiltration under the protection of diplomatic immunity.

This is a relatively recent device in Soviet strategy. We found it first in the Sudan. There are six Soviet bloc countries. Instead of one Ambassador representing all, as would be sufficient, a fully accredited Ambassador is assigned by each of the bloc nations. As the Ambassador must have a staff, the reasonable size of which cannot be questioned under diplomatic courtesy, this device is literally flooding Africa, even in countries friendly to us, with past masters at infiltration.

In the Sudan, for instance, we learned that of the 5 newspapers 3 were Soviet controlled either by ownership or subsidy and that individual newsmen had been whispered where to go when in personal need of funds.

This is why the Soviet regards the Sudan as fertile field; northern portion is inhabited by Moslem Arabs, 6 million in all; Southern portion largely by pagan primitive tribesmen, numbering about 4 million, and overall illiteracy is over 90 percent. Moreover, the Sudan is a signatory of the pact and treaties of the Arab League. (It is also a member of the United Nations and is reportedly party to a mutual defense treaty with Ethiopia.)

Despite the tremendous drive the Soviet is making to take over the Sudan, there was

little indication that the infiltration has reached responsible circles. Indeed, everything seemed to the contrary. We had a long talk with the Prime Minister, Sayed Abdulla Bey Khalil, and later were dinner guests at his home. At a reception by the Minister of Foreign Affairs there were 64 guests, with whom we talked freely. We did not miss any facet of opinion.

Most important were our long conferences with the two religious leaders, Sayed Ali al Mirghani and Sayed Aba al Rahman al Mahdi, at their respective homes, which really are palaces. You will remember that it was through an agreement of these rival religious leaders that the present national cabinet was formed and Sudanese independence accelerated. The Sudan has been an independent nation only since January 1, 1956. At present it is governed by a Supreme Commission with the Prime Minister elected by the national house of representatives, 68 of whose 98 members were elected by direct vote. In February of 1958 another election will be held and a permanent constitution adopted.

My conclusion is that the leaders of the Sudan have their hearts and minds set primarily on the development of their own independence, that there is a pretty general feeling of distrust of Egyptian designs, springing largely from a common but conflicting interest in the Nile River, and that the influence of the two great Arab religious leaders will go far in countering Soviet efforts to stir unrest among the people. The not-announced mutual defense treaty with Ethiopia is an indication of the trend.

Nevertheless, the Sudan is a most critical area. We cannot afford to make mistakes. It has been receiving no American aid, has shown willingness to help itself by spending (1957) $50 million of its own money in development projects. It now looks to the World Bank for a loan to build the Roseires Dam on the Blue Nile, opening another 1.2 million acres to irrigation. This is foreign aid on a sound banking basis.

TV Westerns Tell a Story—Our Diplomats Should Watch Them

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mrs. ST. GEORGE. Mr. Speaker, the following article appeared in that great newsletter, Human Events, on March 10.

I think its author, David Shea Teeple, has some sound advice for our diplomats, and maybe for our legislators.

It is a good thing when we want to know what people think, to find out what they read and, in our modern world, what they watch and see.

In the following article we get an answer that shows that the rank and file of our people have not changed very much and that they still believe in right and wrong, black and white, courage and cowardice.

They admire the same virtues that inspired their forefathers who came from many kindreds and climes to make up this Nation. For this, Mr. Speaker, we can be truly thankful.

TV WESTERNS TELL A STORY—OUR DIPLOMATS SHOULD WATCH THEM

(By David Shea Teeple)

In the otherwise gloomy skies of 1958 at least one cloud has a silver lining. The television westerns are telling a story that our diplomats and political leaders should watch.

Many conservatives viewed with alarm the spread of television, recognizing its tremendous capabilities for political indoctrination from Washington. The fireside chats of FDR, after all, were still a vivid memory; and we know who controls most of the radio and television industry in America. To put it mildly, they could seldom be characterized as conservatives.

For some time it looked as though such fears were well founded. For years the American people have been fed a TV diet of psychological dramas portraying the innermost struggles of man with his environment; sociological messages; arty shows, often effeminate in character; plays which ended so abruptly that the present writer (for one) had to inquire of his wife if the show were really over; sex rampant; the eternal triangle, etc.

We know, however, that the Madison Avenue hucksters are motivated by only one goal, namely, profits. The sponsor has got to sell his goods or he will seek another agent. Eventually, the Madison Avenue boys have had to respond to the public demand in TV entertainment or lose out to their more sagacious competitors.

The TV owners and pressure groups did not cause the present situation—it was forced on them by popular demand.

If you want to know what the people demand, take any TV guide for your area and make a compilation. The people want westerns—horse operas. In the Washington, D. C., area (presumably one of the most cynical and sophisticated regions in the country) between 7 and 10 p. m., there are 25 such programs scheduled every week. Just for the record let us list them:

Wells Fargo; Frontier Theatre; Annie Oakley; Have Gun, Will Travel; Tombstone Territory; Tales of the Texas Rangers; Jim Bowie; Judge Roy Bean; Footlight Theatre; Frontier Doctor; Wyatt Earp; The Californians; Wagon Train; Stories of the Century; Cheyenne; Colt 45; Trackdown; Gunsmoke; Zane Grey Theater; Restless Gun; The Lone Ranger; Wild Bill Hickok; Sheriff of Cochise County; Sugarfoot; Maverick.

In the event that anyone believes these to be children's programs, he has only to question his adult neighbors as to their viewing habits. (This does not deny similar leanings among the kids. Christmas trees last year sheltered realistic imitations of almost every type of lethal weapon. It appears that the owner of a nationwide concession of do-it-yourself United Nations peace conference kits would starve to death.)

The format of most TV westerns is basically the same. In fact, it is the same sort of thing that many of us watched in the Saturday matinees in the days of Tom Mix and Hoot Gibson—before we were taken over by a group of fuzzy-minded internationalists.

Did anyone ever see a western hero who lacked courage, integrity, honesty, patriotism, and devotion to his friends? Have you ever seen a horse opera that did not glorify the past of our Nation? Does the hero ever have any question in his mind about what is right and what is wrong? Does the show so much as ever imply that the hero will even consider any compromise with evil? As a viewer, do you ever have any question as to which will triumph—good or evil? Don't the villains have all the bad personal habits and can't you identify one just by looking at him? Isn't there a constant dose of respect for God, women, and the home?

Considering that millions of Americans watch these performances every night, can we draw any conclusions? In the first place this is propaganda—but self-administered propaganda. The public has told the hucksters that if they want to sell their cigarettes, cereals or automobiles via TV they have to present westerns. Furthermore, in the successful western the hero must be a rough-and-ready character, not a dressed-up dude rancher. If he draws his gun somebody is going to get hurt. Nobody pushes him around.

Unless this trend is merely a mechanism for total escape from reality, which the author doubts, wouldn't it be a good idea for our diplomats and political leaders to watch more of these shows? Maybe they could learn something. For example, would Wyatt Earp stop at some frontier equivalent of the 38th parallel when the rustlers were escaping with the herd? Ridiculous. Would Marshal Dillon refuse to allow his deputies to use shotguns for their own defense because of the terrible nature of the weapon? Ha. Would the Lone Ranger under any circumstance allow himself to be bullied and threatened by those who sought to destroy the principles by which he lives? Would Restless Gun or Jim Hardy of Wells Fargo attempt to buy friends who would not support them otherwise? Can you imagine Paladin of Have Gun, Will Travel standing aside while women and children were being massacred? (Dare I mention Hungary?) Can you imagine Cheyenne living in a perpetual state of jitters because he feared the next move of some gunslinger? Can you feature Judge Roy Bean releasing a murderer on some technicality devised by a slick lawyer? Would Wild Bill Hickok sell guns and whisky to the bad men? (Should we mention Tito?)

Our diplomats seem to be going one way while the American people are going the other. While the striped-pants boys appear to be bent on peace at any price, have the American people begun to indicate that what they want is a return to the fundamental virtues which made this Nation great—death before dishonor, justice, liberty, honesty, and human dignity?

The American people seem to have realized (if their taste in television is any indication) that peace with the bad men can only be accomplished if the bad men desire to reform and assume a decent position in society. The reformation must be demonstrated by deeds, and not by words.

The American public, according to these and other signs, wants to abandon the fuzzy-minded philosophy that can see nothing but grey, and return to the days when things were either black or white, right or wrong.

Maybe it would be a good idea to make TV westerns compulsory viewing for United States diplomats so they then will have a rough idea of how the vast majority of the American people are really thinking.

GOP Split Widens Under New Pressures

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. McCORMACK. Mr. Speaker, in my extension of remarks I include the following analytical and objective article written by William S. White and appearing in the New York Times of March 9, 1958.

GOP SPLIT WIDENS UNDER NEW PRESSURES

(By William S. White)

WASHINGTON, March 8.—The harsh and strange pressures of 1958, a congressional election year, are now rapidly wearing away the thin surface that long has covered a basic division between the Eisenhower and the orthodox Republicans.

It has always been a reluctant accommodation, drawn up as it was between the mod-

ern Republican East and the unmodern Republican heartland of the Middle West upon two factors: the simple power of the Eisenhower Republicans and the simple necessities of the older Republicans from beyond the Alleghenies.

Now the midwestern old man of the party, so to speak, is breaking away from what to him was always an unnatural arrangement.

To a significant degree, the Eisenhower Republicans, in and out of Congress, are now going it alone in their own party on a complex of policy whose indispensable points are foreign aid and reciprocal trade.

The other Republicans—who before this in the last 2 decades have more than once gone it alone—are doing it again, as they had not even attempted to do it since the moderns sealed in 1952 their capture of the party nationally.

The indispensables for these old Republicans are less foreign aid—in a good many instances none at all—and far more domestic aid, especially in the farm subsidies that the President wishes further to cut and in the western water development projects that he wishes to hold down rather than to upgrade.

DIVISION ON TRADE

Where the Eisenhower Republicans seek to foster more and freer world trade, the orthodox Republicans return, with ancient instinct, back toward more and more tariff protectionism.

They look homeward—as they have not done in many years—toward something very similar to what used to be called isolationism.

This gradual but now swiftening parting between the President and the old Republican conservative-to-right factions has, of course, been going on for some time during this Congress.

But how far it had gone had not been widely brought to public notice until this week's press conference statement by the President that he would refuse support to those Republican congressional candidates who did not agree with him on a short but important list of issues that in his mind expressed the big things.

The beginning, and indeed very nearly the end, of this list was made up of what he calls national security issues—foreign aid and strong alliances, foreign trade and stronger common western economies.

He said in effect, with unusual vigor for him—in view of the fact that he has never at any point been a sharp or consistent or determined party leader—that his point of toleration would be passed when Republicans defected on these issues.

CALLED TO TASK

The fact that he drew so clear a line, while arresting in itself, was less striking than two other considerations. One of these was that he recalled to the orthodox, for the first time in public, that they had lost Congress in 1954 after an Eisenhower presidential landslide of only 2 years before and had lost Congress again in 1956, in the middle of an even bigger Eisenhower presidential landslide.

The President's comments were in retort to some open and much sotto voce Republican congressional comment that Eisenhower coattails in some States would be worse than useless this time. The most important things were that he believed it necessary to say, this far ahead of November, what he did say, and that what he said caused no visible tremors in Congress. For the first time the orthodox Republicans there felt it safe not to respond to the highly infrequent admonitions of what had twice in presidential years been shown to be Eisenhower magic of a most potent kind.

BASIC SITUATION

For this is the basic situation that has developed here: The passage of time—that is, the fact that this is, after all, the President's last possible term—and the President's greatly reduced participation in Government have combined with other circumstances to permit the first real stirrings of two determined orthodox Republican efforts.

The first of these efforts is subdivided into what might be called public effort and private effort. The declared public aim of the orthodox congressional Republicans is to regain control of Congress. But no senior Republican known to this correspondent actually treats this as more than a kind of desperate hope.

The second, and real, subdivision of aim is to hold prospective Republican losses in Congress to the minimum. And it is here that the President is, quite honestly, seen by many orthodox Republicans as a great handicap.

They believe his legislative program could scarcely have been harder on Republicans, as one of them puts it, "if the Democrats had drawn it up themselves."

This is because the President's domestic budget makes less appeal to powerful "belly" voter interest, in every critical section of the country, than any in recent memory.

And the second of the twin major efforts of the orthodox is to reclaim the mind of the Republican Party and therefore its direction.

NO ROUTINE STAKES

Thus it is that the stakes are far beyond the fairly routine partisan stakes of any and every fairly routine congressional election year. For involved are not only such highly measurable and familiar matters as to what party shall have what seats and what committee chairmanships after November.

Involved also are deep emotional wounds to many traditional Republicans who see in the President's tenure what they believe to have been the failure of what in their eyes could have been the first properly conservative administration since Herbert Hoover's—and possibly the last in their lifetime.

They are determined that if their party is to enter a long minority era—and this is precisely what many of them fear—that then they or their kind of people must control what is left of it. This is, perhaps most of all, why they do not listen with great intentness any more to the President's advice for the future.

Recognition of Small Business

EXTENSION OF REMARKS

OF

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 10, 1958

Mr. McGOVERN. Mr. Speaker, recently I introduced a resolution (H. R. 480) which would give standing committee status to the House Small Business Committee.

It has seemed to me that the small businessman is the forgotten man in American Government. My measure would insure an increased attention to the problems of this segment of our economy.

I have always believed that the Main Street merchant and other small-business men play a most essential role in our national economy. They also represent an important part of our way of life. Americans have always believed that business opportunities should not be limited to the few and the powerful.

For that reason I have been increasingly disturbed by the mounting pressures on the smaller business elements of our economy. Small business failures have reached the highest peak since the 1930's. The trend toward consolidation and absorption of small-business units by the giants of industry and finance has reached the greatest tempo in a quarter of a century. There is an urgent need for greater tax consideration to small business, better enforcement of the antitrust laws and more attention in general to the many difficulties that beset the small business community.

I believe that shall business should be given the same committee status in the Congress that exists with reference to labor, agriculture, banking, and so forth.

I am very pleased that Mr. George J. Burger, vice president of the National Federation of Independent Business, a man who has given most of his life to the problems of small business, has seen fit to commend my bill. I am including Mr. Burger's letter to me of February 21, 1958, at this point:

NATIONAL FEDERATION OF INDEPENDENT BUSINESS,
Burlingame, Calif., February 21, 1958.

Hon. GEORGE S. McGOVERN,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN McGOVERN: I want to again express to you in behalf of small business our appreciation of your splendid action in introducing a resolution, H. Res. 480, which provides standing committee status for the present House Small Business Committee. We are glad of your action because now it is nonpartisan as a similar resolution was introduced by our good friend, Congressman H. R. GROSS.

Your action means a great deal to small business, whether it is in your State of South Dakota or any of the other States. It's a definite indication that there are men in Congress, including yourself, that have a very sincere interest in the welfare of efficient independent business.

It's rather strange and still most important that a similar nonpartisan action was taken in the United States Senate just 8 years ago when at that time the first chairman of the Senate Small Business Committee, the Honorable JAMES E. MURRAY, of Montana, Senator SPESSARD HOLLAND, and the late Senator Wherry of Nebraska, had action taken on their resolutions making that committee a continuing committee of the United States Senate for the first time in the history of the Senate. It is to be noted that we had the invaluable support at the time of the then Senate majority leader, the Honorable Scott Lucas.

Congressman McGOVERN, I can truthfully state to you that without the operation of the Small Business Committees, both in the Senate and the House, for the past 17 or 18 years, it goes without saying, many things in our economy could have happened, all tending to reduce the position of independent business.

Then it is significant and important to note that after these committees were constituted by the Congress, many of the old time Government agencies took a sudden interest then in small business and established within their respective agencies a small business section.

We believe now these committees have grown up and they are entitled to have the same standing as other standing committees in the Congress, Education, Labor, Agriculture, et cetera.

The most important part of having these committees standing committees of the Congress is that they will attract competent personnel who desire to make a career in the congressional committee.

We maintain the same opinion as it relates to the Small Business Administration, that agency being made a permanent agency of the Congress will attract more competent personnel who desire to make a career with the Government. In this you are to be complimented in the 1st session of the 85th Congress when you and 392 other Members voted to make the agency a permanent agency with the increased power, which should be of tremendous benefits not alone in your State but throughout the other 47 States.

I know that you will use your best efforts in having the Rules Committee act on your resolution so with our combined efforts, we can crown our work that this can be accomplished, making the House Small Business Committee a standing committee now in the 2d session of the 85th Congress.

Again, Congressman McGOVERN, thank you for your splendid action and you have made a major contribution for the future welfare of independent business.

With highest regards,

Sincerely,

GEORGE J. BURGER.

Ghana's First Birthday

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 10, 1958

Mr. O'HARA of Illinois. Mr. Speaker, on this, the first anniversary of the independence of the sovereign state of Ghana, I join with my colleagues in warm congratulation to Prime Minister Nkrumah, to the members of his government, to the distinguished membership of its legislative council and to all the men, women and children who comprise the population of a new nation dedicated to freedom and human dignity. In the doing of good works, in the ceaseless battle against unnecessary poverty and in the establishment of brotherhood as the foundation of all of man's relations with his fellow man, Ghana, her government and her people, always have the good wishes and the good wishes and the prayers of the people of the United States.

As a member of Chairman WAYNE HAYS subcommittee of the House Committee on Foreign Affairs that recently visited Ghana on a study tour, I wish to take this opportunity of stressing the importance to Ghana, to the entire continent of Africa and to the free world of the prompt commencement and completion of the Volta River project.

It is my well considered opinion, based upon my own study and observation, that if our Government continues to brush off this project, opening the area to a world of mineral wealth and industrial power, we will end by missing the boat. Africa is a continent of boundless resources and a future of limitless possibilities. Its development depends on large projects, all engineeringly sound and economically sound as well, and its peoples will not be held back. It is time that we came to that realization.

In the Belgian Congo there is underway a project that will entail a total cost of $2½ billion. The Government of the Belgian Congo is going it piecemeal rather than permitting willing American private capital to share in the investment.

Private capital has shown marked interest in the Volta River project in Ghana. At one time the aluminum people were reported ready to put $600,000 in the venture. It is completely beyond my understanding why some of our people in high posts of Government authority continue on the policy of a stick of candy for a poor orphan child instead of sitting down, as the Belgians do, trying to work out, mainly with private capital, perhaps with some initial encouragement from our Government, ways of going ahead with works that are vital to the future of Africa and offer investment fields that the experts I talked with united in calling attractive.

Mr. Speaker, I think it is fitting that on this first birthday of Ghana, I should conclude my remarks with the following editorial from the March 6, 1958, issue of the Chicago Daily Defender, the only Negro daily newspaper in the United States:

GHANA'S FIRST ANNIVERSARY

Ghana celebrates its first anniversary today as an independent nation which has emerged from the British-administered Gold Coast. While retaining its centuries-old traditions of culture and background, the new African state is moving with incredible momentum toward adopting the economic and political principles which have guided the destiny of the civilizations of the West.

Under Prime Minister Nkrumah, the people are enjoying a new surge of progress compounded of confidence in the future and determination to achieve their goal of economic stability and national security.

Although the country's economy is at present largely supported by one crop—cocoa—Ghana is rich in such extractive resources as bauxite, diamond, and gold. But it needs a large outlay of capital to work the mines, develop harbor facilities and increase its agricultural production.

Based upon a careful estimate of Ghana's potential productive capacity, the Canadian Aluminum Co. was a major partner in a financial pool that was to underwrite a $600 million loan to the Ghanan Government. Unfortunately, political ferment in the Middle East, which poses a threat to both north and west Africa, has undermined the prospect of such a loan. Even Uncle Sam is hestitating to extend that kind of assistance to Ghana.

The question of stability of Nkrumah's administration is another cloud that befogs the economic needs of the new nation. Under the British system to which Ghana has fallen heir, a vote of no confidence by the opposition party in the African Parliament can end overnight the Prime Minister's reign.

And the opposition to Nkrumah is growing. Whether he can ride out the coming storm is a matter of some concern among his local followers and overseas sympathizers. Had he been elected for 4 years, as under the American system, much confidence might have been placed in his Government. And a sizable foreign loan might have been arranged.

In any event, Nkrumah's intelligent leadership, his economic and educational reforms, his program of tribal unification have swept aside the old friction that Africans cannot govern themselves. Ghana is a shining example of the darker races' ability to lift themselves upward toward the light of democracy and self-salvation once the yoke of subjugation is removed.

Vocational Agriculture in Iowa

EXTENSION OF REMARKS

OF

HON. THOS. E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Monday, March 10, 1958

Mr. MARTIN of Iowa. Mr. President, the February issue of the American Vocational Journal published by the American Vocational Association, Inc., contains a salute to Iowa which succinctly but commendably tells the story of Iowa's excellent vocational agriculture education program. I ask unanimous consent to have printed in the Appendix of the RECORD the leading article in this section, entitled "The Journal Salutes Iowa for Vocational Agriculture."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE JOURNAL SALUTES IOWA FOR VOCATIONAL AGRICULTURE

Farming in Iowa is big business. The farms in the State produce approximately one-tenth of the food for the Nation. In 1956 the gross farm income was $2.2 billion. This was an average gross income per farm of $11,270, or almost twice the national average. Of the 200 high counties in the Nation in farm income, 37 are in Iowa.

The fertile soil and the temperate climate of the State are ideally suited to the growing of grains and forages and the raising of livestock. Iowa ranks first in corn, oats, hogs, and in marketing of beef cattle; second in soybeans, and third in butter and in marketing of sheep.

The people in Iowa are intelligent and industrious with good homes and communities. The total population is 2,707,830. There are 715,389 people living on farms, or almost one-fourth of the total population. Of the employed people in the State, 26.3 percent are in farming, 16.6 percent in manufacturing, and 57.1 percent in nonmanufacturing work.

Farming is changing rapidly with scientific developments. It is increasingly mechanized. Farms are increasing in size. The needs for capital are large. Business management is more important. Abilities and skills are needed to efficiently produce crops and livestock and use farm machinery and equipment.

There are 190,263 farms in the State with more than 286,000 tractors and 72,000 trucks. The average farm is 182 acres. The people employed on farms has decreased approximately 2 percent a year, except for the past 2 years.

The public schools of the State through their administrators and the boards of education have actively supported the vocational agriculture program. Starting with 6 departments in 1917–18, the program has grown to 303 departments for this year. With the further reorganization of school districts, 400 departments can serve the needs of the State.

As community educational agencies, the public schools are ideally situated to develop a farmer training program. They are close to farms and to people with resulting economies. Each year in the State, there is a need for some 8,300 people to replace those who leave farming, with 6,300 of these being farm operators. The new developments in farming further indicate the need for a training program. In this Nation with 16 people on farms producing sufficient food for themselves and 84 people off the farm, it is increasingly necessary that they be efficient producers of farm products and intelligent

custodians of our soil. The high school students enroll for vocational agriculture and three other courses each year. The 4-year training program in farming is based on the supervised farming programs of the students and the home farm situations. This includes livestock, crops and soils, farm mechanics, and farm management. The enrollment is 11,200 students this year. The number of graduates each year is approximately 2,400, not all of whom farm. Beginning in 1929, the FFA has been an integral part of the farm program. This organization provides leadership training and other benefits to members. All vo-ag departments have chartered chapters.

Young farmer classes are conducted by 60 schools this year with an enrollment of 1,200 out-of-school young men. As the high school graduates enter farming on a full-time basis, they desire training adapted to their needs. The training includes both classroom and individual on-the-farm work, based on their problems in becoming established in the occupation.

Adult farmer classes enroll 18,000 farmers in the 303 departments. The first adult farmer class in the State was held in 1921–22 with continuous growth in succeeding years. Since 1928, the enrollment in adult farmer classes has exceeded the enrollment in high school classes. An adult farmer advisory council works with the instructor in planning courses.

The typical vocational agriculture department has an enrollment of more than 100 persons. The average enrollments are 37 high school students, 20 young farmers and 60 adult farmers. It serves some 300 to 400 farms with an investment in land, buildings, farm equipment, livestock and supplies of ten to fifteen million dollars. The school provides an agricultural classroom with a reference library and equipment and a farm mechanics shop with hand and power tools. Each year, a program of work is planned for the department in the community. The reimbursement to the school amounts to about one-third of the instructor's salary and mileage.

The Veterans institutional on-farm training program has been conducted by public schools in the State since 1946. More than 21,000 veterans have received training in accord with Public Laws 346 and 550. This year, the enrollment is 3,800 veterans in 174 classes in 138 public schools. The values to individual veterans, to communities and to public schools have been large. This work has been coordinated with the vocational agriculture program in which methods, techniques and facilities were developed.

For the future, there is a need for a farmer training program to train the next generation of farmers and to keep farming in step with new developments. Our increasing population will require larger amounts of the products of the farms. The vo-ag program accepts the challenge.

Excise Taxes an Unfair Burden Upon Pharmacists

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Monday, March 10, 1958

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have received from Al Doerr, secretary of the North Dakota Pharmaceutical Association, relating to excise taxes.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NORTH DAKOTA
PHARMACEUTICAL ASSOCIATION,
Napoleon, N. Dak., February 22, 1958.

Senator WILLIAM LANGER,
United States Senate,
Washington, D.C.

DEAR SENATOR: Again this office is receiving numerous complaints of the methods employed by the Federal investigators or checkers of excise-tax records.

The papers are full of tax cuts one day, and in the next issue no cuts are in store in this session of Congress—be that as it may.

However, it appears to me that some adjustment should and could be made along the excise-tax level. It is without a doubt the most unfair, unjust piece of legislation on the books; placing undue burden upon the retailer. Is it a piece of legislation to create more jobs, or is it essential to the economy of the country? If it is the latter, why not transfer it to the manufacturers, where it rightfully belongs?

The original intent was for a temporary source of Federal revenue (wartime emergency). No one complained and took on this added responsibility as all good Americans should. Since then, there has been nothing but confusion and guesswork as to what articles are subject to tax, and the blame lies at the door of the Internal Revenue Service. Now after 13 years of the country being overrun with Government tax men, spotters or checkers, inflicting deficiency assessments against the retail druggists—an official list of taxable products has been published by the Internal Revenue Service. Even now this is not the answer, for there are considerable borderline products, which may or may not be taxable, depending how they are advertised by the manufacturer.

There are bound to be discrepancies, through pilferage, spoiled merchandise, broken or destroyed, and merchandise sold at sale on bargain counters.

I am personally acquainted with each and every pharmacist in this State and also know that each and every one is an upright citizen and a credit to this great State of ours; yet a large majority are assessed arbitrarily for supposed failures in remittance of collections.

The members of this association trust that you will exert every effort possible to either do away with this senseless tax burden or transfer same to the manufacturer.

Respectfully yours,
AL DOERR, *Secretary.*

Bulwark on the Defense: Carl Vinson

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 10, 1958

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include, herewith, an article appearing in the New York Times under date of February 27, 1958, titled "Bulwark on the Defense: CARL VINSON." Those of us who have served on the committee with this distinguished American know him and love him. He is a dedicated American to the cause of this Nation's security—to Mr. VINSON all other considerations are secondary. CARL VINSON is a tireless and an indefatigable worker. He inspires the Members who have the privilege of serving with him to work by leading the way. He spends many and long hours in his office, and he burns the midnight oil that America may be the leader of the free world.

Next to you, Mr. Speaker, CARL VINSON has served in the Congress longer than any other present Member. The article which I now insert, Mr. Speaker, while I may not agree with all it says, it only points to show what kind of American sits as chairman of the House Armed Services Committee. Mr. Speaker, I and every other single member of this committee love CARL VINSON, and we love to work for him because in working for him, we know that we serve better as better Americans.

The article follows:

[From the New York Times of February 27, 1958]

BULWARK ON THE DEFENSE: CARL VINSON

WASHINGTON, February 26.—When the Truman administration was looking around for a Secretary of Defense, the name of Representative CARL VINSON was mentioned as a possibility. Mr. VINSON, chairman of the House Armed Services Committee, heard about this and put it to sleep with this comment: "Shucks, I'd rather run the Pentagon from up here." This was taken largely as not being too much of an overstatement, even though made facetiously.

Today, in collaboration with the committee's senior Republican member, Representative LESLIE C. ARENDS, of Illinois, Mr. VINSON put forward a formula for more efficient operation of the Pentagon.

Characteristically, the Vinson reorganization plan was announced without prior notice and bills to put it into effect were introduced in the House before the Eisenhower administration had perfected its own proposals. Thus, whatever legislation is enacted is likely to be cut more closely to Mr. VINSON's pattern than to the administration's.

CARL VINSON is now in his 44th year in the House. At 74 years of age, he shows, according to other oldtimers, equal if not more vigor in national defense matters than when he entered Congress at the age of 31. Only one other present Member has served longer. He is SAM RAYBURN, of Texas, the Speaker, who beat Mr. VINSON to the House by 20 months.

DRESSES FOR COMFORT

Mr. VINSON, a large and hard-going man who dresses primarily for comfort, has headed military-affairs problems in the House since 1931, except when the Republicans got occasional control. His assignment was chairman of the Naval Affairs Committee until the armed services group was installed in 1947.

He has ruled this panel with a kindly but iron hand. Around Congress he is called the Swamp Fox, after Francis Marion, the South Carolina planter who became a general and master strategist in the War of the Revolution. Mr. VINSON has become as unpredictable and telling with his operations, it seems, as the original Swamp Fox.

Admirals and generals called from the Pentagon with supporting staffs frequently quaver as Mr. VINSON suspects flaws in their testimony. While he has campaigned effectively for more ships, planes, troops, and other military necessities, he has refused to accept Pentagon pleas willy-nilly.

He demands all the facts. He punishes admirals and generals, and the civilian officials who are their superiors, without mercy.

Mr. VINSON is either loved or feared at the Pentagon, but he is universally respected.

He has been the driving force in preserving military department requests for authorizations, even to a point of breaking through budget estimates. He also has prevented Congress from ignoring budget limitations in response to prevailing voter mood and appeal.

Mr. VINSON is a Georgian with a large nose on which he rests spectacles halfway down and looks over them instead of through their lenses. He represents a district almost wholly rural, but holds a powerful hand upon the expenditures that now take about 54 cents out of every tax dollar.

A TOUGH COMMITTEE

He rules a tough and determined committee of 40 members with a mixture of tranquility and Swamp Fox strategy. He is the target on occasion of heavy and angry bombing, by rebelling committeemen. He smiles through the attacks and then says: "All right now, let's get on with the business."

He makes a point of politely permitting any member to propose any amendment to a pending measure that he desires. But when the final committee votes are taken the amendments he doesn't like usually are in the ash can.

Mr. VINSON's home territory is Milledgeville, Ga., a city of about 10,000 population. He was born in this area on November 18, 1883.

He attended the Georgia Military College, and was graduated from Mercer Law School in 1902. He practiced law in Milledgeville, was made county prosecutor, went to the legislature and later served as a county judge. Then he came to Congress in 1914. In 1921 he married Mary Green, of New Philadelphia, Ohio. She died in November 1950, having been an invalid a long time. There were no children.

When he is at his 675-acre farm just outside of Milledgeville he indulges in no hobbies, except the reading of history, magazines and newspapers. His primary thoughts, he says, are Government and National defense.

On his farm he occasionally walks around looking for places where his fences might need mending. He does not have to worry about his political fences.

Mr. VINSON, with more than two score years of continuous public service on his record, started hinting some years ago that he might retire. He stopped talking this way when in 1955 Congress raised its own pay from $15,000 to $22,500 a year.

"Well," he observed, "if they are going to pay that kind of money in Congress, I think I'll make a career of it."

But those who know him best are firm in belief that he would not have retired if congressional pay had been reduced instead of being raised.

Small-Family Farmers

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent I am extending my remarks to include the following article by Father James L. Vizzard, vice president of the National Catholic Rural Life Conference and vice chairman of the National Council on Agricultural Life and Labor, in the March 1958 issue of Work:

When the food-surplus problem is being discussed these days, whether in Washington or elsewhere, a very curious argument often shows up. It usually goes something like this:

There are two surpluses that are plaguing us—too much production and too many farmers. The answer is both of these problems is simple and obvious. Just get rid of the surplus farmers. Antomatically you'll cut down on production and get rid of the surplus. And there'll be a bonus, too; with fewer people to divide up the farm income, there'll be more for each.

Very neat. But it doesn't take much analysis to spot the fallacy of the argument—and the insincerity with which it is often proposed. For the writers and speechmakers never suggest that we try to get rid of the really big producers—the top few percent of corporation farms that account for a large share of total production.

AID TO CORPORATIONS

Not only are no efforts made, or even suggested, to move them off the land and take the vast quantity of their production off the market, but they actually are encouraged and helped by our present kind of farm program and its administration.

It is rather the small, inefficient farmer that these spokesmen want to see squeezed out of agriculture by the hundreds of thousands, and they usually are not too squeamish about how it is done. Where the refugees go or what they do, what they gain or lose by abandoning the land, these high-minded speechmakers do not say and they do not seem to care.

FARM FALLOUT

One fallacious side of the argument can be spiked easily. The last census of agriculture, in 1954, listed 1,200,000 commercial farms which had yearly sales of less than $2,500. Suppose that all of these small-scale farms were closed out, and the families occupying them went to the city (where, unskilled and lost, they almost certainly would end up in the slums).

How much production would that remove from the markets?

Seven percent.

What would happen to the land they left?

Experience proves that most of it would be acquired by the nearby larger farm operator who produces more efficiently—and abundantly.

Net result?

Even greater surpluses.

Agricultural Income

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, March 10, 1958

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the GTA Daily Radio Roundup of the Farmers Union Grain Terminal Association for Monday, March 3, 1958.

There being no objection, the Daily Radio Roundup was ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP OF MARCH 3, 1958

Let's take a look today at some farm statistics. It seems timely to do so, because the Secretary of Agriculture arrived in Minneapolis Sunday for his talk today (Monday) before the farm forum sponsored by the Minneapolis Chamber of Commerce. Mr. Benson told newsmen that farm State Republicans will pick up votes by backing his program, and then he cited some statistics which, he said, show that the administration's farm program is working out well for farmers, and he said that farmers are backing him up.

The Secretary said that farm prices now are 8 percent above a year ago, and 11 percent above 3 years ago. He added that in 1957, per capita farm income hit $993, 10 percent above the $902 registered in 1956.

Now, these are official statistics. No one is arguing with them. But, it has always been our belief that the purpose of statistics is to clarify matters, not confuse them. That's why it is unfortunate that the Secretary does not explain the figures more fully, because they are confusing to many people who know other facts. Farmers and Main-Street merchants know that agriculture is in trouble.

From his high position in government, the Secretary certainly has the responsibility to explain, for example, that farm costs of operation have climbed to an alltime record high—more than 300 percent above the 1910–14 average. And, of course, that means that more of the money farmers take in goes out to pay for seed, machinery, gas, oil, and so forth. In fact, high, fixed costs of operations hit farmers so hard in 1957, that their net income fell down to an estimated $11.5 billion. It was $11.9 billion in 1956. And, we might point out that this net farm income, which is take-home pay for farmers was up as high as $17 billion 10 years ago.

It should be pointed out, too, that the Secretary's emphasis on farm per capita income rising to $993 is very misleading. The Governor of Minnesota's farm factfinding commission has brought out that fact that farm per capita income in Minnesota is less than half what people in the city get. City per capita income is well above the $2,000 level.

This is something that farm people understand full well, and they wonder why the statistics that the Secretary gives out in speeches don't explain the entire story more clearly. Quite naturally, farmers do not want to go on hearing statistics about conditions growing worse in agriculture. Farmers would like to be able to hear that a program is at work to bring price equality to agriculture. That's the basic problem—getting fair prices to keep family farmers on the land and a free agriculture in operation.

With this goal in mind, tens of thousands of Northwest grain farmers are working with their neighbors, and marketing their grain, GTA, the co-op way.

Imports Are Curbed

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. LOSER. Mr. Speaker, my attention has been called to a news article which appeared in the New York Times on February 28, 1958, concerning the action of the Australian Government in temporarily suspending imports of printed cotton textiles.

Since the importation of Japanese cotton textiles into our own country is a matter of much concern to me, and the cotton manufacturers of my section of the country as well as the whole Nation,

I am placing the article in the RECORD, under leave to extend my remarks, and hope that each Member of the House will read how Australia is handling the serious situation threatening her cotton textile industry.

The article follows:

IMPORTS ARE CURBED—AUSTRALIA BARS NEW LICENSES FOR PRINTED COTTON CLOTH

MELBOURNE, AUSTRALIA, February 27.—Japan has taken her first voluntary action to restrict exports to Australia under a trade agreement signed last year. At the same time the Australian Government has taken the unparalleled action of suspending temporarily imports of printed cotton textiles.

Trade Minister John McEwen said last night that the recently developed Australian cotton textile industry would be threatened with serious damage if the restrictions were not applied. Japan had agreed to limit printed cotton textile exports to Australia to 20 million square yards in the year ending June 30, but as a surge of imports from many countries developed the Australian Government decided to suspend the issuance of such import licenses pending a report of the tariff board on the textile industry.

Pedro Estrada—Undesirable Alien

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. PORTER. Mr. Speaker, John O'Rourke, the distinguished editor of the Washington Daily News, is also president of the Inter-American Press Association. In both capacities he is well qualified to write about the request that Pedro Estrada, recently deposed Himmler of Venezuela, be admitted into this country permanently. Under unanimous consent I include a news item from the Washington Daily News for Wednesday, March 5, 1958, and an editorial from the same paper.

PEDRO ESTRADA—UNDESIRABLE ALIEN

(By John Hoover)

Pedro Estrada, chief hatchetman in the overthrown regime of Venezuelan Dictator Gen. Marcos Perez Jiminez, has applied for a United States immigration visa, it was learned today.

The hated chief of secret police has made 2 trips to the United States on a visitor's visa since he fled to safety in Dictator Rafael Trujillo's Dominican Republic last January. Now he has returned to Ciudad Trujillo where he has asked consular officials to grant him permanent entry to the United State.

NO BIAS

A State Department spokesman said that no basis has been found to exclude Estrada under the pertinent laws and regulations.

Estrada was the iron fist with which Perez Jiminez ruled.

In the violence which accompanied the overthrow of the Venezuelan dictator, Estrada's officers were particular targets of the citizenry. Many of his secret police were literally torn to pieces, it was reported in dispatches at the time, so great was the hatred of Estrada's gestapo system.

United States laws and regulations regarding immigration list some 30 provisions for withholding visas from applicants, including conviction or admission of crimes involving moral turpitude. However, Estrada has never been convicted of such crimes, and the United States laws specifically exempt purely political offenses.

REQUIREMENT

A State Department spokesman said, however, that Estrada would be required to swear that he will not engage in any subversive activity directed against a foreign government while he resides in the United States.

If the provisional government that now rules Venezuela should prefer charges against Estrada it can seek his extradition under provisions of a treaty signed between the United States and Venezuela in 1922.

A spokesman at the Venezuelan Embassy said no word had been received there concerning Estrada's application. Consequently there have been no instructions from the Venezuelan Government to protest Estrada's entry or seek extradition.

Gen. Perez Jiminez has already been granted a United States immigration visa.

UNWELCOME

"Give me your tired, your poor,
Your huddled masses yearning to breathe free.
The wretched refuse of your teeming shore
Send these, the homeless, tempest tost to me * * *"

So says the inscription on the "Old Lady," as she holds her torch in New York harbor to light the way for homecoming tourists, hopeful immigrants and bloody-handed murderers and dedicated enemies of freedom.

Thirty years ago we were more choosey.

The Countess Vera of Cathcart came over in 1926, but such was the moral purity of the times that the authorities stopped her cold at Ellis Island. It seems she had a boy friend. She admitted it. That's called moral turpitude.

This is a sort of spiritual "b. o.," and the immigration laws provided that our fair land's innocent poppas and mommas be protected from it.

However, we see by today's story on page 4 that apparently, by holding our noses, policy is now more liberal. Not only has the enemy of freedom, Gen. Perez Jiminez, ousted dictator of Venezuela, been allowed to immigrate here, but we are preparing to welcome the head of his secret police, Pedro Estrada. This man was the head of the organization responsible for the jailing, torture, exile and death of many Venezuelans dedicated to freedom. So we will have not only his fat little boss, who reputedly fled with millions; we will also have Venezuela's discarded Himmler.

How does the verse quoted above apply to them?

They're not tired; they've been resting up in the Caribbean. They're not poor; they're rich. They're not homeless; their handsome hotel suites face the sea. True, they're tempest-tost, but they raised the storm themselves.

The Venezuelan people will say they certainly qualify as refuse.

In all fairness, neither the State Department nor the Immigration Service can be blamed for this state of affairs; it is the way the immigration law reads.

We're told our law requires the wrongdoing must either be admitted or a conviction must be on record. No Venezuelan court has yet tried them for their crimes against humanity. There is, furthermore, a sort of tradition among South American nations of allowing asylum to political exiles.

But there are still ways to keep them out of the United States, if the Venezuelan Government will start legal proceedings against them, as the Argentine Government has done against Peron. Perez Jimenez and Estrada can certainly be indicted, extradited, and tried.

Exiled Estrada came into the United States on a visitor's visa, and has gone back to that zoo of dictators, the Dominican Republic, to apply for a permanent immigration visa.

We hope our Government will not act too hastily. These men have, if political events in Venezuela mean anything at all, committed great crimes against the Venezuelan people.

Perhaps court actions will be instituted in Venezuela which will clearly show that which we already know; that they do not come to our shores with clean hands and that they are in the truest sense of the word, undesirable aliens, and the proven enemy of every ideal of liberty for which our country stands.

Incentives to Prosperity

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. HERLONG. Mr. Speaker, with leave to extend my remarks, I desire to include in the RECORD the following editorial by Mr. David Lawrence appearing in the U. S. News & World Report of March 14, 1958:

INCENTIVES TO PROSPERITY

(By David Lawrence)

It's an ill wind that blows no good, and the belated discovery in recent months that talented people should be stimulated by scholarships and other inducements to excel in the field of science applies as well to other fields of human endeavor.

The nation that seeks to standardize all individuals will find itself plagued by mediocrity.

The nation that carries the abstract principle of equality to the point where success is penalized retards its own progress.

The nation that restricts the gifted and the enterprising and virtually confiscates their earnings will not thereby accomplish the maximum good for the maximum number. In fact, the very opposite will be the result.

We can attain real prosperity by recognizing the importance of incentives to prosperity.

The biggest single incentive that could be applied in America today is in the field of taxation. The current recession and the economic convulsions of our times are directly related to the punitive rates in our tax system.

Low tax rates that are productive would bring in more revenue to the Treasury than it has ever received before. For when earnings are stimulated, the Government receives a larger and larger total—a share not only of the bigger profits earned by corporations but a share of the increased payrolls derived from full employment.

Tax revision cannot be achieved all at once, but a start can be made with a 5-year program which brings the individual tax rates within a range of 15 percent at the low point and 42 percent at the top and puts a ceiling on corporate taxes at 42 percent of net income. This is, in brief, the proposal made in the bill introduced by Representative SADLAK, Republican, of Connecticut, and Representative HERLONG, Democrat, of Florida.

The theory that individuals with large incomes spend it all on themselves is fallacious. There's a limit to the luxury that any individual can enjoy. Probably more than 90 percent of a rich man's income

above ordinary living expenses and charitable contributions is usually invested in productive enterprises, thus helping to build new businesses and create employment opportunities.

There is no sensible reason for stifling the initiative of the most successful individuals in our midst. Even the Moscow regime has discovered that, when everybody works for the government, there is lassitude and that money incentives become necessary to stimulate ambition and increase efficiency.

The worst mistake we make in our tax system is in the field of corporate rates. Here we expect the enterpriser who takes the risks of everyday business to be enthusiastic about his position as a minority partner. There isn't much incentive felt in being a 48-percent partner, while the Government takes the major share—52 percent—of all net income.

Apart from the psychological discouragements of such a disproportionate partnership between the Government and businessmen, this system fails to build the necessary surpluses for modernization and expansion of plant.

America would have an era of unprecedented prosperity if the tax structure were revised so that, by a reduction of 2 percentage points a year, for instance, companies could see in the next 5 years a chance to plan ahead with an assurance of a fair return on the money and energy invested by them. It would be the quickest way to restore confidence among businessmen and bring an early end to the current recession.

Until we become realistic about the handicaps in our tax structure, we shall not absorb the more than 900,000 new workers who are added to the total labor force every year. Thus, in January 1958, there were actually only 340,000 less persons employed than in January 1957, but we have not made it possible for business and industry to absorb the new workers. Our population is growing, and we must find a way to enable business to create more and more jobs.

A simplified-tax structure based on such incentives would solve our current problems and avoid "recessions" in the future. It would bring balanced budgets and large surpluses long before the 5-year period elapsed. It would pave the way for even lower tax rates in subsequent years.

Reform of the tax structure is necessary to cure us of our chronic recessions—but this will not come until an informed public opinion persuades the politicians that the best politics is sound economics.

It is the duty of our leaders, both political and economic, to take a long-range view and begin to lay the basis for a sound prosperity.

We must face up now to the need for a fundamental program that will enable America to stabilize prices, to arrest inflation and to create more and more job opportunities in an expanding economy.

Prime Minister Abdullah Khalil

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include an editorial from the March 8, 1958, issue of the Chicago Defender, as follows:

MEET SUDAN'S ABLE PRIME MINISTER

The Egyptian-Sudanese dispute which Emperor Haile Selassie, of Ethiopia, prevented from reaching a crisis point, has brought to the fore one of the leading personalities in the contested territory. It is Abdullah Khalil, the Sudanese Prime Minister, a tough soldier-politician known for bluntness, horse sense and courage.

It was his firm prowestern policy that caused his government, last year, to turn down a Russian offer to buy the Sudan's whole cotton crop in exchange for arms. Khalil quickly realized the sinister motive that prompted the Soviet bid. It was clear to him that the offer was in keeping with Russia's policy of stirring up trouble in sensitive areas.

In turning the Russians down, the Sudanese Prime Minister said pointedly that his country wasn't planning to fight anyone, that Sudan needed farm equipment and not tanks. Though the politicians who belonged to the opposition party were overtly critical of this stand, Khalil was so determined to keep Russia out of the Sudan that he staked his whole political future upon that decision.

He is a good administrator who believes in a pay-as-you-go policy in an area noted for fiscal fantasy in government. His enlightened leadership has keep Africa's biggest new nation from being a helpless pawn on the chess board of international intrigues. He is not unaware of Egypt's design to annex his country, which is four times the size of Texas and with a population in excess of 10 million.

There are pro-Egyptian factions among his countrymen who stand ready to compromise their nation's independence by bringing the Sudan within the orbit of President Nasser's newly formed United Arab Republic. But Khalil is a fearless nationalist who wields enough power to smash any plot against the Sudan as a sovereign state. With a little aid from the Western bloc, the Sudan may become a bright star in the constellation of free democratic states.

Voice of America Should Continually Expose to the People of Central Asia Soviet Propaganda Against Alleged Western Colonialism While It Imposes Brutal Imperialism on Them

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. JUDD. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article by Mr. C. L. Sulzberger, from the New York Times of March 1, 1958:

MOSCOW'S HUGE COLONIALIST HOAX
(By C. L. Sulzberger)

BELGRADE, YUGOSLAVIA.—One of the most important cold war propaganda centers is Tashkent, capital of the Soviet Republic of Uzbekistan and largest city in all central Asia. From that sprawling, jerry-built metropolis within sight of the great Tien Shan range of mountains that divides the U. S. S. R. from China, a powerful radio disseminates Communist propaganda in most of the languages of the Orient.

The main burden of this message is one of nationalism and hostility to the western colonialist powers. Above all, Islamic peoples, especially the Arabs, are advised to heed Moscow, their benevolent, disinterested friend. And when Asian or Moslem dignataries visit Russia they are invited to the Uzbek capital. It is displayed as a showpiece of non-European, Asian-Soviet benignty.

The Kremlin is rarely inhibited by paradox. Therefore it sees nothing contradictory in exhorting underdeveloped peoples elsewhere to rise up against colonialism from Tashkent, administrative center of one of the largest existing colonial empires, that of Russia.

For, in fact, what is known as Soviet Central Asia, embracing an area larger than Europe and inhabited by non-Slavic, Turkic and Iranian peoples, is held in thrall by Moscow's own imperialism. The old Mohammedan and Asian cities of Tashkent, Bukhara and Samarkand are governed by atheistic Europeans sent eastward to provincial tasks much as Christian British officials once went eastward to Hindu India.

The incongruity of this situation is splendid. Tashkent, which has its Russian quarter much as Delhi once had its English quarter, which has its garrison of European battalions, and which is administered in all but name by non-Asians, challenges Asia and Africa to rise up and cast out remaining vestiges of foreign control. And what do we do to expose this hoax? The truth is we do pitifully little.

VOICE OF AMERICA PROGRAM

Our only official radio propaganda is transmitted by the Voice of America. This has budgeted precisely $40,178 this year for broadcasts to the unimaginably immense realm of Soviet central Asia. A pittance is spent to maintain 1 daily 15-minute program in the Uzbek language sent from Munich.

Our Uzbek propaganda service has 8 employees, 3 of whom are American citizens. Its single meager message is all our Government sponsors to tell the millions of Soviet Asians, only some of whom are Uzbek, anything about democracy. Compared to the torrent of "anticolonialist" words emitted by the colonial Tashkent radio it is as if one likened a flea to a grizzly bear.

Nor do other non-Communist countries pay much heed to what goes on within the U. S. S. R.'s own imperial domain. London's BBC says nothing, in their own languages, to the Kazakhs, Turkmenians, Kirghiz, Tadzhiks, and Uzbecs ruled by Russia. Nor do neighboring and racially akin Turkey and Iran. They fear Moscow complaints that they might seem to sponsor irredentist movements. Only Pakistan, in Turki broadcasts, occupies itself with the problem.

To be sure, a private American organization, Radio Liberation, seeks in some degree to fill the gap. For some years it has transmitted in the five principal languages of Soviet central Asia by shortwave from Lampertheim, West Germany. But these programs are generally weak and fragmentary because of successful Russian jamming. Radio Liberation concedes: "We are not producing as strong and as reliable a signal as our engineers would like."

SOVIET TACTICS IN TURKESTAN

Soviet authorities are trying to make the inhabitants of what was known as Turkestan forget they ever had an individual historical heritage. This was one no more connected with the bureaucrats of Moscow than the historical heritage of India was connected with the bureaucrats of London prior to the British Raj.

In its transmissions, Radio Liberation says, "Major emphasis is placed on the Turkestani charge that the Soviet Union—despite its constantly reiterated claims of friendship for colonial peoples—has itself hypocritically erected history's greatest colonial empire in which their own country [Turkestan] is the largest component. Broadcasts disclose, among other things, how the U. S. S. R. oppresses its inhabitants as well as exploits the resources of the homeland."

Nobody, of course, likes the idea of a cold war. Most people hope their statesmen can

eventually get together and arrange some basis for a harmonious peace. But the chances of this happening in a hurry are not brilliant.

In the meantime it is absurd for the free nations to sit by almost idly while the Kremlin, from its main colonial capital, boasts that only the Kremlin fights against colonialism. We know the opposite is true. But do we do enough about it?

For example, shouldn't we ask our friends in the Baghdad Pact to supplement the meager description of our views sent out by Lampertheim's tormented engineers? And shouldn't the Voice of America be given more help to tell our tale? Right now it is draining the Caspian Sea with a teaspoon.

The Reciprocal Trade Agreements Act

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. HERLONG. Mr. Speaker, with leave to extend my remarks, I desire to include in the RECORD the following editorial by Mr. Fred Booth, an editorial writer for the Daytona Beach News Journal, and appearing in the Daytona Beach Evening News of February 24, 1958:

RAYBURN SOUNDS A WARNING

Speaker RAYBURN said something last week which underscores the folly of taking anything for granted. There's a chance, he said, that the bill renewing the Reciprocal Trade Agreements Act may be defeated this year in the House.

This session the bill provides for 5 years' renewal of the reciprocal trade program. The last time Congress renewed the program was in 1955—for 3 years. The program expires June 30, this year, unless renewed.

Protectionists fought in 1955 against renewal of the trade program, yet it passed. From the time the Roosevelt administration introduced and sponsored the program in 1934 down to the last time it came before Congress, protectionists have fought it with richly financed lobbying and propaganda.

Yet each year the proposal came before Congress it passed, and the process of cutting import tariffs has kept this country in a fortunate trading relationship with other countries. Maybe the fact that the program has remained in force for 24 years has led many people to take for granted that it will continue in force.

For this reason RAYBURN's warning that the program is in peril of defeat was fortunately timed. It gives plain citizens and business interests a chance to rally in support of a policy which is essential to our continued friendly relations with other non-Communist countries, and which may be essential to our continued survival.

Support of the reciprocal trade agreements program is bipartisan. Republicans who favor it on conviction do not mind too much the fact that it was fathered first by a Democratic President. Democrats who favor it on conviction aren't bothered by the fact that President Eisenhower has recommended its passage.

On the other hand there are Republican and Democratic foes of the bill. They represent protectionist interests which regard any measure of liberalism in import trade as injurious to a few domestic industrial and commercial interests.

For this reason the proposal faces three dangers. One is the possibility of amendment virtually killing the effect of any bill that may be passed. The second is the danger of reducing the time the law shall stay in effect. The last time the law was good for 3 years. The renewal should be for 5 years. Its term may be cut to 1 year. Finally, the bill may be defeated altogether.

Speaker RAYBURN truly says it would be mighty bad for the country for the program to be defeated. RAYBURN and all other Members of Congress know Russia is making extraordinary efforts to bring other nations under the sway of its influence, by drumming up trade and by making easy, low-interest loans to underdeveloped countries.

All Congressmen know one of the most effective ways by which this Nation can strike up friendly and strong relations with other countries is to lower trade barriers so they can sell their products to us and buy ours. Only by this means can we improve our export trade. Moreover, the agreements would make it easier for the United States to obtain needed raw materials from other countries through the stimulus of international trade.

Recent developments in Europe have sharpened the need of a 5-year renewal of the program. Sinclair Weeks, Secretary of Commerce, said recently:

"Such a renewal is necessary to help American industry and agriculture in developing their relationships with the newly established European Economic Community. The six members of the new community—Belgium, France, Germany, Italy, Luxemburg, and the Netherlands—last year bought nearly $3 billion of our exports. Under the arrangements which they have agreed on for the new community, they are to have a common external tariff applicable to imports from other countries.

"The steps toward development of their new tariff will take shape gradually, and important developments are expected to occur during 1962, toward the end of the 5-year renewal period which we propose. During this time we must make careful and exhaustive preparations and conduct detailed negotiations. * * * In order to insure the effective participation of the United States and to promote our interests throughout this important period of development of the external tariff of the European Economic Community, we need a 5-year extension of the trade agreements legislation with adequate authority to reduce tariffs * * *.

The trade-agreement program has been a unique and beneficial undertaking by our country in the trade field. Its continuation is essential to preserve our gains and to lead the way to a broader realization of the mutual benefits that it makes possible for us and for our free-world partners."

Two points in the reciprocal trade issue are worth bearing in mind. One is that renewal of the program would help materially many more people and businesses than it would hurt. The other is that the program is a must in the great enterprise of achieving closer and stronger friendships with other powers.

Culture, Not Race

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. O'HARA of Illinois. Mr. Speaker, it long has been my practice on Sunday afternoons to include in my reading the editorial columns in the Chicago Defender. By unanimous consent I am extending my remarks to include Louis Martin's column in the Defender of March 6, 1958, as follows:

Dr. St. Clair Drake, the distinguished anthropologist of Roosevelt University, touched upon an idea in a housing discussion last week which fascinates me no end. He spoke before a group called by the Chicago Urban League to consider the critical housing issue.

Of courses, Dr. Drake is a very provocative talker and he has a keen, lively sense of humor which is delightful. Then too, he looks like an egghead with a penetrating look and a quizzical grin on his broad face. He punctuates his remarks with quick decisive gestures like many teachers who know how difficult it is to get a new concept through the average skull.

In speaking of the critical and complex housing situation, Dr. Drake made it clear that he has no easy solutions to the problems. Almost as an aside, however, he brought up the possibility of the allocation of certain areas of the city in which some cultural groups might be free to follow their own ways without upsetting the rest of the community.

Dr. Drake did not explore this suggestion very far, but he stated that the thought had occurred to him that some of these cultural islands might serve a worthwhile purpose until such time as the urbanization process was complete and all groups could live together in peace.

In this connection he said it has become fashionable now to refer to hillbillies as "Appalachian whites."

In Chicago, for instance, immigrants from Puerto Rico, Mississippi plantations, the Ozarks, and Appalachian foothills have been pouring in for years without any planning.

Most of these people are not only rural and nonurbanized, but some are prepared to resist any efforts to change their style of living. They want the advantages of the city and at the same time they wish to keep as many of their folkways as possible.

I suppose the old ghettos, little Italys, Corktowns, etc., served some such purpose for the great tidal wave of immigrants who came from Europe a few generations ago. As I understand the suggestion of Dr. Drake, however, the islands he has in mind would be basically cultural and with planning most of the evils of the ghetto would be avoided.

Today, immigrants with vast cultural differences and strange styles of living are scattered throughout the general community. For instance, a fellow who hankers to strum his guitar until 3 o'clock in the morning is living next door to an old conservative Chicago family that prefers organ music in the daytime and at church.

Dr. Drake would be the first to admit that there would be enormous practical difficulties in experimenting with the sort of program that he has in mind. Nevertheless, I share his interest in the idea even if it does seem a little farfetched.

In the first place, I think segregation on the basis of race or skin color is wrong anyway you look at it. Jim Crowism simply has no merits in my book. Cultural ties are more important than racial ones.

A Negro physician and a white physician have more in common than either one of them would have with an unlettered sharecropper of either race. Here intellectual and cultural interests transcend the small matter of race and skin color.

If the city of Chicago were divided up into cultural groups rather than racial groups all of the existing ghettoes would disappear. Then too, the element of force would be eliminated because the cultural groupings would be voluntary rather than compulsory. Dr. Drake is concerned primarily with the immediate problem of what ot do with these hordes of difficult people who insist on liv-

ing in their style and refusing to conform to urban life.

Whatever you may think of Dr. Drake's idea, at least, he has been doing some original thinking on a very serious issue. Everybody is jumping up and down, tearing his hair out on the housing issue, but very little is being accomplished. Racial tensions are building up and each conflict leads to another. Housing is in short supply, Jim Crowism makes it even worse and the population is increasing. Something is going to have to give.

It was Dr. Drake, however, who gave me the first idea what I might do about that fellow who likes to drink beer from a can while running barefoot up and down the block in the middle of the night. Let's get some "islands."

The United States Army Band

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mrs. ROGERS of Massachusetts. Mr. Speaker, while the American public is understandably and properly preoccupied with those ramifications of national defense dealing with such critical areas as the combat potential of the component armed services, frequently overlooked is the continuing contribution of the military to the scene of American culture.

Such an outstanding example, well-known to Members of Congress and residents of the Washington area, is the internationally known United States Army Band, led by Maj. Hugh Curry, of Cambridge, Mass. One of the services' quartet of great musical organizations stationed in this city—the others of equal fame being the Marine Band, Navy Band, and Air Force Symphonic Band—the United States Army Band is an active contributor to the cultural life of the National Capital, performing at frequent intervals before the public, during the summer season at such locations as the steps of the Capitol and the Watergate and, during the midwinter series of concerts, at the Interdepartmental Auditorium.

Maj. Hugh Curry, the leader and commanding officer of the United States Army Band, the official representative band of the Department of the Army is the son of the late Hugh Curry and of Alice Duggan Curry. He attended St. Paul's Parochial School in Cambridge, the Cambridge High and Latin School, and graduated from the Boston University College of Music with the degree of bachelor of music. Just prior to entering the Army of the United States, he was prominent as a teacher of music at Rindge Technical School in Cambridge, Mass.

Hugh Curry entered the Army in 1941 and served as an enlisted man in the band of the 101st Field Artillery of the 26th Division, Massachusetts National Guard, until June of 1942 when he entered the Army Music School for Bandleader Candidates in Washington. He was later appointed a warrant officer band leader, and subsequently served in the United States Army Band as its assistant leader. The band was at that time assigned to Allied Force Headquarters of the north African theater of operations in Algiers.

On October 1, 1945, Assistant Leader Curry was designated acting leader and commanding officer of the Army Band, shortly after which he directed the band on a highly successful concert tour of the United States in the interest of the victory bond drive sponsored by the United States Treasury Department. On January 4, 1946, Chief Warrant Officer Curry was appointed leader of the Army Band to succeed Capt. Thomas F. Darcy. He was commissioned a captain in the Army of the United States in 1946, and in 1952 was promoted to the rank of major.

Among the first acts of Gen. John J. Pershing on becoming Chief of Staff after World War I was the creation of the United States Army Band.

Although the General Headquarters Band of the American Expeditionary Force was organized in France in 1917 by General Pershing, then commander in chief of the AEF, it was only temporary and broke up soon after the armistice.

Partly because of that unit's outstanding record during its brief existence and partly because of a genuine need for a permanent military musical outfit, General Pershing brought the United States Army Band into being in 1922.

The United States Army Band quickly assumed its important role in local, national, and world affairs. The general's faith and judgment were increasingly juistified down through the years, and to the present day it has become an inseparable part of the pride and colorful tradition of the United States Army.

It is made up of more than 100 bandsmen—the cream of the Army's musicians. Before their incorporation into military service, they played in well-known orchestras and dance bands throughout the country, and many of them are products of America's finest music schools. Names of brothers are on the rolls and there is also a father-and-son team. Nucleus around which the organization revolves is a respected, slowly dwindling little group of men who are all onetime members of the "Pershing's Own" 1917 band.

The United States Army Band is often called on as the lead unit in important parades. It has taken part in parades commemorating national holidays, both here and abroad, and in parades of welcome for returning heroes. A partial list of the more noteworthy of these parades gives some idea of the scope of its job as the United States Army's representative musical outfit.

For example, there were Bastille Day, 1943, in Algiers; Armistice Day, 1944, in Paris; Dwight D. Eisenhower's homecoming in Washington in 1945, and the homecoming of the 82d Airborne Division in New York City in 1946.

It has marched in the glittering inaugural parades of five of our Presidents—Calvin Coolidge, Herbert Hoover, Franklin D. Roosevelt, Harry S. Truman and Dwight D. Eisenhower; and it has solemnly led the way in the funeral corteges of Warren G. Harding, Woodrow Wilson, and William Howard Taft.

On July 19, 1948, the band once more marched slowly to the muffled beat of drums. On the way to his final resting place in Arlington National Cemetery was its gallant progenitor, Gen. John J. Pershing.

Simple ceremonies at the Tomb of the Unknown Soldier in Arlington National Cemetery and elaborate, formal receptions for visting dignitaries are frequent highlights in the United States Army Band's notable career. Other, more diversified activities for which it is called on are the annual Cherry Blossom Festival in Washington, the opening baseball game of the American League season when the President traditionally tosses out the first ball, and national meetings of patriotic groups like the Daughters of the American Revolution, American Legion, Veterans of Foreign Wars, and Gold Star Mothers.

The United States Army Band has been a regular contributor to radio and television and it has made countless broadcasts over the country's major networks since it first went on the air in 1923. Some of its better known presentations have been Division Dairy, This Week in History, and Campus Salute. Its annual Freedom Sings series of concerts, featuring internationally famous guest stars, for a number of years has been a steadily popular Tuesday night feature.

During World War II it traveled extensively overseas, entertaining American and allied troops and civilians, and from June 1943 until its return to the United States, 2 years later to the month, it gave more than 500 performances in 17 African and European countries.

Allan E. Pestcoe, Science Talent Search Award Winner

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. FASCELL. Mr. Speaker, Allan E. Pestcoe, 17, a high-school senior from Miami Beach, Fla., has been in Washington February 27 through March 3, as one of 40 most promising research scientists in America's high school selected in the 17th annual science talent search conducted for the Westinghouse science scholarships and awards by science clubs of America. He was invited to Washington for an all-expense trip along with other winners from 19 States and the District of Columbia chosen by judges from among 25,039 contestants.

As his qualifying scientific projects, he investigated the effects of 2,4-D, a commonly used plant spray, on the absorption of sulfur in plants and has determined the movement rates of sulfur and phosphorus in leaves. Both projects were carried out in the radioisotopes laboratory in his high school and are

reported in his required search paper. As student director of the laboratory, he has helped to design and build a gamma-ray chamber and to adapt Atomic Energy Commission handbook procedures to the equipment available to the students. He is now planning the construction of a small heavy-ion linear accelerator.

The son of Mr. and Mrs. Harry Pestcoe, 6375 Indian Creek Drive, Miami Beach, Allan would like to attend the California Institute of Technology following his graduation this year from Miami Beach High School.

I feel his unusual scientific ability is certainly well evidenced by these very able activities. In this era of great scientific emphasis, I take pleasure in congratulating him and commending his efforts to my colleagues' attention.

Extension of the Reciprocal Trade Agreements Act

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include a very fine letter supporting the extension of the Reciprocal Trade Agreements Act sent to me by Ernest Henderson, president of the World Trade Center in New England, Inc., 470 Atlantic Avenue, Boston, Mass. Mr. Henderson is one of the outstanding businessmen in the United States.

The letter follows:

THE WORLD TRADE CENTER
IN NEW ENGLAND, INC.,
Boston, Mass., March 5, 1958.

Hon. JOHN W. McCORMACK,
House of Representatives,
Washington, D. C.

DEAR MR. McCORMACK: The World Trade Center in New England strongly advocates a 5-year extension of the Trade Agreements Act which expires on June 30 of this year.

We really favor a much longer extension than the one requested by President Eisenhower but will go along with this proposal as the very barest minimum requirement at this critical time.

Under the Trade Agreements Act the United States has participated greatly in the worldwide exchange of goods and has substantially expanded its markets abroad by reciprocally lowering tariff and trade barriers and liberalizing trade regulations.

Foreign trade has poured more than $30 billion annually in recent years into the lifestream of our economy and it is estimated that the families of at least 4,500,000 American workers gain their livelihood from this important area of economic activity.

It is indeed unfortunate that we do not stop to realize that our exports play such an important role in our economy and prosperity and that exports are geared precisely to imports since others must sell to us in order to buy from us. Our business friends overseas must be able to earn the dollars they spend for our products and they can only do so if we provide them fair and reasonable access to our markets.

Great and important, however, as foreign trade is to us, it is of far more importance to other friendly nations of the world. Foreign trade averages about 5 percent of our gross national economy, but the corresponding figure for Holland is 40 percent, for West Germany 15 percent, for Great Britain 18 percent, for Italy 12 percent, and for Japan 15 percent. The future growth of many countries depends, in great part, on expanding trade with each other and us.

Every time we move to impede instead of liberalize world trade we not only hurt ourselves but we alienate more friends abroad. Unless we pass the Trade Agreements Act we are playing directly into the hands of the Soviets who, with their full and immediate control over trade policies, are in a position to fill every vacuum we create and win every battle we lose.

In addition, we seem to forget that Russia has accelerated its productivity to the extent that, within a period of as little as 20 years, it will have caught up with and, perhaps, surpassed the United States. If Russia retains her controlled economy and we do nothing to meet this challenge we will be unable to compete with her in foreign markets and we will be obliged to yield victory in the cold war by default.

The development of international business is the reason for the existence of the World Trading Center and at this moment we are alarmed that all we are striving for and all the United States has worked for in promoting trade throughout the world for more than a generation can be lost and that we can hand the Soviet Union another cheap and significant victory.

The World Trade Center in New England, having given this matter careful consideration and study, firmly believes that the extension of the Trade Agreements Act is one of the most important matters facing the Congress today. It deserves the support of all of the people because its passage will serve notice on Soviet Russia that we are vitally interested in world development which is the basis of peace and understanding and that we will bend every effort toward that end.

The World Trade Center in New England respectfully urges you to support extension of the trade agreements program.

Sincerely yours,
ERNEST HENDERSON,
President.

Hearings on H. R. 10293

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. HARRIS. Mr. Speaker, on Friday, March 7, I issued the following release with respect to hearings to be held on H. R. 10293, a bill to establish a national scientific reserve fund, introduced by the gentleman from Illinois [Mr. DAWSON]. In view of the great interest which has been manifested by many scientists throughout the country, I would like to serve notice that the Committee on Interstate and Foreign Commerce stands ready to hold hearings on this legislation as soon as possible after reports have been received on this bill from the departments and agencies of the Government.

The text of the release is as follows:

Congressman OREN HARRIS, Democrat, of Arkansas, chairman, House Interstate and Foreign Commerce Committee, announced today that hearings would be scheduled on H. R. 10293, a bill to establish a national scientific reserve fund, as soon as possible after receipt by the committee of reports from the various departments and agencies of the Federal Government, setting forth their views with regard to this legislation.

The committee has been advised that the National Science Board of the National Science Foundation will meet on March 14, 1958, at which meeting the Board will consider the position of the National Science Foundation with regard to this legislation. Requests have been made of the departments and agencies of the executive branch to submit their views on this legislation as soon as possible so that hearings may be scheduled promptly on H. R. 10293.

The Committee on Interstate and Foreign Commerce is aware of the great and urgent need for additional support for basic research. As a matter of fact, hearings were begun by the committee on January 24, 1958, on this very subject in the course of which Dr. Detlev Bronk, Chairman of the National Science Board and President of the National Academy of Sciences; Dr. Alan T. Waterman, Director of the National Science Foundation; and Dr. Paul M. Gross, Chairman, Executive Committee, National Science Board, testified.

Since introduction of H. R. 10293 by Congressman DAWSON, Democrat, of Illinois, the Committee on Interstate and Foreign Commerce has received hundreds of communications from scientists who are active at universities and research institutions all over the country, in support of this legislation. These communications indicate the great interest in this legislation on the part of all those who are seeking to keep the United States ahead in basic research.

Let's Quit Soil Bank Fiasco, Brannan Plan Is Much Better

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. WIER. Mr. Speaker, in the Springfield Advance-Press, Springfield, Brown County, Minn., Thursday, March 6, there appears a fine editorial written by Aug. G. Erickson. It deals with the present farm program and is a very thought-provoking article and I should like to call it to the attention of all Members of the House. Therefore, I ask that it be printed in the Appendix of the RECORD.

The editorial follows:

LET'S QUIT SOIL BANK FIASCO, BRANNAN PLAN IS MUCH BETTER

Paying farmers for taking land out of production is wasteful. Just as it is uneconomic to pay people for being idle, so it is a waste of money to pay for letting land lie idle. It was hoped that the soil bank idea would serve to cut the surplus, but it hasn't proved effective. Some landowners received fabulous checks—and what did they do to deserve them? They did nothing.

Farmers should be paid for producing food and fiber, not for not producing. The Brannan plan would do away with this foolish idea of paying for waste. The Brannan plan would save the small farmer and the marginal farmer and shift the responsibility for surpluses to those responsible for them, the bonanza farmers. It would solve the surplus problem.

Don Brown, Waseca editor, who was defeated in the recent first district primary for the GOP nomination, said last week: "Support benefits should be based on production, not on acreage. Too, we should have a graduated scale of support to prevent giant operators walking off with $100,000 Government checks. Our income tax payments are graduated according to the size of our income."

These ideas would fit perfectly into the Brannan plan, which plan Mr. Brown said "was not all wrong" when he filed for Congress.

Assuming that subsidizing the farmer is fair, since we subsidize labor and industry with the protective tariff and provide unemployment insurance for idle workers, the Brannan plan provides the simplest means of accomplishing this.

Give the little fellow enough to provide full parity for what he produces and sells on the open market. If he raises 1,000 bushels of wheat for which the elevator pays him $1.50 a bushel and parity is $2 a bushel, the Government pays him $500. That he has earned, if he is entitled to parity, and who says he isn't? Same with all his products up to a limited amount. For a certain amount of farm income, say $5,000 (just as an example) pay enough extra to give him parity. On the next $5,000, pay enough to give him 90 percent of parity. Then 80 percent, 70 percent, 60 percent, etc. That means that the farmer who farms on a large scale may have to curtail operations, perhaps sell some land to small farmers, reversing the evil trend of the past decades and putting farmers back on the land. At least it should stop the migration of farmers from the land. Nobody need worry about that big farmer, either. He can take care of himself. He's the one that caused the surplus in the first place, the man responsible for the problem.

In the end everybody gets his subsidy in dollars, so what difference does it make whether it is squeezed out of the public through tariff and labor laws or paid in cash by the Government?

Under the Brannan plan the farmer sells on the open market and receives from the Government the difference between what he gets and what he should have gotten in order to receive parity. Everyone admits he should get parity. President Eisenhower said at Kasson he should get 100 percent of parity, while the Democrats had been guaranteeing him only 90 percent. If prices are low, the consumer benefits. Price supports hurt the consumer.

Remember, there's always a market for farm products, at some price. No matter what the farmer ships to the livestock market, it gets sold. The elevator always buys his grain at the prevailing price. The small farmer won't have to worry about what that price is. He will get his parity. The bonanza farmer may find the price too low to continue producing on a large scale. He will cut his acreage, and he won't get paid for it.

The result of such a plan would be more small farms, more people remaining on the farm, where they will be happy and fairly prosperous, instead of glutting the labor market by moving to the cities, already plagued by unemployment.

This plan will save the marginal farmers of northern Minnesota. They are having a rough time now. It will stop the trend in southern Minnesota of farmers buying adjoining farms and tearing down the building which may be progress of a certain kind, but it is not social progress. When you tear down a farm house that once housed a contented farm family, you are reversing social progress, banishing a neighbor and taking from the small town a rural customer. And to what purpose? To build up the big cities, already overcrowded.

Only this Brannan plan will put more people on farms. In time it will result in the conversion of the vast cutover region of northern Minnesota into a populated and substantial agricultural area. This simple plan will work miracles, and in the end solve the surplus problem.

Why Modern Highways Are Essential to America

EXTENSION OF REMARKS
OF
HON. W. R. HULL, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. HULL. Mr. Speaker, we in Missouri are extremely proud of our State highway system. A large part of the credit for our excellent system goes to the voters of Missouri who have consistently supported sound road programs.

The will of the people for good roads, soundly financed, has been given a push toward realization by an outstanding professional group, the Missouri Highway Engineers Association.

This group met recently in Kansas City, Mo., and those in attendance had an opportunity to hear, among other speeches by outstanding men, a very fine talk by Missouri's distinguished Senator, the Honorable STUART SYMINGTON.

A former member of the Senate Committee on Public Works, Senator SYMINGTON, discussed the subject, Why Modern Highways Are Essential to America.

Under unanimous consent, I include his speech in the Appendix of the RECORD:

WHY MODERN HIGHWAYS ARE ESSENTIAL TO AMERICA

(Address by Senator SYMINGTON before the Highway Engineers Association annual dinner, Kansas City, Mo., February 27, 1958)

At a time when the minds of many are concentrated on outer space, it would seem wise—and it is certainly pleasant—to get down to earth and talk about our highways.

This is one subject on which we can point up our needs, outline our deficiencies, and still know that we are far superior to any other country on earth.

There are those who believe that world conditions make it necessary to curtail heavily our highway program, in order to increase our defense strength.

Nothing could be more erroneous—or, for that matter, more dangerous.

In this nuclear age, highways are an integral and vital part of our defense strength. We must be able to move rapidly. There can be no breakdown in transportation. Such a breakdown would immobilize America.

As illustration, into the city of New York alone, there moves each day over the bridges and through the tunnels over 20,000 tons of food.

Without one of the world's most modern highway systems leading into that city, this would be impossible.

Let's not consider as any luxury, therefore, our planned, modern highway system. It is a necessity, and the record so proves.

For some time I sat on the Senate Public Works Committee, that committee which handles the highway program in the Senate. Both in that committee and on the Senate floor, Senator ALBERT GORE, of Tennessee, was the leader in development of progressive highway legislation.

The ranking minority member and former chairman is Senator EDWARD MARTIN of Pennsylvania; and I never heard the matter of good highways come up that he did not emphasize their value to our national security.

Such a system is also vital to our prosperity. America can only continue to exist as we know it through emphasis on a strong, progressive, dynamic economy.

In the past 10 years our gross national product has increased from $257 billion to $434 billion. Our highways must be geared to support that gigantic increase in economic activity.

Money and effort efficiently devoted to highway construction can only be a sound investment in the future of the United States.

Today, with this country experiencing an economic decline, the Nation's highway program has an added significance.

It is quite possible that the tortoiselike speed exhibited in much highway construction throughout the country has in itself contributed to the current recession. Certainly, this added stimulus to employment, plus the increased demand for construction materials and equipment, would help turn the trend of our economy in the right direction.

But essentials such as highways should not be postponed, like medicine, for use only when economy is ill.

A construction program geared to the increased needs and increased population is sound, regardless of our general economic health.

It is better to have a stepped-up highway program now, with the resultant improvement in our economy, than to have a relief program inaugurated later in order to stay the rate of deterioration of our economy.

This same principle applies to school construction, flood-control projects, and other comparable programs.

The Federal Government as well as the State and local governments have a constructive tool ready at hand to accomplish two major objectives—eliminate our highway deficiencies, and reverse the recession trend.

The Federal-aid highway program is based on the principle of partnership between the Federal Government and the States. It is important that this does not involve a taking over by the Central Government of the prerogatives of the States.

The broad interests of the country as a whole, and of each taxpayer in particular, should be protected and encouraged by the Federal Government. In so doing, that Government has insisted on minimum construction standards; and has retained a veto power as to where Federal funds should be used.

These powers have been embodied in law and are all right if used in an atmosphere of agreement on objectives.

But the role of the States is largely unimpaired by this centralized authority. Federal highway aid should not and has not been translated into Federal domination.

On this point may I give deserved credit to the contributions—both in attitude and in ideas—of Missouri officials and Missouri citizens who have played a most important role in the passage of the 1956 act.

As you know, the proposal for an all-powerful Federal organization to administer our road programs was discarded; and is something we plan to do our best to see will not be revived.

Any actions which would tend to delay or stymie effective implementation of the present program can only encourage the pro-

ponents of greater centralized control to revive their unfortunate proposals.

Historically, Federal-State cooperation in building highways has been increasing at an irregular pace. Fortunately, however, it has been going in the right direction.

As we view the history of this progress, three major legislative actions stand out.

The Federal Highway Act of 1916 initiated the development of an integrated highway system, and established the requirement that every State must have a functioning highway department before it could be eligible for assistance under the act.

The Federal Aid Act of 1944 authorized a national system of interstate highways to connect metropolitan areas and industrial centers throughout the country.

The most recent legislative milestone in this field is the Federal Aid Highway Act of 1956. In this act our legislative program came of age—more nearly geared, in magnitude and policy, to the economic and defense needs of the country.

If this legislation is administered as Congress intended, we will have, in fact, a national highway system.

This 1956 act earmarked funds from specific sources. I cannot say I believe that this is necessarily the best way to finance a program of such importance and magnitude, as the amount of funds can fluctuate downward while the need for the highways increases.

Actually, a sound and adequate highway structure benefits all—not just the users—and hence necessary funds might appropriately come from general revenue accounts.

In spite of certain weaknesses, however, I consider the 1956 Highway Act an outstanding development in highway legislation.

Now that the intent of the American people, reflected through their Congress, has been clearly expressed in this law, it would seem wise to go about getting the job done as effectively and promptly as possible.

At this point, let me draw a brief parallel with what happened last year in the military defense program.

National intelligence information substantiated beyond reasonable doubt that we were rapidly losing both our qualitative and quantitative superiority to the Soviets in weapons systems. The need to act to reverse our relative decline was clear. Yet, our military manpower was cut back, funds for research and development were withheld, production schedules of planes and submarines were decreased, and ballistic missile programs were curtailed.

Turning to our new highway program, we see some of the same forces at work. Efforts are being made to stretch out the program. Actions are proposed for diverting money from the trust fund to pay expenses of the Labor Department, to pay tax collectors of the Treasury Department, to finance costs for national forest roads, and to withdraw revenues obtained from the aviation gasoline tax.

These diversions are estimated to amount to as much as $68 million per year.

Here, again, we have evidence of the policy of placing fiscal objectives ahead of this country's welfare.

In the face of increasing costs and increasing requirements, the need is to increase the highway trust fund—not to raid it.

There are many features of this highway program about which you know much more than I.

As example, there is the question of the State allocation formula, currently being reviewed because the Congress soon has to take action regarding it.

Hearings are being held, and I understand the Comptroller General is being asked to analyze the data.

Without attempting to suggest the proper formula before we have all the facts and analyses, I do believe that it is necessary to have uniform criteria for defining the needs of the respective States, regardless of what formula is used.

And so, in summary, it would seem that a sound approach to carrying out the highway program can be stated simply: Determine the needs for highways for all purposes; provide, on a Federal-State cooperative basis, as much financing as is required to meet those needs fully; and then put the program into effect as quickly as possible, without adjustments for nonhighway objectives.

Forthright Report on Security

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks I am submitting for inclusion in the RECORD an article written by George Todt, which appeared recently in the Valley Times, California, commenting on the Committee on Government Operations report on United States military aid and supply programs in Western Europe.

The article follows:

FORTHRIGHT REPORT ON SECURITY

(By George Todt)

"The sickening pang of hope deferr'd." Scott's Lady of the Lake.

In a hard-hitting but completely down-to-earth, unanimous bipartisan report, the House Military Operations Subcommittee said pretty much in effect what this column has repeatedly warned its readers of over the last 3 years: "Military aid programs are developed and funded with little, if any, regard for the net increase in defense posture which could be obtained if the resources applied to foreign programs were applied to United States military programs."

Which is a polite way of saying our allies have been dragging their feet in the so-called mutual security program. The report minced no words about it and called a spade a spade in this instance. Two of the signers were Los Angeles' Congressmen GLENARD P. LIPSCOMB, Republican, and CHET HOLIFIELD, Democrat. Democrats and Republicans all banded together on this one.

Frankly, the Military Operations Subcommittee seems to feel that we have been milked—but good. Here is a part of its statement which touches on this vital area:

"While the United States embarks on a program of speedup in the development of missiles and to increase the strength of its Armed Forces, no similar approach can be expected of the Western European countries.

"Under present methods of operation, we do not know what we are trying to accomplish through military aid.

"Congressional appropriations are little better than blank checks.

"It is necessary to dispel the illusion that our dollars have bought more security than is the case.

"Charges of waste and mismanagement in our military aid program have been viewed by many as an attack on the basic objectives of the program. This shield will no longer serve. A hardheaded reexamination is long overdue because the wastage is too great to be ignored."

But how do the American people get the facts for the great debate suggested by the thinking of the Military Operations Subcommittee? At least some partial answer was pointed up in regards to the difficulty of our people pursuing such a line of intelligent inquiry for themselves when the report noted that "the data needed for intelligent public debate on military assistance are largely contained in classified documents. For the most part, the American people are asked to take this program on faith rather than on the basis of a full disclosure of relevant information."

This is little short of a damning indictment of the foreign aid program we have pursued since the end of the Second World War. Especially when the dynamite-laden report touches upon—perhaps hints would be a better word for it—what could easily be the real fly in the ointment all along. Consider this: The committee suggested a concentration on forms of aid other than military programs which make "underdeveloped nations a vast dumping ground for secondhand war materiel which can be considered obsolete in any future war which this Nation will quite likely be forced to fight nearly alone. Any modern merchants of death in on this operation? Hmm?

The Subcommittee minced no words about our national security as based on foreign military aid outlays in the past: It called it a dangerous illusion of security. The solons said that the whole concept of NATO (North Atlantic Treaty Organization) military power is dangerously outmoded and requires complete revision from the ground floor up. Its weapons, tactics and strategy are not fundamentally sound—and we are foolish to rely upon it for our own security so much as we may have done in the past.

What the Military Subcommittee seems to be saying to us is something like this: "Let's face it. These NATO partners of ours just don't have it any more. They are incapable of playing their full role with us as comrades-in-arms. Or maybe they just don't want to any longer. Perhaps they hope to sit the next war out on the sidelines. Isn't it time for a public debate on what our own American military policy ought to be in the future? What's the score?"

No, I didn't write this report, myself. But it would appear from my past writings in the Valley Times that the forthright Committee members and I see this matter in much the same light. What about that public debate?

Courage on Summit Parley Issue—United States Stand for Productive Preliminaries Seen Brushing Aside Soviet Pretense

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks, I wish to include the text of an article from the March 7 issue of the Washington Star, by David Lawrence, and entitled "Courage on Summit Parley Issue." The article gives well-deserved praise to President Eisenhower and Secretary of State Dulles for insisting on productive and essential preliminary talks before any so-called summit conference takes place. This stand will clearly show whether the Russians desire such a conference for propaganda purposes or whether they

actually want some constructive results to come from such a meeting. The article follows:

COURAGE ON SUMMIT PARLEY ISSUE—UNITED STATES STAND FOR PRODUCTIVE PRELIMINARIES SEEN BRUSHING ASIDE SOVIET PRETENSE

(By David Lawrence)

It takes genuine courage to issue a note such as the Government of the United States has just sent to the Soviet Union in an attempt to brush aside the pretense of the Communists and get to the root of their demand for a summit conference.

First impressions might be that straight talk could prevent the holding of a summit conference. Actually, it may work out the other way. For, as the United States earnestly attempts to clear the air, the way is wide open to an agreement at any moment if by chance the Soviet Union sincerely desires to make one.

Unfortunately, the biggest single obstacle to the holding of a summit conference in 1958 is the record of what happened when the last summit conference was held in Geneva in 1955. It was indeed a showy affair, and when the United States now says it isn't interested in repeating that kind of parley, out of which again would come meaningless communiques, there is no doubt that the true difficulties of a spectacular session are being realistically underlined.

Originally a summit conference meant that the heads of governments would get together for a quiet talk by themselves. But the Geneva session showed that, with a couple thousand reporters and photographers at the doors and lots of secretaries and attachés inside, the meeting might just as well have been held in Madison Square Garden. International agreements are never reached that way. It was a propaganda affair from start to finish.

Even as the Soviets were professing high purposes, they were secretly making an arms deal with Nasser and stirring up tension in the Middle East, which has not since been relieved.

The United States says it wants a conference that would begin seriously to resolve important issues and inaugurate significant steps to limit armaments, and it doesn't want just to get together to have a lot of talk and press notices.

It isn't clear as yet what the Soviet strategy really is. The persistence of the Moscow regime in pushing for a summit conference is not explained by anything that has happened in recent weeks. For there's no evidence from the Soviets of any intention to make any concessions anywhere in the world.

The only explanation that is regarded here as plausible is that the Communist rulers are trying to placate their own public opinion. It is important for Khrushchev to gain prestige with his own people, and there would seem to be no better way from his standpoint than to begin hobnobbing with the President of the United States and the Prime Minister of Great Britain. This seeming recognition of the respectability of the Communist cause in the world is very important internally in the Soviet Union to the men in the Kremlin.

But the United States Government, which is pretty well informed on what's going on inside Russia, has not been stampeded by the propaganda barrage and has not hesitated to insist that, if there is going to be a "summit" conference, it must take up every important issue that is creating tension in the world today. It is significant that the United States, in listing the issues, includes the "enforced partition of Germany" and the "external interference in countries of Eastern Europe" as well as effective disarmament measures.

The mere fact that the United States reiterates its concern over the tragic continuance of a divided Germany and once more emphasizes its dismay at the interference by the Soviet government in the affairs of Hungary, for instance, indicates that the western allies have not been bluffed by the rising tide of artificial opinion generated by the Communists in many western countries in an effort to make it appear that the West is rigid and inflexible and unwilling to make peace.

Every day there are evidences that the Communists have stirred up mass meetings and phony "peace movements" in almost every Western country, using not only their stooges but many well-meaning persons who are gullible enough to fall for these tactics. The impression sought to be created is that the western democracies are "warmongers," eager to precipitate a conflict and desirous only of maintaining large armaments for materialistic reasons. The truth, of course, is that the western democracies have to be prodded into bigger and bigger expenditures on armament and that, at the slightest sign of an easing of tension, there is a tendency to relax the spending.

It is a matter of great encouragement to freemen everywhere that the President of the United States and the Secretary of State not only see through the Soviet maneuvers but are insisting that, if there is going to be another "summit" meeting, something definite will have to be assured in advance—something that will really give tangible evidence of a desire to relieve tension in the world. The latest note is an illuminating example of open diplomacy with all the moral strength that comes from earnestness and sincerity.

Self-Help Economic Plan

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. WESTLAND. Mr. Speaker, I am always proud to present to the Members of the Congress the achievements accomplished by the people of the Second District of Washington. Like most people, they have problems. But, unlike some people of our time, these folks try to do something themselves to solve their problems before turning to others outside their own communities.

The concept of the dairy self-help plan originated in my district, because these people believe they should try to solve their own problems. And now the residents of one community have started a self-help economic project to solve an unemployment situation.

This community, Friday Harbor on San Juan Island, normally has 1,000 population. A couple of years ago, however, this dropped to less than 800 because of a poor farming season, a poor run of salmon, a shortage of tourists, and the closing of the island's cement plant.

What the townspeople did about it is told by C. L. Anderson in A Town and Its Do-It-Yourself Economic Project, an article which appeared in the February 16, 1958, issue of the Seattle Times.

Everyone from Mayor Al Lindberg on down attended town meetings and meetings of the economic council in hopes of finding an answer to the unemployment problem. Finally, John K. O'Neil, a television service operator, invented an emergency attachment for radio-telephones which enables a fishing boat to transmit distress signals. It looked as if a possible new industry would be born in Friday Harbor.

Few, if any, of the unemployed knew anything about electronics, so Frank Jones of Eastsound started classes last November. The 75 pupils, such as Cleve Vandersluys, learned quickly.

On January 8, 1958, John Wade, Sam Burton, and Vic Reynolds, production-line men, assembled the first attachment while David Ruthroff, secretary-treasurer of the new company, and Mrs. Patricia Fairweather, the company's first office employee, watched.

By early April, employment is expected to rise to 20. However, this isn't all the town of Friday Harbor expects to do. The townspeople are still looking for new industries. This is in the tradition of the Second District, which believes in self-help.

The article follows:

A TOWN AND ITS DO-IT-YOURSELF ECONOMIC PROJECT

(By C. L. Anderson)

The citizens of Friday Harbor on San Juan Island knew they must do something.

It was late 1956. Farming had been poor that year and the salmon run didn't amount to much. A fish cannery had turned to packing peas, but without profit. The tourist trade was below normal.

Then came a real blow—closing of the Roche Harbor Lime & Cement Co. at the north end of the island. It had employed about 50 persons.

Unemployment became a serious problem. The population, about 1,000 in 1955, was below 800.

The town's businessmen began discussing ideas for putting the economy on a sounder basis and making it less dependent on summer activity. More year-round industry was needed.

An economic council was formed. But after many meetings of the council and townspeople, it was apparent that a tangible project, however small, was needed to spur the program.

John K. O'Neil, 47, operator of a television service at Friday Harbor, came up with one. He had invented what he called a Channelgard, a fishing-boat radio-telephone attachment for distress signals.

Production of the Channelgard looked like a possible new industry for Friday Harbor. But the unemployed persons in the area knew little about electronics. They had been fishermen, loggers, and cannery and quarry workers.

Through the State board of vocational education's help, an intensified training program was set up. Frank Jones, of Eastsound, started classes on a 6-hour-a-week schedule last November and 75 students enrolled. They learned quickly.

Production of Channelgards began December 16, with three men on the production line. Another student was hired as office help. The first Channelgard came of the production line January 8.

The classes are continuing and more students will be hired.

"We expect to employ 20 persons when we've reached our present full-production goal," O'Neil said, "That probably will be in early April. We should be producing 200 a week by then."

Sesco, Inc., the corporation formed to produce Channelgards, already is looking for new products to turn out and sell. Other ideas for increasing employment in Friday Harbor are being developed.

"We're not going to rest until everyone in Friday Harbor is gainfully employed and we're importing persons for jobs," O'Neil said.

Appendix

A Test for Babysitters From Medford, Oreg.

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. PORTER. Mr. Speaker, under unanimous consent I include the following article, Can Your Babysitter Pass This Test? by Leslie Cameron which appeared in the American Weekly for March 2, 1958. As the father of four children I am among the millions who qualify as a judge of babysitters. This is a good test. Medford High School deserves to be commended for the work they have done in this area, an area that is important for us parents but also has everything to do with the training of girls—and boys too—for the day when they will have children of their own.

CAN YOUR BABYSITTER PASS THIS TEST?

(By Leslie Cameron)

The city of Medford, Oreg., with a population of about 25,000 people, probably can honestly claim that it has the most competent and reliable babysitters in the country.

They are all teen-agers and graduates of a high-school babysitting course that has been taught since 1955 by a faculty made up of a police captain, the director of safety and first aid, the dean of girls, the school nurse and a member of the PTA.

Before a teener can become a certified sitter, available only through an employment office in the high school, he or she must be able to cook and serve simple meals, prepare a variety of baby formulas, bathe, dress and diaper a baby, apply first aid for cuts and minor injuries, and give artificial respiration.

And before the would-be sitter gets a diploma, he or she must pass a written examination and 2 oral tests with a mark of at least 85 percent.

How do you think you, or the sitter you hired last week, would make out on the following questions taken from these tests? Score five points for each correct answer. If you score less than 40 you'd have a hard time getting a babysitting job in Medford, Oreg.

ARE THESE STATEMENTS TRUE OR FALSE?

1. If you hear strange noises, or think someone is prowling around the house, don't call the police until you're sure you're right.
2. It's all right to let a stranger into the house if he tells you that he is a friend of the family.
3. If you get lonely, don't call some of your friends on the phone and hold long conversations.
4. Leave the latch off the door so your employers can get in if they arrive home late and you should fall asleep.
5. In an emergency it is all right to leave the child alone for a few minutes.
6. In case of fire, first call the parents and then the fire department.
7. If the phone rings while you are bathing the baby, wrap the child in a blanket and take it along with you while you answer the call.
8. If you have given a child a dose of medicine and he doesn't retain it, give it another dose.
9. It is not necessary to check on a sleeping child oftener than once an hour.
10. Give a restless child any toy he wants if it will help him get to sleep.

ANSWERS

1. False. Always call the police if you are in doubt about strange noises.
2. False. Never allow anybody but members of the family into the house.
3. True. Don't tie up the phone. Your employers may want to reach you.
4. False. Always keep doors locked and shades drawn when you are alone.
5. False. In an emergency, always take the child with you if you leave the house.
6. False. Get the child, or children, out of the house, call the fire department, then the parents.
7. True. Never, under any circumstances, leave a baby alone in its bath.
8. False. It might be dangerous to repeat the dose.
9. False. The sitter should check up on the child at least every half hour.
10. False. Never give a child sharp toys on which he could hurt himself, or toys small enough to be swallowed.

Parole Is Also Justice

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. CELLER. Mr. Speaker, the Honorable George J. Reed, Chairman, United States Board of Paroles, recently delivered the following address, Parole Is Also Justice, at the Third Annual Southern Conference on Corrections at Florida State University, Tallahassee, Fla.

Mr. Reed discusses the need for setting up uniform standards in dealing with the parole of prisoners incarcerated in our Federal correctional institutions. The Supreme Court has often pointed out that parole is not a matter of right but one of legislative grace. Under our laws, the whole matter of parole is left to the informed discretion of our Parole Board. This tremendous duty places upon our paroling authorities a great responsibility to develop a set of firm, uniform standards to assure equal justice to those who seek their consideration.

In the last session of Congress I sponsored a resolution which seeks a similar result in connection with the sentencing of prisoners, House Joint Resolution 424. It provides for a series of institutes or joint councils, under the auspices of the Judicial Conference of the United States, in order that judges and other Federal officials may meet to discuss their experiences and to study and formulate uniform standards for sentencing. I am happy to know that the Chairman of the United States Board of Paroles shares similar views with regard to parole problems. The interesting address which follows points up the need for parole officers to meet and discuss problems in this field so that they may develop uniform standards for use as guides in deciding parole problems.

The address follows:

PAROLE IS ALSO JUSTICE

(Address by George J. Reed, chairman, U. S. Board of Parole, before the Third Annual Southern Conference on Corrections, Florida State University, Tallahassee, Fla., Wednesday, February 19, 1958.)

It is a real pleasure to be with you on this the occasion of the Third Annual Southern Conference on Corrections. It is a good experience to get away from Washington and the regular office routine as well as outside the Parole Board hearing room to meet with professional correctional workers. We in this field need more time to sit down together, to compare experiences, discuss our problems and thereby better define our objectives and keep a fresh objective outlook toward our work.

A little over a year ago, while reviewing the American Law Institute's proposed model Penal Code, I discussed with the Honorable George Edwards, justice of the Michigan Supreme Court, the question of parole selection Justice Edwards pointed out that while parole, from a legal point of view, is a part of the original sentence and is therefore a matter of grace and discretion on the part of the parole board, he was sometimes confused and at the same time concerned at the lack of a true criterion for parole board decisions.

Since that evening, over a year ago, I have been attempting to reassess my own philosophy of parole selection and study present practices in the field in an effort to formulate an adequate answer to Justice Edwards' question. After searching the decisions of the Federal courts I am reassured as to the purely legal authority of a parole board either to grant or deny parole and I refer to a review of the case of *Hyatt* v. *Compagna*, where the Fifth Circuit United States Court of Appeals held in 1949, and was twice affirmed by the United States Supreme Court, that parole is a matter of legislative grace not of right. This far-reaching case further pointed out that under the Federal statutes, "the whole matter of paroles is left to the informed discretion of parole boards and court action is not made a part of it." Special attention is called to the words "informed discretion." While parole is discretionary on the part of paroling authorities the law and the courts assume such discretion to be founded on an informed well-balanced judgment. It seems to me that this puts a very great responsibility on paroling authorities to develop a firm set of standards that will assure equal considera-

tion for all cases. High above the United States Supreme Court Building in Washington, D. C., is inscribed these words, "equal justice under law." As paroling authorities, we need to reexamine our standards, our philosophy, and our procedures to make certain that parole is also equal justice.

If parole boards are to ever develop universally accepted standards for granting or denying parole we must reduce to writing answers to some of the following questions:

Should the parole board retry the case at the time of the parole-board hearing? Should the parole board undertake to equalize sentences? Should health, hardship factors or family need be given great weight in reaching a decision? How far should the board go in releasing obviously doubtful cases in order to give the prisoner the benefits of close supervision on parole? To what extent should the views of the committing court, the prosecuting agency and the community be taken into consideration?

Let us, therefore, for a little while this evening take a look at some of the progress that has been made in this field during the past few years as well as examining our continuing problems.

In an attempt to shed light on the dilemma of assuring ourselves that we practice justice in selecting prisoners for parole, let us first review the use made of parole since its early beginnings. Next let us examine the methods by which present day parole boards select prisoners for release. Lastly, perhaps we may extend our thoughts into the future with the hope that we will be able to draw some conclusions as to the possible avenues we might travel in making a just and defensible decision regarding a man's parole.

Very briefly let us turn to Europe where parole had its beginnings in the mid-1800's. Sir Walter Crofton and Sir Joshua Jebb are generally credited with introducing what was later called the Irish system of permitting a prisoner (by good behavior) to progressively work his way toward lighter forms of discipline and finally to release into the community under supervision. When prisoners were thus released they were given a ticket of leave which was revocable for irregularity of conduct anytime prior to the expiration of the original sentence.

The Irish system later was adopted with modifications in the United States with the establishment of the Elmira Reformatory in New York in 1876. Prisoners could gain parole from Elmira (as under the Irish system) by good behavior in the institution which was measured by a marking system. We find little, if anything, in the literature which indicates that there were any criteria for selecting whom to parole except the criterion of good behavior while incarcerated.

The English used parole extensively under the Borstal system with young offenders. Under this plan there was a board of persons charged with the determination of the time for release under parole supervision.

In America the rise of the reformatory movement and the indeterminate sentence led naturally to the increased use of parole. Rapidly boards were created to administer this program. With the advent of boards of parole there gradually came an awareness that their decisions should be based on other factors than the inmate's behavior while incarcerated.

Let us look briefly now at the methods by which present day boards of parole make their decisions. There are four major areas in which the members gain information regarding the prisoner. The first of these is in the realm of case analysis; by that I mean a study of the written material which has been placed together in a jacket or folder for each prisoner. This folder may container information received not only from institutional authorities, but also from relatives, community members, and the prisoner himself. As you are well aware this material may be very sketchy in some jurisdictions and very professional and complete in other jurisdictions. The second method of gaining information comes from a personal hearing which takes the form of a face-to-face interview between the prisoner and the hearing member. Incidentally, the ability of the hearing member to put the inmate at ease during such a hearing is a valuable asset. The personal hearing before a member of the board of parole should allow sufficient time for the inmate to tell his story. He has been building up for this; he has been planning for it; he has been looking forward to this day. It is important to him to have the opportunity to come before the board and tell his story in warm and friendly climate. I believe the board member should assist the applicant in making the best presentation possible. I know that many times I have had an institutional parole officer tell me that a man performs beautifully until he comes in before a hearing member, and then he simply freezes and sits there at a loss for words, unless the member comes to his rescue and asks some leading questions.

In addition to the study of the case material and the personal hearing parole boards quite often permit community members and relatives to appear before them to speak on behalf of a prisoner. This often adds to the store of knowledge concerning the community temper, the family interest and abilities, and the opportunity for employment or guidance. The Federal Board of Parole spends 2 half-days per week for this purpose. There is also in use in a scattering of jurisdictions the resource of parole prediction tables. I know of no State, however, which uses these tables which does not also use 1 or all 3 of the aforementioned methods of obtaining knowledge about the person under consideration. These so-called prediction tables are actually computations of the mathematical probabilities of success on parole according to certain characteristics possessed by the inmate. These tables are based on the experience of previously released inmates with similar characteristics.

I would now like to present certain elements which combine to influence a parole board member's decision, but first I feel it might be helpful for us to understand precisely what the member is deciding. At first contemplation we conclude that he is deciding which prisoner is to be granted parole and which is to be denied that opportunity. We must realize further, however, that in many jurisdictions that is not the question at issue. Instead the question is, "At what time shall parole be granted?" This occurs in States where parole is mandatory for all prisoners under youth authority or indeterminate sentence laws. In the Federal system the parole board decides both whom to parole and when to parole for the bulk of its prisoners. In the case of those committed under the Federal Youth Corrections Act, however, where parole is mandatory, the sole determination is the date such parole is to become effective.

We have discussed the methods of obtaining facts about the prisoner. Certainly this information becomes the primary basis for the board member's vote. We can never overlook, however, the fact that something of a member's own experience goes into his vote. His decision is based not solely upon the information known about the prisoner, but also upon his personal reaction to that information. We must ask ourselves what personal experience has the parole board member had with criminal offenders or with other members of the human race who have had difficulty adjusting to society's demands. We must further ask what academic background has he had or what study has he made in the field of corrections.

As a member reads the summaries contained in a prisoner's case file, what are the various factors which he examines before placing his vote on the official order blank? The most obvious of these is the offense which led to the conviction. Occasionally a prejudgment of the prisoner is entered at this point, and if this is a strong and all-prevailing prejudgment there is little reason to consider any other factor. Sometimes this prejudgment has already taken place by the public at large when it permits the passage of repressive legislation barring certain types of offenders from parole. Sometimes this prejudgment is made by the board member who either consciously or subconsciously forms a harsh or lenient attitude toward certain offenses. What is the member's personal reaction, for instance, toward narcotic offenders, sex offenders, draft dodgers, income-tax evaders, embezzlers, and so forth?

Closely allied to the present offense is the offender's prior criminal record. There is not time here today to discuss the concept "Once a criminal, always a criminal," but we must realize that there are groups who accept such a theory. The judicious member will study certain facts about that criminal record, such as the length of time since the last serious offense, and the pattern of the offenses. He will also consider any present influences on the prisoner which were not existent at the time the criminal record was being amassed.

The family situation should be taken into account. What is the prisoner's marital status? Who would be his associates in the household and what is the social and financial status of those associates? Have there been significant changes since imprisonment began?

It has been said that, "A man's vocation is the watershed down through which the rest of his life flows." By that is meant the employment engaged in by a person vitally affects all his other day-to-day behavior. Many a parole plan has gone for naught due to the lack of a realistic employment opportunity. And so we must examine a man's previous experience in the industrial world. How long has he spent on previous jobs and why did he leave them? What skills did he learn prior to and during institutionalization? Further, was his employment a factor in his offense? For instance, did he become an embezzler while working for a loan company, or did he sell narcotics while employed in a hospital or clinic? At times it is possible for the board, through its agents, to practice social manipulation in making possible successful parole.

Other factors to be considered include the prisoner's health as it affects his opportunity for employment. Incidentally, it might be interesting to learn how often poor health or disability prevents an ex-convict from committing further crimes.

The parole board should inquire into the availability of professional psychiatric and social-work treatment within the institution and in the community following release. It should also inquire as to the use the individual has already made or will make of this help. Equally important is an evaluation of the prisoner's basic attitude toward authority gained while in the controlled environment. Is it strong enough to carry over in surroundings where there is considerably less control? What difficulties has he experienced with parents, teachers, employers, police, and military authorities? What has been his institutional adjustment as reported by custodial authorities? You will note here that I am referring to this factor as only one of the many previously described. Under the artificial system of marks or demerits in vogue 50 years ago, this one factor of institutional conduct normally was the only criterion for selecting whom to parole. I contend at this time that it remains an important factor, but it is only one of many factors which should be considered.

Another major area in which a parole board should inquire is the area of community reactions to the prisoner and his crime.

In both the first and last analysis, the parole board's first responsibility is to the society which created it. It must, above all, represent the total community conscience, and not any one vocal segment who would force their thinking upon the board. It must never become so interested in rehabilitating a given individual that it fails to protect society against persons who are apt to again injure it. It is conceded that the parole board has been created by the general population and is charged with the responsibility of using its own professional knowledge in making judicious and sometimes unpopular decisions. It thus must, at all times, accept the responsibility of independent action. Parole, as an American institution, however, will not long last if it violates the conscience of an enlightened society. The neighborhood feeling into which the parolee would return, moreover, has an influence on whether or not he would be accepted or rejected, and thus is a factor to be reckoned with in determining who will succeed on parole and who will fail.

Modern-day social scientists in the field of corrections have become concerned with the extremely large number of variables which go into a parole decision. In an attempt to streamline parole selection procedures, as well as to make the decisions more accurate, they have devised tables of probable success on parole. These tables are based on studies of characteristics found in parolees previously released. Notable among these social scientists is Dr. Lloyd Ohlin, who did his pioneering in the State of Illinois. Ohlin has studied the careers of thousands of parolees and has drawn some conclusions regarding the relative significance of the informative items found in a case history. He has found that among the more significant factors are the type of offense, home status, social type, work record, personality type of the offender, and others. Using the experience of the past, he has assigned numerical values to the factors in such a manner that the information in a case history may be converted to numbers, with the total score forming the basis for a prediction of probable success or failure on parole.

I would like to take a minute to discuss the use to be made of followup research, especially insofar as prediction tables are concerned. In Illinois the research on past parolees has evolved into a mathematical formula for predicting the probable success of future groups of parolees. It is most significant, however, that such tables do not purport to predict the success or failure of any one given individual. It is valuable only in predicting the adjustment of a group. Ohlin himself expresses this when he says, "There is a close parallel between the part played by experience tables in the parole selection process and the use of life tables in establishing insurance premiums." In other words, risks for longevity of life or success on parole can be classified into groups on the basis of certain physical characteristics, but it is still impossible to predict the length of life or degree of parole risk for any one individual within that group. The makers of prediction tables are the first to recommend that scores obtained from the tables should serve only as guidelines. They realize that computation of a mathematical score is only one possible step in the selection process.

We of the United States Board of Parole are now in the midst of a followup study of persons committed under the Federal Youth Corrections Act. This study is being conducted in three parts. Part I is complete and consists of a description of the offender himself. We have gained valuable information regarding the personal characteristics of the youths with whom we are working. Part II is an examination of the institutional influences which are being brought to bear on these persons. Part III will be a survey of the elements to which they are exposed during the parole supervision period. It is anticipated that several of these categories of information thus gained will be correlated with the eventual success or failure while on parole. We trust that such a followup study will provide us with helpful information in our determination of the best time for parole of the individuals to be committed under this act in future years. In addition to this study, we also plan thorough research into the probable causes of failure of all Federal parolees who violate the conditions of their release.

We, of the United States Board of Parole, have discussed at various times the use of prediction tables in our work. Each discussion, however, ends with the conclusion that there has not yet been devised a system which would replace an intensive study of each case file. In the Attorney General's Survey of Release Procedures of 1939 it was shown that, and I quote, "It seems that the Federal Parole Board is able, on the basis of a commonsense approach to the problem of parole selection, to recognize many of these general traits which are associated with good risks and poor risks for parole. Since this is the most that a parole-granting agency could hope to do by using a quantitive prediction device, it does not seem that the introduction of such a device into the Federal parole practice would bring about any substantial improvement * * *." This was in 1939. What is the situation today? Turning to a copy of the 1957 annual report of the Board, I observe a direct relationship between the paroling practices of the Board toward certain types of offenses and the violation rates of the persons who committed those offenses. To be specific, our statistical research shows that in the case of automobile thieves and forgers we parole less often and at a later period in the sentence. Auto thieves received parole only 24 percent of the time and forgers 21 percent, compared to 34 percent for all types of offenders. They also served respectively 47 percent and 50 percent of their sentences prior to parole, compared to only 44 percent for all offenders. Correlated with this is the fact that auto thieves and forgers made up the highest proportion of violators. Thirty-one percent of the auto thieves and 23 percent of the forgers violated their paroles, compared to only 20 percent for all Federal parolees. It thus appears that we are being less lenient toward the poor risks and more lenient toward the good risks. This is being accomplished without the aid of any prediction device. We however do make available to our Board members the results of our quarterly and annual statistical material. I believe this is possible because my colleagues on our Board are able, out of their own experiences, to make intelligent evaluations and to place their own weights on the elements surrounding the individual according to the value it plays for that particular person. This is a task which a prediction table can never do.

I hasten to assure you that even though we, at the present time at least, do not desire to use prediction tables, we are hungry for information concerning those whom we have paroled. We try to absorb all known facts about our parolees and incorporate them into our thinking before making decisions. This is done, however, after a thorough individualized case study rather than on an artificial paper approach. There are countless uses for followup research other than for creation of a prediction table. Research can help to eradicate unscientific prejudice on the part of the public as well as the voting board member. Preconceptions or prejudgments often fade in the light of scientific analysis. Further, in those jurisdictions where members who have not had extensive experience in the field of human relations are appointed to boards of parole, the supplying of information concerning parolees' behavior can help remedy that lack of knowledge. Even the most experienced member, however, cannot accurately predict all the factors involved in success or failure of those under parole consideration because times and conditions change, and the most capable of members need to receive a constant flow of organized and meaningful data on human behavior.

Using the results of a followup study completed 10 or 15 years ago is false economy. The types of offenders have changed—the industrial world has changed—social agencies have changed—indeed every facet of society has undergone extensive modification which would make any 10- or 15-year-old study in the field of social science obsolete.

Likewise, to use the results of a followup study of parolees in another geographical area is also false economy. The elements involved in the correct of prisoners committed in California, New York, or Virginia are vastly different from those committed in Alabama, Florida, or any other State. Conditions in a county or State government vary tremendously from conditions in a State or Federal Government. The obvious need then is for continuing research within one's own jurisdiction.

A well-balanced judgment on the part of a parole board suggests that such decisions should be the result of a board action and not the thinking of any one individual. If the parole board is to be completely objective it must be free of any political or outside administrative pressure. Many boards of parole are appointed by the chief executive of the State for stated terms, thus providing sufficient longevity and security to assure independence of judgment in making decisions. It is also important that a parole board have a cross-fertilization of ideas and philosophy. To effect this desired result board members should be selected from various disciplines and training so that the broadest possible understanding of human behavior will be weighed in making board decisions. At the present time the Federal Board of Parole is composed of 8 persons serving in a full time capacity with a 6-year appointment. Members of the Board are appointed by the President with the advice and consent of the Senate. Members on the present Board include officials from the probation, parole, and institutional services, as well as other areas of Government where actual knowledge has been gained in an understanding of not only criminal behavior but of people generally. The President, in selecting the present Board, has been careful to select people from various professional backgrounds directly related to parole, which include the legal profession, sociology, social work, education, psychology and Government.

To summarize, let us review what has been said and see if we have gained any insight into both the need for, and the methods of obtaining justice in our task of selecting whom to parole and deciding the most propitious time for parole. In order to assure that each prisoner is receiving equal opportunity for parole under a just selection procedure we must have some uniformity of criteria. In order to arrive at agreement as to what criteria shall be used and the relative importance of each, I believe we must take some necessary first steps. The following four points, I feel, represent not only a summary of my remarks but also point out the steps which must be preliminary to formulation of a set of uniform criteria for parole selection.

1. Parole consideration consists of the gathering of all available information about the prisoner, studying it against the backdrop of one's own life experience, which include the assimilation of knowledge gained through research surrounding parole.

2. In order to reach a valid judgment as to the appropriateness of parole it is necessary to dispel any cloud of prejudgment

which may exist and this might best be accomplished by appointing board members having broad experience and training. Further, some form of followup research would aid members in maintaining objectivity.

3. Experience has shown that certain characteristics of the prisoner or his environment are more or less significant in the success or failure of parolees when studied as a group, but that it is necessary to gage the significance of any one element to the particular individual in question. For this reason where prediction tables are used they must be supplemented by individual case study by qualified persons.

4 (and last). Parole decisions should be made by parole boards composed of members free to exercise independent judgment having a variety of training and experience backgrounds so that the broadest possible understanding will be represented in the composite thinking and decisions of the board.

In conclusion, it would appear that in the past 30 years much progress has been made in better defining our criteria for parole selection, but much remains yet to be done in establishing well-defined standards. The courts have ruled that paroling authorities have legal authority to act within their informed discretion. But we must, through research discussions and conferences, such as the one we are attending now, more clearly define our basic principles in this area, if parole is to ever realize its full potential as a part of the field of corrections.

Thank you.

Surplus Property for Science Education

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 10, 1958

Mr. McCORMACK. Mr. Speaker, on January 27, 1958, I inserted in the RECORD at page A713 some data indicating that interested executive agencies were cooperating in an effort to break a number of bottlenecks to increase the amount of surplus property made available for educational, health, and civil defense purposes.

I have been pleased to note that the allocations of property for the month of January 1958, have increased to an all-time high of $29,078,312. The latest report from the Department of Health, Education, and Welfare indicates the following allocation of property by States:

Total property allocated to the States, by regions and States

Region I:	
Connecticut	$577,335
Maine	101,227
Massachusetts	322,180
New Hampshire	57,229
Rhode Island	92,617
Vermont	69,764
Total	1,220,352
Region II:	
Delaware	89,970
New Jersey	592,029
New York	2,161,158
Pennsylvania	917,960
Total	3,761,117

Total property allocated to the States, by regions and States—Continued

Region III:	
District of Columbia	$104,184
Kentucky	325,687
Maryland	521,228
North Carolina	1,204,070
Virginia	416,049
West Virginia	443,900
Puerto Rico	107,773
Virgin Islands	----------
Total	3,122,891
Region IV:	
Alabama	473,766
Florida	497,289
Georgia	644,637
Mississippi	306,806
South Carolina	414,783
Tennessee	692,654
Total	3,029,934
Region V:	
Illinois	1,462,351
Indiana	597,375
Michigan	856,538
Ohio	757,299
Wisconsin	370,634
Total	4,044,197
Region VI:	
Iowa	165,696
Kansas	192,867
Minnesota	152,246
Missouri	2,423,710
Nebraska	1,540,855
North Dakota	36,845
South Dakota	193,568
Total	4,705,787
Region VII:	
Arkansas	160,659
Louisiana	248,638
New Mexico	225,645
Oklahoma	375,750
Texas	980,264
Total	1,990,956
Region VIII:	
Colorado	612,862
Idaho	226,810
Montana	99,060
Utah	180,364
Wyoming	66,107
Total	1,185,203
Region IX:	
Alaska	10,179
Arizona	331,588
California	4,049,135
Hawaii	111,611
Nevada	93,178
Oregon	862,436
Washington	559,748
Total	6,017,875
Grand total	29,078,312

A more recent development regarding donable property for science and research in educational institutions has been initiated. On February 5, 1958, as chairman of the Special Subcommittee on Donable Property, I addressed a letter to the Secretary of Health, Education, and Welfare, raising the question: First, whether or not it would be possible for that Department, in cooperation with interested educational agencies and institutions, to develop a list of priority items needed in the teaching of scientific courses and, second, if the Department of Defense which controls most of the available stocks of property and the General Services Administration could not cooperate in screening available stocks and expedite the declarations of excess property in order to meet the educational requirements.

The other members of the Subcommittee on Donable Property are: Hon. JOHN E. MOSS, JR., Hon. EDWIN H. MAY, JR.; ex officio, Hon. WILLIAM L. DAWSON, Hon. CLARE E. HOFFMAN.

I have been pleased to receive a favorable letter from the Secretary of Health, Education, and Welfare on the subject. Copies of my letter of February 5, 1958, and Secretary Folsom's reply of February 27, 1958, follow at this point:

HOUSE OF REPRESENTATIVES,
OFFICE OF THE MAJORITY LEADER,
Washington, D. C., February 5, 1958.

Hon. MARION B. FOLSOM,
Secretary of Health, Education, and Welfare, Washington, D. C.

DEAR MR. SECRETARY: Further reference is made to my letter of November 12, 1957 and to your reply of January 3, 1958, concerning suggestions for improvement of the donable surplus property program.

In amplification of the suggestions contained in my letter and with a special reference to educational requirements for scientific purposes I would appreciate your reaction to the following:

1. HEW, after consultation with interested educational agencies and institutions might submit a list of requirements to the Department of Defense. This list to set forth priorities and be in accordance with the classification and nomenclature of items as reflected in the new cataloging system.

2. The Department of Defense, the General Services Administration and the Department of Health, Education, and Welfare expedite the screening, declaration and allocation of these items to the extent feasible.

I believe that there may be many surplus items of current use and need for scientific training in our educational systems, and that priority screening and expeditious declaration of these items will be in the public benefit with little or no additional cost or inconvenience to the holding agencies. It also seems to me that the procedure herein outlined leaves the discretion with the holding agencies as to necessary inventory levels for current missions.

It will be appreciated if you will consult with other interested agencies and advise me as to your conclusions at your convenience.

I am sending a copy of this letter to Assistant Secretary of Defense (S. and L.), Perkins McGuire and the Administrator of the General Services Administration, Franklin G. Floete.

Sincerely yours,

JOHN W. McCORMACK.

THE SECRETARY OF HEALTH,
EDUCATION, AND WELFARE,
Washington, February 27, 1958.

Hon. JOHN W. McCORMACK,
House of Representatives, Washington, D. C.

DEAR MR. McCORMACK: This will acknowledge your letter of February 5, 1958, wherein you make certain amplifications to the suggestions contained in your earlier letter regarding surplus property, particularly in the areas of scientific utilization.

Your first suggestion that, after consultation with interested educational agencies and institutions, there might be submitted a list of requirements to the Department of Defense is generally a good suggestion. We have not as yet determined the best method for accomplishing this purpose.

Your second suggestion that the Department of Defense, the General Services Administration, and this Department expedite the screening, declaration, and allocation of these specialized items to the extent feasible is currently under consideration.

In order that you may be brought up to date on our activities of improving the procedures of allocation of materials appropriate for use by schools and colleges in the areas of mathematics and science, we can advise you that the Office of Field Administration is working with the Office of Education. A special committee has been established in the Office of Education, composed of specialists in secondary and higher education, for the purpose of working out with educational organizations and the Office of Field Administration more effective methods and procedures in this area.

In addition, we have been in contact with the National Science Foundation, which agency is planning some 200 to 400 workshop programs for science teachers during the summer. It is hoped that we will be able to contact each of these teacher workshops with a view to outlining how the schools which they represent can secure surplus scientific equipment. We have also been in touch with the Atomic Energy Commission with a view to learning if that agency can be of assistance in this area.

Our Division of Surplus Property Utilization staff is at work in the development of procedures to improve scientific equipment allocation.

The plans outlined above should result in the development of an action program. In carrying out such a program, we will solicit the cooperation of the National Association of State Agencies for Surplus Property, through their executive committee.

One other aspect of this development which we think would be helpful is the proposal to suggest to the States that they name a small advisory committee in each State, to be composed of a secondary, higher, and administrative education person, which could serve to assist the State operational unit in the development of special need lists and in expediting procedures generally.

Sincerely yours,

MARION B. FOLSOM,
Secretary.

Need for Additional Judges in Certain States

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. COAD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from E. E. Poston, clerk, United States district court, Des Moines, Iowa, March 4, 1958, concerning the need for additional judges in certain States, and his enclosed table listing the present population per judge in each of the 48 States, together with additions, in certain cases, as recommended by judicial conference:

DES MOINES, IOWA, *March 4, 1958.*

Hon. MERWIN COAD,
House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE COAD: Inasmuch as the perennial bill for additional judges will come before Congress, I thought it might be of some value to give you the enclosed information on the relative need for additional judges in certain States, and including Iowa. The population figures are based on Rand-McNally's 1956 estimate. I believe those figures will give you the picture of the judges per population in the several States and the impossible situation existing in Iowa at the present time.

If Congress gives us one additional judge it will still leave the population per judge 901,000. If two additional judges, the population per judge would still be 676,000, which would in my opinion be a normal load.

From my experience in this court one additional judge will still leave such a burden as to tax their strength and health. I would definitely recommend two additional judges with limitation that no additional judge be appointed after a vacancy by death or retirement.

The amendment could also provide that the fourth judge be subject to the chief judge of the circuit court for allocation to other districts where an emergency arises.

Sixteen States have retired judges within their borders, many of whom are taking assignments and relieving congested dockets.

If you need further information, please let me know and I will try to get it to you.

Sincerely yours,

E. E. POSTON,
Clerk, United States District Court.

State	Judges	As recommended by Judicial Conference	Population per judge
North Carolina	3	1	1,433,000
Maryland	2	1	1,400,000
Iowa	2	1	1,352,000
Wisconsin	3		1,244,000
Connecticut	2	2	1,135,000
Ohio	8	3	1,125,000
Indiana	4		1,095,000
Mississippi	2	1	1,051,000
Kansas	2		1,043,000

Yes—Baths for Camel Drivers

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include the following editorial taken from the New York Herald Tribune of March 6, 1958, entitled "Yes—Baths for Camel Drivers":

YES—BATHS FOR CAMEL DRIVERS

Egypt is not only one of the world's poorest lands, but one of its sickliest; the life expectancy of the average fellaheen is only 27 years. One of its greatest scourges is bilharziasis, caused by a hookworm which rides a microscopic snail and through it invades the kidneys, liver and spleen of Egyptians, causing bleeding. Its reproductive cells are discharged to infest other human hostages. Since Egyptians use the Nile for both bathing and sewage, they constantly reinfect themselves in an endless cycle.

One of the worthiest things ever done with United States foreign-aid funds was the construction of bathing facilities in Egypt and other Middle Eastern lands which would enable the people to break this chain of infection. But those who wish to discredit all foreign aid have singled out this program for particular denunciation before the House Foreign Affairs Committee, now considering renewed aid appropriations. They have found just the right name to make it sound like a disgraceful boondoggle: "Bathtubs for camel drivers."

Maybe, as Foreign Aid Chief James H. Smith, Jr., indicated, the truth about "bathtubs for camel drivers" will help demolish all the other distorted and malicious half-truths the enemies of foreign aid like to sling around. Let them try bathing in the Nile.

Boost for Coal

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial, Boost for Coal, which appeared in the February 24, 1958, issue of the Madisonville Messenger, of Madisonville, Ky.

The editorial is as follows:

BOOST FOR COAL

The electric utilities being soft coal's good customer, people in coal-producing areas will be greatly interested in a prediction that the electric utility market for bituminous will almost double in the next 12 years.

The forecast came from Dr. Myles E. Robinson, director of coal economics of the National Coal Association, and was made in Baltimore during an address to the Maryland Coal Association.

Dr. Robinson's reassuring words on the subject were:

"The electric utility market for bituminout coal for the next decade and even beyond should expand and not contract."

Tonnagewise, Dr. Robinson estimated that by 1970 electric utilities would be consuming in the neighborhood of 300 million tons of coal a year, an increase over present utility consumption of about 91 percent. In 1957, the industry furnished approximately 157,400,000 tons of bituminous to electric utilities.

In a survey of coal markets, both present and future, Dr. Robinson, after a careful review of both optimistic and pessimistic projections of the amount of nuclear power to be built by 1980, concluded that nuclear power poses no great threat to coal.

With regard to other coal markets, Dr. Robinson forecast that the cement industry,

stimulated by the Federal highway construction program, will consume more coal than ever in the next decade. He declared that coal sales to the steel industry—second only to the utilities as a coal consumer—will stabilize and increase as the economy recovers from the adjustment through which it is now passing.

Dr. Robinson summarized coal's 490 million ton market in 1957 as follows, in millions of tons: Electric utilities, 157.4; steel, 112.9; other industrials, 89.9; retail, 36.2; cement, 8.8; railroads, 8.4; Canada, 19.3; and exports (other), 57.

Teachers' Schooling

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. BOLAND. Mr. Speaker, there is a bill now before the Ways and Means Committee, H. R. 4662, which has great merit in this day when America is striving to improve the quality of teaching. This legislation sponsored by Congressmen KING and JENKINS would permit teachers to deduct from gross income up to $600 for any single year expenses incurred in the furtherance of education.

I am wholeheartedly in favor of this legislation and think that it would stimulate young teachers to advance themselves professionally by taking extra courses toward higher degrees. These teachers have to finance the cost of this higher education. Congress should look with favor upon legislation that would give them a tax credit for the money they spend on advancing themselves in the interest of better education. I certainly hope that the Ways and Means Committee will give this legislation serious consideration and report a favorable bill to the House.

Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the following editorial in today's edition of the Washington Post and Times Herald dealing with this subject:

TEACHERS' SCHOOLING

Teachers are under a good deal of pressure to go to night school or summer school in order to improve their teaching competence. One would suppose that the cost of such study would be reckoned a professional or business expense and be treated, consequently, as deductible from gross income in a teacher's income tax return. The Office of Internal Revenue says, however, that this cost is personal, not professional, and therefore not deductible, although the National Education Association and other teacher organizations have been trying for a good many years to make the tax officials see it the other way. We think the teachers have a pretty good point—a point that merits special sympathy at a time when the national interest calls for improved teaching.

As a part of its hearings on overall tax revision, the House Ways and Means Committee is now giving consideration to the King-Jenkins bill which would allow teachers in accredited schools to deduct from their Federal income tax returns expenses for tuition, books, travel, and living expenses while away from home (to the extent that they exceed normal living costs) up to a limit of $600 a year. There is substance to the Treasury Department's contention that this would constitute something of a loophole in the law. But at a time when oil companies are allowed extravagant depletion allowances and business concerns can take tremendous deductions for entertainment expenses, this loophole for teachers seems no more than equitable. Until the larger loopholes are closed, let's give the teachers this break.

Depression or Recession?

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks, I wish to include the text of an article from the Frankenmuth News of March 5. Frankenmuth, a small town in the northeastern part of Saginaw County, Mich., is peopled largely by thrifty, hard-working individuals of German background. As we hear all this talk of recession and depression, it is good to know of communities such as Frankenmuth where things are entirely normal.

The article follows:

DEPRESSION? RECESSION?—FRANKENMUTH NORMAL HERE

Recession?
Depression?

There's a difference. If the neighbor is laid off, it's a recession. If I am laid off, it's a depression.

Frankenmuth seems to be suffering from neither. From what the Frankenmuth News staff could learn in a telephone and personal contact survey this week, business in Frankenmuth is almost normal with some exceptions, of course. Business, in general, is down a little but most people contacted feel it is a general seasonal slump and that things will pick up again in a month or so.

Employmentwise Universal Engineering Co. has been working a 4-day shift for the last 5 weeks while Carling Brewing Co. workers are working full time, with more people working during the usually slack months of January and February than normally work during that period. Business at the Carling plant is up despite the general decline in the brewing industry. Employment at the brewery is down only 28 from its peak employment figure of 188 last August.

The 4-day workweek instead of 5 affects about 350 shop workers at Universal, about one-third of them being Frankenmuth area residents, the rest driving in from nearby communities. Some of the office personnel is on a 4-day shift also. A general drop in business accounts for the shorter workweek. Factory shutdowns throughout the country mean no orders from them, and the orders that do come in are for less pieces. The local plant is faring much better than tool-manufacturing plants in other areas. Workers in plants which, for instance are tooled only for the automotive industry, have been suffering the hardships of unemployment for some time.

Frankenmuth is fortunate in that its economy isn't based on the automotive industry. Diversified industry here has continued to keep the employment picture generally bright as it has in many other parts of the country where consumer income is high and retail sales continue to hold up.

Granted that some people are forced by reduced paychecks to shop for price rather than quality, retail sales aren't bad in Frankenmuth. Shopping seems to be going on in the usual normal manner. Customers are asking for the same cuts of meat they've always requested and there's no real quibbling or dickering over prices. Hardware and appliance sales seem to be down but that is partly a seasonable problem too. People seem to have the attitude of "let's wait another month and see what'll happen." Comments on wearing apparel and shoe sales range from almost normal to a 40-percent drop.

Car dealers report business is a little below normal but nothing to be alarmed about. New car sales seem to be holding up but used car sales and service is down, again attributed to a seasonal slump caused by income and property tax payments which are due now. Local service stations, like all businesses dependent on automotive trade, are feeling the pinch. There is less business and there are more charges, with the gasoline price war in neighboring communities making it that much rougher for local stations.

The hotels had one of their biggest Sundays of the year several weeks ago with one of them serving 1,000 guests compared with the 300 served on the same Sunday a year ago.

Deposits are on the increase at Frankenmuth State Bank and scheduled payments are being made satisfactorily. Only a very small percentage of collections are behind schedule.

There is some concern in Frankenmuth about the much talked about recession but there are few real complaints and business is nearly normal. There is some hesitancy about spending, common in times of threatened depression when people think twice before they buy, but the situation here is not abnormal.

The concensus of opinion is that keeping Frankenmuth dollars circulating in Frankenmuth will help Frankenmuth retain its "business as usual" status. The general outlook is optimistic. Spring's on the way. Days of sunshine are just around the corner.

Lahey Appraises Today's Newspapers

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. O'HARA of Illinois. Mr. Speaker, as everyone knows, Edwin A. Lahey, chief of the Chicago Daily News Washington bureau, is one of the great newsmen of our times. Virile, sharply intelligent, dynamic with the saving sense of humor he is never stuffy.

I first met him almost three decades ago when I was defense counsel in a murder trial that was attracting wide public interest. He had visited my office at night, and we were conversing about the trial, then nearing the close, when the telephone rang. The jury, supposed to be locked up, was reported missing. Somehow it had evaded the guards, and was on the loose.

Ed Lahey, then a cub reporter with the sense of humor characteristic of him, commented lightly on the seriousness of a jury in a sensational murder case being loose on the town and then set out to

find the jury and bring it home. His mission he performed. Early in the morning, after knocking at countless doors, he found the jurors eating and celebrating not without some noise in the restaurant of a tavern, got them safely back to their moorings. He had come to my office on the chance of picking up a stray angle or two, went back with a real story.

After 30 years' experience in every path and bypath of reporting, and the attendant observations, what is Lahey's appraisement of present-day journalism? This is a changing world, and the changes are affecting individuals and institutions as well as nations. Journalists, as well as others including politicians and statesmen, discuss these changes in the areas of their respective interest, but frequently the discussions are so stuffy that the point, if any, is lost. Not so with Ed Lahey.

Mr. Speaker, I am extending my remarks to include the following article by C. M. Zens in the current issue of the Catholic Standard, the archdiocesan newspaper of Washington, with the suggestion that nowhere else in comparable reading time can my colleagues gain a better picture of present-day journalism as viewed by a newsman of long experience and international distinction:

A blunt assessment of the current situation of America's daily newspapers was given to a group of aspiring journalists last week by Edwin A. Lahey.

Things are rough, on every side.

Rising mechanical costs and fierce competition for the advertisers' dollar have put financial considerations foremost in publishers' minds today, according to the chief of the Chicago Daily News Washington bureau. It is past time to argue whether a daily's first duty is to inform, or to instruct, or to crusade. The first purpose today of almost every newspaper is to remain solvent, to survive.

When the American newspaper publisher sees his industry dwindling through continual mergers and sales and failures, he underlines one demand to his editorial staff: give the public what it wants. Saleability, Mr. Lahey explained, gets top priority today in newshandling.

Looking at the readers, Mr. Lahey finds that they no longer give the daily newspaper the attention it has traditionally enjoyed. The ritual of easy chair, pipe, slippers and paper is on the way out, he believes. The appeal of TV particularly, along with radio, news magazines, and sports and entertainment, has had a strong effect on newspaper readers. When they pick up a paper now, they skim rather than read.

Examining the nature of the news today, Mr. Lahey points to further cause for dismay on the part of the practicing journalist. Recently Newsweek quoted him as concluding that superficiality was a principal characteristic of capable journalism today. One of Lahey's associates, reading this, complained to him that he must have been misquoted. Ed Lahey was not misquoted: He believes that world affairs move so fast and with such complexity that they can only be treated superficially. To claim thoroughness and depth for newspaper reports is false; why not admit the necessity for superficiality and stop apologizing for it?

To clinch his point, Mr. Lahey asked his audience to read any newspaper story on the status of international disarmament, and then to ask themselves honestly whether they knew any more about the subject than before they had read the article. Disarmament—just one of dozens of complex topics—is simply not to be explained in the kind of terms that journalists use. Those who understand it, the experts, can't establish contact in the minds of newspaper readers.

All of this might be considered rather shattering information to pass on to a group of young people who are viewing journalism as a lifetime vocation. Ed Lahey was setting the keynote for an 8-week course to follow; some spirit of idealism and enthusiasm was expected of him.

However, despite the negative character of his observations, Ed Lahey had an ideal in mind. He sought to picture the newspaper world of today not as it ought to be, could be, or would be, but as he himself knows it to be. It was his intention to clear away misconceptions and glamorous illusions, and give his young listeners a solid base on which to build their view of the jounalist's life. His was the idealism of the whole truth.

A good part of the whole truth about newspapering as a career, though, came across to these young men not through Ed Lahey's words but in his personality. His bounce, after 30 years of every kind of reporting post, and his zest in telling anecdotes about newspaper work, were highly pertinent testimony.

Ed Lahey summed up by saying that he was lucky to begin his newspaper career 30 years ago. He extended his sympathy to those who were determined now to enter a dying industry. But he fooled no one. Futility of newswriting or not, a man like Ed Lahey would be beating down the doors of the city room today if he had to do it over again.

Coal's Protest Against Foreign Oil

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial, "Coal's Protest Against Foreign Oil," which appeared in the March 6, 1958, issue of the Messenger, Madisonville, Ky.

The editorial is as follows:

COAL'S PROTEST AGAINST FOREIGN OIL

The soft-coal industry's plea to Congress to prohibit excessive imports of foreign residual fuel and crude oils, which are flooding American markets and costing many American miners their jobs and reducing the take-home pay of others, will, it is hoped by coalfield people everywhere, produce some results.

Cutting down on the amount of oil which can be dumped from abroad into the fuel markets of our country is one way to relieve economic distress. Being sound in principle it should not have to be based on a distress basis, of course, but upon plain commonsense. If it can't be based upon the latter, it should be based upon the former, particularly at a time when the administration is claiming to be deeply concerned over the size of our unemployment rolls.

Dr. C. J. Potter, president of Rochester & Pittsburgh Coal Co., a Pennsylvania producer, presented coal's case against foreign oil at a House Ways and Means Committee session. His recommendations to the committee were:

1. That imports of crude oil and petroleum products shall be limited to the 1954 relationship of such imports to domestic petroleum demand. Imports in excess of this ration shall be deemed to endanger national security.

2. That whenever the President determines that imports of a commodity shall not exceed specified levels, any company whose imports exceed such levels shall be subject to a duty on the excess imports equivalent to 30 percent of the value of the cargo at point of entry, and shall be subject to specific penalties, including damages and confiscation of cargo.

3. That the Trade Act be renewed for 1 year, only, to give Congress an opportunity to review compliance with the provisions relating to energy supplies and resources.

Dr. Potter charged, and with sound reason, that importing companies manipulate prices of residual oil to undersell coal. He presented tables showing that resulting market losses have depressed the coal industry's current production level, which is about 15 percent below the output considered necessary to meet mobilization base requirements in time of crisis.

Once coal is crowded out of a fuel market and there is no more competition for foreign oil, prices on imports may be expected to return to very high levels. There is the Florida case, for example, in which a delegation of utility people appeared before Congress in 1956 to protest increases in prices of foreign residual oil, which then had almost a complete monopoly in markets in the Sunshine State.

We have had a lot to say recently about the bad effect upon American mine and mining produced by Export-Import Bank loans and foreign-aid grants to Poland to rebuild its coal industry. There is slim chance, we suppose, for any action to curb this unsound practice, which has already lost the Argentine coal market which heretofore has belonged to American mines and miners.

As for the dumping of excess foreign oil upon our shores, here is something which could be stopped overnight. Not only are the jobs of miners affected, but railroads which haul coal are hit, too, and their protest should be considered along with coal's.

Railroads, in fact, get more revenue from coal than from any other commodity they haul.

Revision of Coal Mine Safety Law Is Imperative in Safeguarding Human Lives

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. VAN ZANDT. Mr. Speaker, legislation was introduced in the Congress on January 13 to bring all underground coal mines in the United States, no matter how many men are employed, under the jurisdiction of the Federal Coal Mine Safety Act of 1952.

Under the present law, mines employing 14 or less men cannot be shut down by Federal coal mine inspectors no matter how hazardous are the conditions existing in the mines. These are known as title I mines. Title II mines—employing 15 or more men—can be ordered shut down by Federal inspectors for violations of the safety law.

I was a Member of Congress when the first mine safety bills were introduced. The legislation received my full support throughout the years when it was being shunted back and forth between congressional committees and from the House to the Senate. The fight was hard and bitter. The United Mine Workers of America, as sponsors of the

original bill, were opposed by the Federal Bureau of Mines, the States bureau of mines, the coal mining industry and other powerful interests of the Nation who were violently opposed to such legislation on principle. It was a desperate and bitter struggle which ended year after year with no action by Congress. The bills died and coal miners died. Meanwhile as many as 2,500 a year were crushed or blown to eternity, as high as 50,000 injured, and many crippled for life. Widows and orphans were thrown upon cold charities for an existence or forced to depend upon friends and relatives, in many cases almost as poor as the dependents themselves.

One of the strongest arguments used throughout the vicious fight was the argument that there was no necessity for the law, because it provided a duplication of State effort which was unneeded. It was a powerful argument and carried great weight with legislators who knew nothing of coal mining or coal law enforcement. So the slaughter went on from day to day, month after month, year after year, until the saying that "every ton of coal mined in America was stained with the blood of the men who mined it" became almost literally true.

Then came Centralia with its 111 burned and blasted bodies and Orient number 2 with its 119 dead, to awaken the public conscience and lend force to the demand that the Congress do something. And the Congress, acting slowly and reluctantly, passed a punchless and toothless law that gave the experts of the Bureau of Mines the right to inspect any mine in America but gave them no power to enforce their findings. Presumably the Congress of the United States had hoped by its action to force the various mining States to provide more rigorous laws and strict enforcement under the threat of having the blame for these explosions laid right upon the doorsteps of the State. If so, it did not work and the killing and maiming went on although in a slightly less degree.

It remained for a colleague of mine from Pennsylvania and a fellow Republican to provide the answer for most of the mining problems of that day, particularly those of major disasters. Representative Samuel J. McConnell, the ranking Republican member of the House Committee on Education and Labor, troubled by the terrific death and injury rate in the coal industry, introduced legislation covering mine safety. The bill was referred to a special subcommittee of the Committee on Education and Labor, under the leadership of the late Augustine B. Kelley, Democrat, of Greensburg, Pa. With thousands of people prophesying defeat, these dedicated men sat down with the experts from the mining industry, the Government and the union, and drafted a bill which became Public Law 552 in the 82d Congress.

I know every man on the Education and Labor Committee at that time is today proud of the part the committee played in passing title II of the coal-mine-safety bill. It was brought out of the full committee with a few added amendments, one in particular by the present chairman of the committee, the Hon. GRAHAM A. BARDEN, which has resulted in the setting up of 9 modern State mining laws, more efficient, more up to date than our own Federal setup. Another amendment, limiting Federal law enforcement to mines employing 15 or more men was accepted in committee in the interests of getting legislation passed. It was accepted under protest by the United Mine Workers of America, the Bureau of Mines and some coal operators. Other Congressmen besides myself doubted that it was good legislation but in the spirit of compromise it was accepted. Both Republicans and Democrats in the Congress gave this bill enthusiastic support and approved it with little opposition. And the result was overwhelming. From an industry which had killed as high as 2,500 men a year and injured many thousands, it became an industry that saw 461 killed in 1953, 396 in 1954, 413 in 1955, 446 in 1956, and 473 in 1957. In 1955 and 1956 there were no major disasters, an almost unbelievable phenomenon. At long last everyone in the business of mining coal—operator, miner, inspector, State and Federal—were working together and the death and injury rate started dropping. It is unthinkable that it should be allowed to start once again on an upward spiral.

Mr. Speaker, I am confident that no member of Congress wants the return of conditions in coal mining which prevailed before 1952. I am sure everyone was highly elated at the success of Federal participation and wants it to continue as long as it is doing a good job. There is plenty of work for all concerned—Federal, State, county, and local safety groups, which aid and implement each other to the benefit of all who work in this necessary and dangerous industry.

I am alarmed, however, over the rising death and injury rate as shown in recent statistics from the Bureau of Mines. Times are hard and economic conditions are forcing workers to accept risks and corner cutting in safety measures that they would not accept under ordinary circumstances. The death and injury rate in roof falls is increasingly alarming. In my own State of Pennsylvania we read regularly of whole mining communities being called upon to spend agonizing days and hours trying to save the lives of poor unfortunates who have taken their lives in their hands trying to make a living in some doghole or abandoned mine.

The most appalling is the fact that proportionately there are 3 deaths in the small mines to every 1 death in the larger mines.

The small mines produced in 1956 only 7.6 percent of the total production of coal, both anthracite and bituminous coal, but they killed 21.1 percent of the men who died in coal-mine accidents.

In 1955 the small mines killed 19.2 percent of the total number of men killed. In 1956 the small mines killed 21.1 percent of the total. And in 1957 the small mines killed 25.9 percent of the total.

The fatality rate in the small mines for 1957 was 4.49 per million man-hours of exposure. In the larger mines the fatality rate for the year was 1.22 per million man-hours of exposure.

In 1956 the small underground mines produced only 28,139,454 tons of coal, while the larger underground mines produced 344,254,843.

Yet there were in 1957 a total of 7,659 small underground mines producing, as against only 1,484 larger underground mines. The charge has been made that many small coal operators purposely employ 14 or less men so that they will not have to obey the Federal law.

In addition to the 7,659 underground small mines, there were (in 1957) 1,586 strip mines in production and 150 auger mines. These surface operations are not covered by the Federal law as far as authority to close them down is concerned.

Latest information, for the period from January 1 through January 30, 1958, shows an ever increasing trend in fatalities in the small underground mines. For that period the small underground mines killed 37 percent of the men killed; the larger underground mines killed 53 percent, and strip mines killed 10 percent.

Mr. Speaker, I have sponsored H. R. 10807, a bill to bring all underground mines in the United States under the jurisdiction of the Federal Mine Safety Act of 1952. Many of my colleagues are sponsoring similar bills. I think the legislation is needed. I can see no justification for saying that a mine which employs 15 or more men must comply with the law and keep its mine in a safe condition while one that employs 14 or less can do as they wish about conditions and no one can intervene in the cause of safety. Personally, I can see no reason why any employer should object to this amendment to the existing law. Any man who keeps his mine in a safe condition has nothing to fear from an inspection whether he employs 1 or a 1,000 men. If it is not safe he should not be allowed to operate. I think every man who enters a hole in the ground to mine coal is entitled to every protection his government—Federal, State and county—can give him. Surely, now with conditions depressed in the coal industry, we should be more vigilant than ever. Since we have found the answer to some of the problems of this dangerous industry it is my opinion we should strive more diligently to further reduce its perils by strengthening the law wherever possible.

Thomas Masaryk: Man of Ideals

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. RODINO, Mr. Speaker, March 7 marks the 108th anniversary of the birth of a man of great ideals, the founder of the Czechoslovak Republic, Thomas Masaryk. Although the life of that re-

public was short lived, nonetheless, the name of the man who gave it creation will live long in the memory of all of us.

I know that the people of the world who hold sacred the ideals of freedom and independence, which inspired Masaryk, join with me in the hope and prayer that the bells of freedom will ring out once again for the subjugated nations of the world. I know, too, that Americans of Czech origin and the people who inhabit that part of the world look eagerly forward to that day.

It is my privilege on this anniversary date to salute those Americans who claim kinhsip with Thomas Masaryk and join with them in just reverence to his memory.

To Halt Preemption

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. LOSER. Mr. Speaker, a rather timely editorial appeared in the Nashville (Tenn.) Banner the other day that should be of great interest to the Congress. The rights of the several States of the Union have been trampled upon of late by the Supreme Court in its rulings in certain criminal cases. The doctrine of preemption has been invoked to invalidate State statutes.

The Committee on the Judiciary, headed by the distinguished gentleman from New York, the Honorable EMANUEL CELLER, is now considering a States-rights bill, which I hope will be favorably reported out of committee.

Legislation on this subject by the Congress is imperative if the States are to retain their sovereignty.

The editorial follows:

[From the Nashville (Tenn.) Banner of March 7, 1958]

TO HALT PREEMPTION: FOR STATES RIGHTS—A LAW

On the House Judiciary Committee Calendar now—and demanding swift action by Congress—is a States-right bill of urgent moment. In brief it provides that State law on a subject with respect to which the Federal Government has legislated would continue to be valid and enforceable unless there is a direct and positive conflict between the two statutes.

It would correct and rebuke the doctrine of Federal preemption which the Supreme Court has so extensively developed in recent years; notably, when it invalidated State laws against sedition on the grounds that the Smith Act superseded them.

That was a blow to law enforcement, e pluribus unum in court treatment of subversive treatment cases.

It is significant, surely, that the proposed legislation to discountenance that view was swiftly presented this time. It is H. R. 3—meaning that it was the third bill cast into that hopper.

What can the private citizen do to speed that matter, as it reads to be speeded, into enactment, for stronger national protection?

Write. Let Congress know (your Congressman) that you are watching, and that as a citizen you demand the action that is needed. It is one way of exercising discipline and restraint upon the Court. After all, the Declaration of Independence specifies that the just powers of government are derived from the consent of the governed. No Constitution-minded element of the governed has consented to any other kind of powers.

Future in Farming

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. BREEDING. Mr. Speaker, there appeared recently in a Stafford County, Kans., newspaper an article contributed by Mr. Jerry Gee, vocational agriculture instructor at Stafford High School.

Mr. Gee, while saluting the Future Farmers of America organization sets forth his reasons for believing that indeed there is a future in farming, a greatly worthwhile and satisfying future; a belief with which I wholeheartedly agree.

Mr. Gee, in the last paragraph of his article, sums up with a thought which I believe can be widely applied in these uncertain times. He states that we must change our thinking and instead of looking at the setting sun, and saying we are through, let us look at the rising sun and say we are just starting. There is work to be done, it is a new day. Let us all pitch in and do it.

JERRY GEE DOESN'T AGREE THAT THERE IS NO FUTURE IN FARMING

(This article contributed by Jerry Gee, vocational agriculture instructor in Stafford High School.)

This week is FFA Week. What does FFA mean? It stands for an organization that is nationwide, the Future Farmers of America. This organization is made up of high school boys all over this country, who are enrolled in vocational agriculture. These boys believe that there is a future in agriculture.

Many times we hear farmers and other people say, "There's no future in farming; I don't want my boy to be a farmer. There are too many hardships to be a farmer."

How many times have you heard or said this in the last month? I hear these words almost every day. But I disagree with this thinking. I believe there is a future in agriculture and always will be. If I didn't, I wouldn't be able to teach these boys vocational agriculture.

At present we hear from all sides of us, "Let's make our boys engineers and scientists."

Who, more than a farmer, is both engineer and scientist? A farmer must be able to repair, design, and make much of his own equipment on the farm; adjust his drill to plant only a few pounds per acre; adjust and set his combine for alfalfa, wheat, and grain sorghums so that it will do a good job of threshing. If these aren't master engineering problems, what are they? A farmer must also figure out how much fertilizer to apply to his soil; how to treat seeds and plants to control insects and diseases; figure feeding rations for his livestock so that they have a balanced feeding program; be able to detect disease when it first starts in a herd and get it stopped before it can spread. This is science and plenty of it.

To the people who say there is no future in farming, I would like to ask this question: If there is no future in farming what are you going to eat in a few years? Farming was and still is the basic profession that we must have. We can live without cars, even though we think we can't; without TV's, without many of the extra things we have, but we can live but a period of a few days without food.

Our population is increasing almost 8,000 people a day in the United States, or about 3 million a year. Our farmland is decreasing several thousand acres a year due to erosion, land taken out of production for highways, factories, etc. It is estimated by the USDA that by 1975 we will need 36 percent more cattle, 16 percent more sheep, 44 percent more hogs, 25 percent more milk, 34 percent more corn, 35 percent more pasture, 12 percent more wheat, and 20 percent more cotton.

I will agree with anyone that farmers have had tough going the last 4 or 5 years, but we here have had them before and we'll have them again; but this does not mean that there is no future in farming.

FFA CREED

I believe in a future of farming with a faith born not of words, but of deeds; achievements won by the present and past generations of farmers, in the promise of better days through better ways, even as the better things we now enjoy come to us from the struggle of former years.

I believe that to live and work on a good farm is pleasant as well as challenging, for I know the joys and discomforts of farm life and hold an inborn fondness for those associations which, even in the hours of discouragement, I cannot deny.

I believe in leadership from ourselves and respect from others. I believe in my own ability to work efficiently and think clearly, with such knowledge and skill as I can secure, and in the ability of organized farmers to secure our own and the public interest in marketing the product of our toil. I believe we can safeguard these rights against practices and policies that are unfair.

I believe in less dependence on begging, and more power in bargaining; in the life abundant and enough honest wealth to make it so—for others as well as myself; in less need for charity and more of it when needed; in being happy myself and playing square with those whose happiness depends on me.

I believe rural America can and will hold true to the best traditions in our national life and that I can exert an influence in my home and community which will stand solid for my part in that inspiring task.

This is the creed of the Future Farmers of America. Let's make it the creed for each of us, farmers and businessmen alike.

Yes, I know that there is a future in farming. All we must do is change our thinking and, instead of looking at the setting sun, and saying we're through, let's look at the rising sun and say we're just starting. There is work to be done; it's a new day. Let's all of us pitch in and do it.

The Reuther Plan

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks, I wish to include the text of a letter I

have just received from a constituent of mine who also happens to be a member of the United Auto Workers at Saginaw, Mich. I am quite certain that there are many members of organized labor, especially in the automotive industry, that share the writer's feelings about Walter Reuther. For obvious reasons, I am omitting the writer's name and address.

The letter follows:

MARCH 4, 1958.

DEAR MR. BENTLEY: Want to thank you for the congressional bulletins. I am a G. M. C. auto worker at Chevrolet Service Plant in Saginaw, Mich. And as men talk in the plants, I am writing a few suggestions that have come up lately. Most men would like to have a 5-year contract with union and companies to insure them against strikes. In their buying power most factory workers buy on installment plans which takes 2 to 3 years to pay for a new car and other home appliances and it also would improve home building and buying. I know a number of workers with 10 to 20 years of seniority in the plant and out on other jobs that would buy but are afraid of the Reuther plan. Most union men are changing views now as this extra $5 assessment is being assessed to them for this strike fund. More men are in favor of a right-to-work law and longer contracts with unions. More are not in favor of a closed shop now than at any time that this question has been talked over with men in plants and out in other fields. By our news of the banks the savings in stocks, bonds, and cash, loan contracts, mortgages were greater in 1957 than ever before. But most people like myself will not spend with a Reuther plan and his big strike hanging over our heads if a strike is called with the company. New car inventory as high as it is most of us will have to use our savings to eat. Will you please talk this letter over with other workers.

Thanks.

Veterans' Benefits

EXTENSION OF REMARKS
OF
HON. IVOR D. FENTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. FENTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter I have just received from my good friend and comrade, Mr. Lewis M. Krebs, Sr., county director, department of veterans' affairs, Pottsville, Pa.

As a veteran of World War I, I have always supported legislation to benefit our veterans, their families, and dependents, and I am pleased to recommend Mr. Krebs' views to my colleagues for consideration in future legislation.

The letter follows:

DEPARTMENT OF VETERANS' AFFAIRS,
Pottsville, Pa., February 28, 1958.

Hon. IVOR D. FENTON,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN FENTON: In my daily work as county director of veterans' affairs, for Schuylkill County, Pa., and my membership in the American Legion for the past 38 years, I have come to realize that the veterans of World War I are really in a separate class of war veterans when it comes to benefits for war veterans by our Government.

After World War I we did not find much help from Congress, and there were:

No $300 discharge bonus (just $60).

No 52–20 club to tide you over for 1 year.

No United States Employment Office to find you a job.

No GI training program for veterans not disabled in war.

No special homes for veterans' (paralyzed, loss of limbs, etc.).

No automobiles for handicapped veterans (loss of limb or sight).

No social security benefits.

No special insurance dividends.

Yes—and there were no local Veterans' Administration offices to file your claims; no county directors of veterans affairs; and no special trained service officers as the many veterans' organizations have today; and you were very lucky to get admitted to a hospital for service-connected disabilities.

Yes, the veterans of World War I are the forgotten veterans when it comes to being a little liberal in benefits to them by a grateful Government now that they are 63 years of age or older, and a great many not covered by social-security benefits.

Yes, a pension, without all the stopgaps that the Veterans' Administration has tied to the pensions of the old veterans of World War I which in many worthy cases keep them from receiving a small pension of $66.15 or $78.75 monthly, would be a great help to them.

In the past 5 years here in Schuylkill County we have had 550 World War I veterans die, or an average of 110 yearly. In a few more years there will not be many of them left.

I am a service-connected disabled veteran of the First World War and I believe that the benefits for the service connected are very liberal at present. But we sure had a tough road to travel before World War II came along and Congress opened the door for veterans' benefits in a more liberal form.

I am asking you to remember the Economy Act of 1933 by Congress, and the grave injustice inflicted upon the disabled veterans of World War I and of the Spanish-American War by that act. Yes, I know because I was one of those affected by having my compensation reduced to near nothing.

Please keep these things in mind when any attempt is being made to cut off the benefits of these old veterans, and any new bill to increase the benefits will deserve your influence and support.

Thanking you for your kind consideration and help in behalf of all the war veterans. I am,

Very respectfully,
LEWIS M. KREBS, Sr.,
County Director, Department of Veterans' Affairs, Courthouse, Pottsville, Pa.

Two Hundred and Seventy-eight Dollars Per Acre Is Average Worth of Illinois Farmland

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, and include a newspaper article entitled "Two Hundred and Seventy-eight Dollars Per Acre Is Average Worth of Illinois Farmland":

TWO HUNDRED AND SEVENTY-EIGHT DOLLARS PER ACRE IS AVERAGE WORTH OF ILLINOIS FARMLAND

URBANA, ILL.—Illinois farmland, worth an average of $83 an acre in 1940, today is worth an average of $278 per acre. Some is valued at $427 an acre, and there's little for sale.

This is the estimate of C. L. Stewart, University of Illinois professor of land economics, and Harold Guither, assistant extension editor for the university's college of agriculture.

Not only is the price of land going up, but land is getting difficult to buy, the two men report in the February issue of the Illinois Banker magazine.

They say that in recent years little land has been offered for sale.

Stewart and Guither attribute zooming prices partly to an increased demand, a result of farmers needing more land to overcome higher machine-operating costs.

Rather stiff competition for land has arisen in areas where farmers have large farm machinery investments and limited acreage to expand upon.

Owners of even limited acreage, Stewart Guither report, hesitate to sell while prices are going up. And owners consider the value of their land a good hedge against inflation.

Educational Standards

EXTENSION OF REMARKS
OF
HON. ROBERT J. McINTOSH
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. McINTOSH. Mr. Speaker, today the American people are engaged in an effort to improve educational standards throughout the country. Before the Congress are a number of proposals with that object in view.

Certainly at the heart of attempts to improve educational standards stands the teacher himself. No scholarship program, however vast, and no Federal-aid program, however extensive, can ever take the place of the character, skill, and devotion of individual teachers. Every effort must be made to provide incentives to well-qualified teachers. The impressively sponsored and staffed Educational Policies Commission said this:

The quality of learning in schools and colleges depends upon skillful teaching * * * the highest single priority, therefore, in responding to the contemporary challenge to American education is the recruitment, education, and retention in the profession of qualified teachers.

Teachers, however, have seldom received the incentives that their crucial role in the life of our society deserves. Through the years, teachers' salaries have lagged behind compensation for other professions and vocations. The average college faculty salary is estimated by the NEA to be around $4,100 for instructors and $5,730 for associate professors. The average salary of an instructor on the college level is less than the average income of an industrial worker. A full professor's salary is only slightly more.

While low salary levels affect recruitment of teachers, this is primarily a problem to be met by local action. But

complex and confused rulings by the Internal Revenue Service on the deductibility of teachers' continuing education costs have discouraged the teacher, once licensed, from pursuing his education to his full capacity. This situation which discourages ambition at the very level where it should be most encouraged is one that falls within the scope of congressional action. Legislation that will permit the teacher to deduct the costs of continuing his inservice training should be enacted.

In a sense, such legislation does not properly fall into the category of tax relief but rather into the category of a just correction of a now existing discriminatory practice against the teaching profession. A lawyer can attend a real estate institute and deduct the costs as necessary expense. An insurance man can take a short course in estate planning and deduct the costs as necessary expense. A doctor can take a refresher course in anaesthetics and deduct the costs as necessary expense. An actor may take a physical culture course to shed excess poundage and deduct the costs as necessary expense. The science teacher, however, who takes a summer course in physics to keep abreast of ever-expanding horizons cannot deduct the costs as necessary expense.

The Celina (Ohio) Daily Standard described the inequity in this somewhat blunt but picturesque way:

> A businessman is after a fat contract. So he loads the prospect into a private plane and flies to Florida. They live in $60-a-day hotel suites, eat the best food, drink the best liquor, take in all of the night spots.
>
> Every penny—the liquor bill and the tips and all—is tax deductible. It is part of the expense of making a buck. But an underpaid teacher goes to school for the summer. He lives in the cheapest room he can find, cooks beans on a hot plate, buys dog-eared text books.
>
> Tax deductible? Are you kidding? Not if he is going to school just because he wants to become a better teacher.

Sounds incredible, does it not? But, incredible as it sounds, it is happening every day. At present, teachers can deduct the expenses of attending a summer school or evening classes only if they take these courses in order to keep their present positions. This concession was made only after the courts ruled in Hill against Commissioner that courses taken under administrative edict were deductible. The Internal Revenue Service has taken a very narrow view of this ruling. In effect, its interpretation holds that a teacher cannot deduct these educational expenses unless he would have been fired had he not taken the courses. This interpretation is so restrictive that its effect has made it almost impossible for a teacher to deduct any educational expenses. A strong recommendation is not enough. It must be a requirement. To take just one example, the Chicago Board of Education does not require that any teacher expend any money to keep a position after passing the exam to receive it. Thus, no Chicago teacher, under this interpretation, is able to deduct any expenses for professional improvement. Examples could be multiplied ad infinitum.

The Internal Revenue Service's defense in strictly limiting deductions by teachers is an alleged lack of statutory authority for deductions. The history of uncertainty in interpretation and ambiguity of regulation on the whole issue seem to suggest that a satisfactory resolution of the problem can only be achieved through clarifying legislation.

In the case of Coughlin against Commission, the courts have upheld the right of an attorney to deduct the cost of attending a series of lectures on taxation. The court pointed out that the attorney was morally bound to keep himself informed and up to date and that expenses of this sort were deductible when directly connected with practices of his profession. Surely, the teacher has an equally great moral obligation—if not greater—to keep himself informed and up to date. Yet even the proposed modifications will not permit him to do so and deduct the expenses.

So clearly do such examples reflect a demand for more just and equal treatment for teachers that 25 Members of Congress, including myself, have introduced bills designed to bring greater justice to the American teacher.

Most of the bills provide that established teachers may deduct the amount of their educational expenses up to $600 in any 1 taxable year, without having to prove that the courses taken were necessary to prevent loss of job.

Many organizations have studied and endorsed this legislation. They include:

The United States Chamber of Commerce which calls for permission for teachers to deduct from gross taxable income reasonable costs for courses taken to increase their competence and professional position.

The National Science Teachers' Association which says the Federal Government can stimulate and assist in this area—opportunities for science teachers to update their knowledge of subject matter and techniques of teaching—by passing legislation to allow income-tax deductions for funds spent by teachers to take inservice and summer courses for self-improvement.

The National Education Association which believes that the Internal Revenue Code should be amended to establish a uniform policy granting tax exemptions for professional expenses.

It is, of course, axiomatic that if the youth of the country are to be well educated, we must have a well educated and well informed body of teachers. With summer school attendance becoming more and more costly, many teachers who would like to take additional instruction are financially unable to do so. The small relief provided by this legislation would undoubtedly enable some teachers to make these expenditures and would provide an incentive to others.

The annual revenue loss is estimated to be—at most—$18,372,374. The legislation does not involve any appropriations for increased salaries or subsidies or Federal control of any kind. It simply extends to teachers the even break they deserve. It is a positive step in the right direction that can be taken now to provide personal incentive to improve our teaching profession.

Everyone agrees that something must be done to help our schools. Here is a simple way to enable teachers to help themselves. This bill will end discriminatory practices against and provide incentive for the most overburdened and underpaid professional in our society: the American teacher.

The Financial Institutions Act

EXTENSION OF REMARKS

OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 10, 1958

Mr. KILBURN. Mr. Speaker, I am sure the Members of the House will be interested in the following insertion. It is part of a speech given by Senator A. WILLIS ROBERTSON of Virginia, at a banquet of group 1 of the Virginia Bankers Association at Virginia Beach, March 8, 1958. I have selected the portions of Senator ROBERTSON's speech which have to do with the Financial Institutions Act already passed by the Senate. A companion bill has been introduced in the House by the gentleman from Georgia [Mr. BROWN]. These bills are now before the House Banking and Currency Committee.

I hope all the Members will read Senator ROBERTSON's clear and concise statement:

> As I started in a speech before the State bank division of the American Bankers Association in Atlantic City last September, there is no group in the United States that is more interested in a sound economy and a stable dollar than our bankers. It was in recognition of that fact that I proposed in the summer of 1956 a review of our banking and credit laws and their codification.
>
> That proposal resulted in a bill, designated as the Financial Institutions Act of 1957, which was passed by the Senate last March and which is now pending in the House along with a companion bill sponsored by Representative BROWN of Georgia.
>
> These bills, unfortunately, have become the subject of misrepresentation and unfounded charges, including one that they are bankers' bills. To put the real facts on record, I want to review with you, briefly, the history of the Senate bill.
>
> Virginia lawyers know how often the general laws of Virginia have been reviewed, new acts codified and published as a new code. Lawyers also know how often the criminal provisions of the United States Code have been codified and a few years ago the Congress codified the tax laws. But, strange to say, never in our history has there been a codification of the Nation's banking and credit laws. Prior to 1956 the banking laws had not even been reviewed since the passage of the Banking Act of 1935.
>
> So, in the summer of 1956, Chairman FULBRIGHT of the Senate Banking and Currency Committee authorized me to conduct a study on behalf of the committee of all the Federal statutes governing banks, savings and loan associations, and credit unions.
>
> All of the Federal supervisory agencies, namely, the Comptroller of the Currency, the Federal Reserve Board, the Federal Deposit Insurance Corporation, the Federal Home Loan Bank Board, and the Bureau of Federal Credit Unions were asked to review their statutes and submit recommendations for

amendments. In addition, the Treasury Department, the General Accounting Office, and the Bureau of the Budget undertook similar studies.

Along with the help of the Government agencies, we also desired the views of private industry. In August 1956, an advisory committee consisting of leading experts representing all segments of the financial field was appointed to assist our committee.

Some critics of the bill have implied that there was something sinister about the advisory committee, and have said that it was terrible to have one. I have never been associated with a finer group of public-spirited men. They paid all their own expenses in connection with their committee work and did not receive any compensation from the Government. Each Senator on the Banking Committee appointed one member of the advisory committee, and the attempts that have been made to impugn the motives of the advisory committee are resented. It is experiences such as this that make private citizens reluctant to serve the Federal Government in any capacity.

In November 1956 our committee held hearings on the more than 180 amendments recommended by the Government agencies. In December, 1956, the advisory committee submitted a report covering more than 200 different proposals.

After carefully reviewing all of the testimony and the recommendations made by the Federal agencies and the advisory committee, the able counsel of my subcommittee, Don Rogers, and I prepared what I announced to the press as a tentative bill which would be the basis for public hearings.

I deliberately eliminated from the tentative bill new policy issues and limited the controversial issues as far as practical to those which had previously been considered either by the Senate or the House but on which no final action had been taken.

This draft was printed as a committee print bill, and in January and February 1957 5 weeks of hearings were held on it. Testimony was received from the Government agencies, all the major financial trade associations, and all private individuals who requested to be heard. As a result of these hearings, the proposed bill was revised and amended and reported to the Senate as the Financial Institutions Act.

The Senate debated the bill for a week and adopted further amendments before it was passed late in March 1957.

There is no basis in this history to support a charge that this is a bankers bill. It is true that the views of the financial industry were solicited—it would be foolish not to. However, we also solicited the views of the Government agencies and of every private individual who expressed an interest in the legislation. And certainly the United States Chamber of Commerce in endorsing the Senate bill was speaking for the business interests of the Nation and not just for bankers.

I do not suggest that this is a perfect bill, and I don't want to imply that I agree with every provision in it. There is room on some items for honest differences of opinion, as was brought out in the debate in our committee and on the Senate floor. But on the whole, the bill is a constructive one and in the public interest. Therefore, I object to anyone characterizing the bill as being dictated by any segment of private industry. To make such a charge is to impugn the integrity of every member of the Senate Banking and Currency Committee and the United States Senate—to say nothing of our splendid committee staff members who worked so faithfully on the technicalities involved.

Those who make the charge that this is a bankers bill never mention the provisions that strengthen the powers of the banks' supervisory authorities. To mention just a few of these provisions: There is the prohibition against conflicts of interest by supervisory agency employees; the requirement for the disclosure of the identity of major stockholders; the authority to limit dividend payments by national banks; the strengthening of the procedure for the removal of bank officers and directors for unsafe and unsound practices; the strengthening of the procedure to terminate FDIC insurance; the prohibition against political contributions by insured banks; and many others. These provisions are specifically designed to give the Federal agencies authority to meet modern day problems and to better protect the depositors of our banks.

It has been charged that there are a great number of sleepers in the bill. I can assure you that the Members of the Senate were not asleep when they voted for the bill. It was given careful consideration.

Among items called sleepers was a provision permitting national banks to write insurance in cities of under 5,000 population. This statute has been on the books since 1916 and was not changed by the Financial Institutions Act. The extraordinary charge has been made that if this provision is continued in the law, it will put the jobs of 200,000 insurance agents in jeopardy.

How absurd. The statute has been in operation for over 30 years, and there are only 77 national banks writing insurance in cities under 5,000 population. This is just one example of the fantastic campaign of misrepresentation that has been waged against the bill. I am happy to say that the National Association of Insurance Agents has not been misled by this accusation and has filed a statement with the House Banking and Currency Committee stating that the association has no objection to the present law.

A great turmoil has been stirred up about another relatively minor provision of the bill. This amendment to the present statute regarding the maximum rate of interest that may be charged by a national bank consists of only one sentence, as follows: "The purchase of obligations or evidences of indebtedness from the actual owner thereof shall not for the purposes of this section, be deemed a loan or discount if such purchase would not, under the law of the State in which the purchasing bank is located, be deemed a loan or extension of credit subject to the interest or usury statutes of such State."

There is nothing mysterious about this language. It merely puts national banks on a par with State banks and is clearly in line with our desire to perpetuate a dual banking system. Yet it has been charged that this provision is "immoral" and would permit national banks to charge 50 percent interest. If those who made such charges would talk to our State bankers and their customers, they would find out how wrong they are.

It also has been charged that the bill would permit banks to make gifts, such as tickets to My Fair Lady and Cadillac automobiles, to their big depositors. This is really a bewildering accusation, because the bill contains exactly the same language as the present Federal Reserve Act concerning time and demand deposits. The irresponsible nature of these charges seems to have no bounds.

I am confident that H. R. 7026, by Representative BROWN, which to a large extent is the companion bill to S. 1451, will be passed and differences between the House and Senate adjusted in conference. It is constructive legislation to codify the banking laws so that bankers can get easy access to the rules under which they operate, and it is in the public interest to make the Federal supervision of financial institutions more effective while helping these institutions to meet the modern-day credit needs of our people.

Last, but not least, this banking legislation recognizes a vital principle of our Government—a dual banking system functioning within the framework of private enterprise. It contains no new encroachment of Federal powers over the rights of the States—a trend which I deplored in a speech at Virginia Beach last October.

Adapting Federal laws to meet modern-day demands without upsetting the delicate balance of powers between Federal and State units is essential if we are to preserve the unique system of government fashioned by our Founding Fathers.

I feel that the Financial Institutions Act is in keeping with that fundamental principle and merits the support not only of bankers but of all businessmen interested in the perpetuation of the American system of competitive enterprise privately financed.

German Lobby and $125 Million War Claims

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following column by Drew Pearson which appeared in the Washington Post and Times Herald of February 23, 1958:

THE WASHINGTON MERRY-GO-ROUND
BIT OF A FUROR OVER $125 MILLION
(By Drew Pearson)

Not even the White House staff knew exactly what the shouting was all about, but a recent White House meeting on paying $125 million to Germany for war-seized property broke up in a verbal free-for-all.

Several top Government officials had been summoned to the White House to discuss what to do about paying off German firms whose assets were seized during World War II.

For 10 years, a free-spending German lobby has been pulling wires to get back money which, under a postwar agreement, the United States isn't obligated to pay. The lobby even hired a prominent Illinois Republican, Gen. Julius Klein, founder of the Jewish War Veterans, to work with Hitler's former financier, Hermann Abs, in order to tap the United States Treasury for the return of German property.

Klein is an influential gentleman with friends in high places. He sold Secretary Dulles on the phrase "sanctity of private property" which President Eisenhower later used in describing the new policy for the payment of German property.

At the White House meeting, two presidential lawyers, Edward McCabe and Roemer McPhee, sat in for Gerald Morgan, the President's counsel, who couldn't attend because of illness. The meeting was supposed to be strictly secret. However, this column can report what happened.

Doug Dillon, former Ambassador to France, now Deputy Under Secretary of State, passed out a document marked "Limited Official Use." This spelled out in legal language a proposal to charge American taxpayers $125 million to pay off both American and German war claims up to $10,000 each. He described the proposal as an equitable plan arrived at after much hard work, and suggested that it should be acceptable to everyone.

"As you know," Dillon added, "the Cabinet approved this last July."

Budget Director Percy Brundage jumped to his feet.

"Don't tell me what the Cabinet decided," he thundered. "I was there."

Forgotten promise

Brundage, who has to find the money to balance the budget, bluntly announced that he would never agree to using public funds to make good these war claims. He reminded Dillon that the State Department was apparently willing to forget about the United States agreement with its 17 World War II allies not to require reparation payments from Germany, but to keep German property seized in the United States and other allied nations in lieu of reparations.

Andy McGuire, general counsel for the Foreign Claims Settlement Commission, pointed out that there was $82 million in the war claims fund, barely enough to settle all American claims against Germany. These have been pressed by American citizens whose property in Europe was damaged by the war.

McGuire, with Brundage chiming in to agree urged sending a bill to Congress to pay off American claimants against Germany, but not German holders of war-seized property.

Port of Detroit Commission Statement on Reciprocal Trade Program

EXTENSION OF REMARKS

OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 10, 1958

Mr. CHAMBERLAIN. Mr. Speaker, the Port of Detroit Commission has adopted a policy statement in support of the extension of the Reciprocal Trade Agreements Act of 1955, now being considered by the Committee on Ways and Means.

There is no question that, with the coming of the St. Lawrence seaway, Michigan's stake in world trade is bound to increase. The commission points out that already 1 out of every 7 workers in Michigan owes his livelihood to world trade. Under leave to extend my remarks, I include the commission's statement at this point in the RECORD:

THE PORT OF DETROIT COMMISSION POLICY STATEMENT RELATIVE TO THE 1958 RECIPROCAL TRADE AGREEMENTS PROGRAM

The Reciprocal Trade Agreements Act of 1955, which expires on June 30, 1958, is the basis of our world trade policy and should be extended because of its many vital domestic and international political and economic effects.

The extension of our Reciprocal Trade Act program is necessary to continue and increase our $30 billion import-export commodity trade business with other countries of the world, plus the additional billions of dollars of income which accrue to our trade service industries. Of further inestimable value are the countless domestic industries which sell all or part of their goods or services to the international trade businesses of the United States.

The 4½ million United States jobs are another popular indication of the value of our world trade business. Best figures available show that 1 out of 7 workers in Michigan owe their livelihood to world trade.

World trade, to a substantial degree, has superseded our aid program. The slogan, "Trade, not aid," has now become a reality. United States trade with Western Europe is as important today to keep these countries from communism, as aid was immediately after World War II. By aiding these countries initially, we knew we were building up their productive capacity to enable them to trade with us. Consistency dictates that we now continue to trade with them whose productive capacity we willingly and knowingly helped to create.

The emergence of the European common market, beginning January 1, 1958, also makes it necessary for us to maintain our present trade program. We must have a liberal trade policy to negotiate with this marketing area having approximately the same population as the United States. Not being equipped with the proper legislative trade tools to negotiate with this new economic union would result in the loss of our current markets in Western Europe. With a proper trade program, the United States can realize the tremendous benefits that the newly formed west European economic union can generate.

In addition to the above valid, well-publicized reasons for a liberal trade policy, there are several less known but equally important ones that carry a tremendous weight in favor of a liberal trade policy. These are in the marine field in general, and the port field in particular.

The prosperity of our merchant marine industry is also dependent on a liberal United States world trade policy. Our merchant marine's annual payroll of $2 billion, its expenditures of $1.3 billion on goods and services annually, and the $3 billion allocated to its shipbuilding program in the next few years, are an indication of the value of our merchant marine to our economy. Since world commerce constitutes a large portion of the business of our merchant marine, it is important that this commerce be permitted to move relatively freely between the United States and the rest of the free world.

Port activity is another large economic national function whose degree of prosperity is in direct relation to the liberality of our trade program. A substantial part of the total business of over 200 United States ports consists of world trade. The direct and indirect operations of our various ports is a multi-billion-dollar operation. The greater the amount of world trade flowing through these ports, the greater their contribution to the local, State, and national economies.

Failure to extend the Reciprocal Trade Agreements Act would undoubtedly result in repercussions by other countries and, to some extent, jeopardize the self-liquidation of the St. Lawrence seaway because of decreased world trade movements, and also would retard the development of its full potential.

Several Great Lakes ports are spending millions of dollars constructing port facilities in anticipation of seaway world trade. In order to realize the many direct and indirect benefits of world trade through these ports resulting from an enlightened trade policy, the extension of the Reciprocal Trade Agreements Act of 1955 is necessary.

For the above reasons we desire to extent our support for the extension bill now before Congress, with the following reservations:

1. The extension of the bill should be for a long term but not less than 5 years. In this way, the United States can prove to the free world that American economic leadership is of a sincere and positive nature, and that we aim to sustain our present world customers and acquire new ones in the competitive world market.

2. Section 4, the escape clause, should be revised in order to function in the best interests of our national security and economic well-being by agreeing to the following definitions:

a. The term "injury" should be defined to limit effects attributed to imports and not to other domestic unrelated causes.

b. Duty increases from escape clause action should not pe made permanent. The United States importing industry should be given the right to apply for review to determine whether duty rate increases are still justified from time to time.

c. The word "industry" should apply to an entire industry and not to a single producer or small group of producers.

3. The point included in the present extension bill (sec. 3 (a) (1)) which permits the increase of tariff rates on the 1934 base, rather than the 1945 base as currently constituted, represents a departure from the main objective of our reciprocal trade agreements program, which is lower tariffs and freer trade and their numerous resultant effects.

Egg Month Gains Further Recognition

EXTENSION OF REMARKS

OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. SCUDDER. Mr. Speaker, recent events here in the past 2 weeks have added to the gaining momentum in the recognition of the egg as a storehouse of vital food elements for good health.

I was delighted to be able to play one of the leading characters in opening the promotional campaign to alert the American people of the intrinsic value of the egg in the human diet. It was also with a great deal of pride that I partook of this campaign since Petaluma, a city in the First Congressional District of California is world renowned as the egg basket of the world.

The following editorial appeared in the Petaluma Argus-Courier, one of the leading newspapers in that area, and I respectfully call it to the attention of the membership and have it inserted in the RECORD at this point:

REPRESENTATIVE SCUDDER KEYNOTES MARCH AS EGG MONTH

An egg a day is the complete way for Americans to receive most of the minerals required for normal good health, Hubert B. Scudder, Representative from California's First Congressional District, which includes this "egg basket of the world," told the House last Wednesday. The Congressman, in an address keynoting March as Egg Month, declared: "Most of the minerals required for normal good health are found in the egg, an important item in a well-balanced meal."

House Members were told that eggs are a source of food and income on two-thirds of the farms in the United States, and that the poultry industry is the third most important source of cash income on American farms. They were reminded, too, that many agricultural crops are consumed in the development of poultry and egg production. The Nation's laying flock, which numbers over 300 million head, consumes about 14 million tons of feed per year, a high proportion of which is grain. This feed has a value of about $1 billion.

"While grains are supported as an agricultural crop and are purchased by the poultryman, he in turn must sell on the open market under a free competitive system. He should, therefore, be encouraged in every manner possible to create a demand for his product," Congressman Scudder emphasized.

The poultry industry has designated March as Egg Month in an all-out campaign to increase egg consumption, and through various advertising media is calling attention to the importance of eggs in the human diet. During this campaign a new word, "wantedness," has been coined. "Wantedness" is the extra quality people see in things they choose to spend their money for—even when substitutes are available at no cost. The housewife must be made to want more eggs, more often, and in preference to other foods that are readily available to her.

To demonstrate the why of his convictions on eggs, Congressman Scudder yesterday noon treated Members of the House and press to a "double yolker" serving of eggs, through the courtesy of the poultry producers of central California.

And what better place to endow the egg with this quality of "wantedness" than here in Petaluma, "the world's egg basket"?

Antichrists on Prowl

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans States of March 4, 1958:

ANTICHRISTS ON PROWL

A stepped-up drive by the Soviet Communist Party against Christianity occasions speculation on how long it will be before the Kremlin masters futilely acknowledge that man's finest instinct cannot be crushed.

It would seem that Russia and her Communist puppets might have learned their lesson in the sanguinary uprisings by the Balkan peoples in quest of dignified freedom of expression.

Apparently certain, though, that the Russian peasant will more readily relinquish his religious instinct, the Kremlin antichrists relentlessly push their atheistic campaign throughout the Soviet states.

Komsomol Pravda, the Young Communist League newspaper, declares religious holidays present a real danger to activities of the league and appeals for a war on observance of church festivals and holy days.

Chernomorskaya Kommuna of Odessa demands intensification of anti-religious and atheistic education and indoctrination of workers. In the Southern Urals, Radio Orenburg complains not enough lectures on scientific-atheistic propaganda are being given.

More than 20 such lectures are given in Kiev, capital of Ukraine, in less than a month's time. Excessive religious activity in that region raises grave concern among Communist authorities.

Pravda Ukrainy, a Kiev Russian language newspaper, demands that atheistic propaganda be intensified in order to counteract the influence of religious sermons on certain unstable and poorly educated people.

And so goes the campaign.

Much consolation may be drawn from the nonviolent complexion of the drive, however. The Communists are displaying awareness that physical persecution strengthens religious conviction and defeats any chance of reorienting the devout in the ways of atheism.

On the other hand, though, the Kremlin forgets that, in line with the essence of Christianity, ridicule and humiliation only fortify hallowed tenets and enhance the intransigence of divine belief.

Oligarchies relatively more powerful than the Russian leaders have tried through millennia to quench the fire of Christianity. What supercilious fools the Communists must be to think they can succeed.

Replies From Auto Manufacturers

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. CHAMBERLAIN. Mr. Speaker, I have had replies from the four automobile manufacturers to whom I wrote recently urging that they reevaluate their price structure in the interest of stimulating automobile production and alleviating the unemployment conditions in Michigan.

In addition, I urged their support of the proposal to repeal the Federal excise tax on automotive vehicles. At the same time, I wrote to the president of the United Auto Workers, Mr. Walter P. Reuther, pointing out that extension of his contract with the auto manufacturers for a period of 1 year would do much to create renewed business confidence and establish good will for subsequent negotiations. As yet I have received no reply from Mr. Reuther.

Under leave to extend my remarks, I am including the text of the replies from Mr. Henry Ford II, president of Ford Motor Co.; Mr. H. H. Curtice, president of General Motors Corp.; Mr. L. L. Colbert, president of Chrysler Corp., and Mr. George Romney, president of American Motors Corp.:

DEARBORN, MICH., *March 6, 1958.*

Hon. CHARLES E. CHAMBERLAIN,
House of Representatives,
Washington, D. C.

DEAR MR. CHAMBERLAIN: Your recent letter is a thoughtful appraisal of the current economic situation as it affects the automobile industry and I am glad to have had the opportunity to read it and discuss it with my associates at Ford Motor Co.

The atmosphere of uncertainty to which you refer is a strong deterrent in the minds of many thousands of people who have the means to buy but who are putting off their buying decisions because they lack confidence in the future. Uncertainty breeds more uncertainty and can lead only to increasing difficulty for all segments of the national economy.

We have reached a crucial point in the recession—the point where optimistic words are of little avail and where prompt and direct action is indicated. Repealing the excise tax on automobiles is certainly the sort of action that will help to reverse the present unfortunate trend. This one step cannot by itself cure every problem, but it could produce beneficial results for an industry which exerts an important influence on the entire American economy.

As far as Ford Motor Co. is concerned, any reduction in the excise tax will be excluded from our charges to our dealers with the specific recommendation that they, in turn, exclude it from their charges to their customers.

With regard to your suggestion for a thorough reevaluation of our prices, I want to assure you that the prices of our products are under constant study. Price reductions, however, cannot be made in the face of rising costs. In the past 10 years, for example, while our labor costs were rising 70 percent, the price of a typical Ford car was increased only 30 percent.

Although it would not be appropriate for me to comment on your proposal to Mr. Reuther, I naturally would be interested to hear his response to this point.

Thank you again for your expression of constructive interest.

Very sincerely,

HENRY FORD II.

GENERAL MOTORS CORP.,
Detroit, February 21, 1958.

Hon. CHARLES E. CHAMBERLAIN,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: I take pleasure in acknowledging your letter of February 17 and attachments. I am in full agreement with the points you make, namely, that public confidence is an importantly significant factor as regards the business outlook; that assurance of a realistic and peaceful settlement of the collective bargaining issues in the automobile industry would strengthen public confidence, and, finally, that a tax reduction would be most helpful with respect to both the willingness and ability of consumers to buy.

I am enclosing a copy of my year-end statement and copies of two letters I have written to the UAW–CIO. As you will note, I spoke out on the first 2 of these 3 points in these documents. As you may be aware, I suggested an across-the-board tax reduction in my recent appearance before the United States Senate Subcommittee on Antitrust and Monopoly. I am confident that such a move would revitalize confidence on the part of both consumers and the business community. My suggestion was given excellent visibility by the press, as indicated in the enclosed brochure with excerpts from news articles and editorials on this subject.

Thank you for writing to me. I appreciate your point of view and your evident willingness to take constructive action regarding these important matters.

Sincerely yours,

H. H. CURTICE.

AMERICAN MOTORS CORP.,
Detroit, February 20, 1958.

Hon. CHARLES E. CHAMBERLAIN,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN CHAMBERLAIN: I have read with care and interest your thoughtful letter of February 17. You suggest three programs to encourage employment: (1) A 1-year continuation of present agreements with the UAW; (2) a reevaluation of automobile prices, and (3) the repeal of the excise taxes on automobiles.

We have, of course, been studying the causes of the present business decline insofar as they are ascertainable. We believe that the fundamental cause of the drop in automobile sales is the excess concentration of power in both industry and the union. The result of this excess concentration has been to force labor costs and consequently prices to such high levels that buyers are postponing car purchases.

Furthermore, in our opinion, this excess concentration has resulted in a lack of product competition with the Big Three automobile manufacturers offering excessively bulky and costly vehicles. This point of view is expressed more fully in my recent statement to the Senate Subcommittee on Antitrust and Monopoly, a copy of which I am attaching.

We believe there is considerable merit to your proposal that the automobile industry

and the UAW agree now to a continuation for at least 1 year of present union agreements. We wish to point out, however, that any such continuation would extend for another year the present inequities between American Motors agreements with the UAW and those of the Big Three. These inequities involve our paying higher wages and more costly economic benefits and practices than do the Big Three.

We have studied and restudied the pricing of our vehicles. We have been eager to keep our prices at a minimum consistent with our costs and the imperative need of being in the black. As nearly as last September, in order to generate more sales and employment, I proposed to our automotive employees and their unions that we explore the possibility of a $100 price rebate. This possibility could become an actuality if our employees, through their unions, would reduce our labor costs to Big Three levels and if, through the cooperation of suppliers and dealers, we could generate additional volume and lower costs per unit. We are still awaiting a reply from the union to this proposal.

We believe that the repeal of the excise taxes on automobiles as suggested in your bill would stimulate automobile sales and employment through the price reduction it would make possible. We hope that the House Ways and Means Committee will act favorably at the earliest possible moment.

Sincerely,

GEORGE ROMNEY, *President.*

CHRYSLER CORP.,
Detroit, Mich., February 21, 1958.

Hon. CHARLES E. CHAMBERLAIN,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: I want to express my sincere thanks to you for your thoughtful letter of February 17 and complete agreement with the goal of stimulating business and employment by strengthening confidence.

With regard to your suggestion concerning a reevaluation of automotive price structures, I want to assure you that Chrysler Corp. has a long-standing policy of pricing our vehicles at the lowest possible level, consistent with labor, materials, and other costs and our obligations to the public, our employees, and the people who have invested their money in our company. As recently as February 6, I reaffirmed this policy at some length before the United States Senate Subcommittee on Antitrust and Monopoly, chaired by Senator KEFAUVER.

Concerning automotive excise taxes, as you know the automobile industry has consistently opposed the singling out of the automobile for a discriminatory tax burden. We have never been willing to accept the concept that a product as essential to the progress and growth of our Nation's economy should be treated the same taxwise as are luxury items.

I deeply appreciate your interest in matters so vital to the automobile industry and I want to thank you again for your thoughts.

Sincerely,

L. L. COLBERT.

Not the Answer

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial entitled "Not the Answer," from the Rockford Morning Star, Rockford, Ill.:

NOT THE ANSWER

President Eisenhower's comments at his press conference Thursday gave some assurance that the administration is not going to be pressured into a pump-priming flood the present economic situation does not warrant. The President said he doesn't believe it is wise to make the Federal Government the most important factor in efforts to defeat the recession.

The President gave assurance the administration will continue to take what it regards as reasonamle steps to spur the economy. When more action is needed, he said, it will be taken—and in time. In the meantime, the administration is watching the situation and preparing for possible eventualities.

President Eisenhower spoke as Democrats in Congress were pushing for revival of the public works administration and crash programs to jack up the economy. Experience has shown that a big recovery job can't be done with public works. Public works didn't solve our economic problems in the Roosevelt era. Today we have a vast Federal highway program and the St. Lawrence seaway project underway, but they are not helping to reverse the business slowdown. The effect of such programs is to increase costs and boost inflation.

As President Eisenhower pointed out, the Government is spending a great deal of money now in its $72 billion budget and some more Federal dollars won't provide the answer to the recession problem. He believes the economy has a way of steering its own course, which is influenced by the attitude of the people.

One thing that should be kept in mind is that the current recession is from the highest peak of prosperity ever reached by the Nation. Compared to the early postwar years, this would have to be called a time of prosperity.

Congress is well advised to be sure of the size of the target before firing everything in its arsenal at the recession now.

Testimony of Joseph S. D'Antoni, M. D., President of the Standard Fruit and Steamship Co., Before the House Ways and Means Committee Hearing on Friday, March 7, 1958

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimony of Joseph S. D'Antoni:

TESTIMONY OF JOSEPH S. D'ANTONI, M. D., PRESIDENT OF THE STANDARD FRUIT AND STEAMSHIP CO., BEFORE THE HOUSE WAYS AND MEANS COMMITTEE HEARING ON FRIDAY, MARCH 7, 1958

My name is Joseph S. D'Antoni. I am president and chairman of the board of directors of the Standard Fruit and Steamship Co. To briefly give a résumé of this company, I would like to say that it began operations in Honduras in 1899, having been founded by my grandfather, my father, and two great-uncles. It became a corporation 33 years ago, has survived 2 world wars and 2 depressions, and now has more than 4,700 shareholders.

The company is domiciled in New Orleans and is primarily engaged in the production and purchase of bananas in four Latin American countries. Certain segments of our operations necessitate our conducting business in 9 foreign countries outside the continental United States. As a banana importer we own 7 refrigerated vessels and have at this time 11 additional refrigerated vessels on charter from 2 to 20 years. We import into 4 ports in United States and maintain for marketing 2 large regional offices with 29 district offices east of the Rockies, dispersed throughout the United States.

My testimony will be both specific, as regards our company, and general, as regards an American corporation operating outside the United States.

The company which I represent imports more than one-fifth of all the bananas consumed in the United States. We obtain these bananas either through direct cultivation of lands we own, through participation contracts with the nationals of a country who own the land and to whom we advance moneys for the development of banana farms and furnish technical know-how, or through outright or contract purchase from local producers.

We are directly concerned with and heartily endorse the extension of the Reciprocal Trade Agreements Act, since, regardless of the type of our operation, under its terms individual agreements have been entered into between the countries in which we do business and the United States. Not only could any change in these agreements seriously affect the conduct of our business, but unnecessary economic problems in countries of Latin America can result in higher prices of bananas for the consuming public in this country.

Let us, as an example, use Honduras, the country in which we have our largest operation, with a fixed gross investment of $29 million. In that country, we have at the present time under cultivation more than 20,000 acres, planted in bananas, citrus, and coconuts, employing in excess of 10,000 persons. We operate 330 miles of railroad to transport our fruit from farms to shipside. We maintain a wharf extending over 1,200 feet into the Caribbean for unloading United States manufactured machinery and goods, and loading ocean-going vessels with our own agricultural products and hardwoods of Honduras produced by others and exported primarily to the United States. We use tremendous amounts of agricultural machinery and implements, fertilizers, insecticides, and other products related to a "central" type of agricultural enterprise of the magnitude of ours. More than 95-percent dollar volume of the equipment mentioned above is manufactured in the United States.

Last year, we bought in excess of $9 million in equipment and materials from United States manufacturers located in 39 of the 48 States. These included such a variety of items as 8 million plastic tags from Yakima, Wash., to $45,000 worth of machetes from Collinsville, Conn., and $35,000 worth of files to keep them sharp from Providence, R. I. A complete tabulation of all purchases in excess of $10,000 during the year 1955 showing manufacturer, location, wide diversity of product, and expenditure was prepared in March 1956 for another purpose. Since it was appropriate to this testimony it is attached as appendix A, while a partial list of typical products purchased from various States in 1957 is attached as appendix B.

Completely apart from this, in 1957 our steamships made 272 voyages and purchases of ship stores totaled well over $1 million. Most of these purchases were made from

small business houses in New York, Charleston, and New Orleans. My object in pointing out these facts in such detail is to convey to you the thought that we, a relatively small company, are merely an example of the direct importance of overseas sales to thousands of United States businesses, large and small.

Our company operates in Honduras under an agricultural concession granted us many years ago. The Reciprocal Trade Treaty between the United States and Honduras strengthens the validity of this concession. The failure of the Congress of the United States to renew the Reciprocal Trade Agreements Act could jeopardize these concessions and encourage the levy of tariffs against the equipment and materials we must bring into Honduras. Such a turn of events would then demand a reexamination by us of the relative economic merits of machinery manufactured elsewhere than in the United States. To date, existing treaties have allowed United States-made goods to remain competitive, but failure to renew the Reciprocal Trade Agreements Act would unquestionably develop unnecessary competition from goods manufactured in Europe and elsewhere.

It is noteworthy that one of the largest manufacturers of agricultural machinery in the United States has made the statement that 35 percent of its production is sold overseas. A good part of our agricultural machinery in Latin America is purchased from this firm. The loss of any part of such a market could cause substantial dislocation to industry and labor in the United States.

Another aspect of our company's particular problem is that in operating our fleet of steamships to carry bananas from producing areas into the United States, these steamers carry substantial tonnages of cargo southbound—over 85,000 tons of cargo in 1957—which helps reduce the cost of steamship operations. If these tonnages are reduced due to elimination of tariff concessions granted to goods manufactured in the United States, our transportation costs will rise correspondingly and this rise will be reflected in the selling price of our fruit to consumers in this country.

I would not wish anyone to interpret my statement as meaning that a failure to renew the Reciprocal Trade Agreements Act would put the Standard Fruit & Steamship Co. out of business. It definitely would not. But it undoubtedly would result in increased costs for us, and these costs eventually would have to be passed on to American taxpayers in the form of higher prices for the fruit we bring here.

Up to this point I have dwelt only on the effects of the reciprocal trade bill as it affects the United States buying public, the economies of our good neighbors to the south, and employment of United States labor. The final implication and its most serious one is the position of the United States in maintaining world peace.

It is an accepted fact that the prestige of the United States in matters military and scientific has suffered substantially as the result of Soviet advances in recent months. Too much has already been written and spoken on this subject for me to have to explain its significance.

We do, however, tend to take comfort in the fact that we enjoy such a predominant lead in economic strength that we will never be overtaken. Does the concept of great economic strength prevail in an era of divide and conquer when the ingredient of atomic warheads is added? True, Soviet industry is being protrayed to us as producing only a fraction of the consumer goods that we in this country produce, and of a type and in a fashion that reflects almost incredible inefficiency, but gentlemen, can we afford to wait for Russia's economy to sink into a morass of inefficiency, and be rudely awakened one day to the fact that the Russians have done in this field what they did in the fields of science and military achievement? We as a country, have not profited by the experiences that led us into World Wars I and II. Already reports of recession are being used by protectionists as a false premise in defense of their cause. They say: "Why have reciprocal trade when 5 million people are unemployed in the United States?"

It is a matter of record that the Russians have developed more than economic beachheads throughout the world. We see daily evidence of Russian trade commissions hard at work developing trade in Latin American countries. High government officials of these countries have stated publicly that communism has already become a menace in their countries. We speak of peace but invariably find ourselves at war to achieve it. This war, whether cold or actual, is not 5,000 miles away, but is in our backyard, and the strongest defense we can begin providing now is the picture of a balanced and potent free economy in action—an economy that provides a high standard of living for ourselves and our allies throughout the world. What we are taught and teach as our free and democratic system is, in effect, our "ultimate weapon."

APPENDIX A

Purchases made by home office in 1955 from vendors supplying in excess of $10,000

Aidmon Bottle & Supply Co., Inc., Brooklyn, N. Y., bottles	$10,694.54
Ardco Manufacturing Co., Jersey City, N. J., locomotive parts	19,496.00
Armour Fertilizer Works, New Orleans, La., fertilizer	25,277.24
American Brake Shoe Co., New York City, car wheels	10,858.80
American Cast Iron Pipe Co., Birmingham, Ala., cast iron pipe and fittings	12,201.19
American Can Co., New York City, cans	72,757.83
American Creosote Works, Inc., New Orleans, La., creosoted piling	13,749.66
Armstrong Cork Co., Lancaster, Pa., crowns and bottles	115,281.00
Baldwin-Lima-Hamilton Corp., New York City, locomotive parts	15,556.77
Barade & Page, Inc., New Orleans, La., sodium bisulphate, etc	15,457.82
Batesville White Lime Co., Batesville, Ark., lime	34,996.50
Brown & Sites Co., Inc., New York City, locomotive parts	15,077.46
Colgate-Palmolive Co., Jersey City, N. J., soap and toilet articles	8,976.98
Columbia Malting Co., Chicago, Ill., malt	87,327.00
Cordeleria Modelo, S. A., Merida, Mexico, banana twine and rope	41,033.87
Crown Cork & Seal Co., Inc., Baltimore, Md., crowns and filler parts	83,772.56
Cudahy Packing Co., New Orleans, La., meats	11,513.78
Continental Can Co., New York City, polyethylene, cellophane	95,167.80
Caterpillar Tractor Co., Peoria, Ill., diesel engines-tractor parts	67,143.03
G. H. Charbonnet & Son, Inc., New Orleans, La., dry goods, etc	16,344.85
Ecusta Paper Corp., Pisgah Forest, N. C., polyethylene tubing	159,744.49
Esso Standard Oil Co., New York and New Orleans, fuel oil	2,075,605.83

Purchases made by home office in 1955 from vendors supplying in excess of $10,000—Continued

Extruders, Inc., Hawthorne, Calif., polyethylene tubing	$55,269.35
Fleischmann Malting Co., Chicago, Ill, malt	42,026.96
Froedtert Grain & Malting Co., Milwaukee, Wis., malt	58,990.27
Fulton Bag & Cotton Mills, Atlanta and New Orleans, bags and polyethylene tubing	67,168.10
Grace Chemical Co., Memphis, Tenn., urea	300,245.19
A. Gusmer, Inc., Woodbridge, N. J., malt, etc	27,109.04
General Electric Supply Co., New Orleans, La., electrical supplies	13,597.55
Hardie Manufacturing Co., Hudson, Mich., spray pumps and parts	26,347.44
Illinois Cereal Mills, Inc., Paris, Ill., brewer's corn flakes	73,264.00
Ingersoll-Rand Co., New York City, engines, pumps, parts	135,110.69
Koppers Co., Inc., Pittsburgh, Pa., Wolman's salts	37,931.40
Kieckhefer Container Co., Camden, N. J., cartons	54,605.06
Kimberly-Clark Corp., Neenah, Wis., kimpak	79,390.22
R. G. Lafaye Co., New Orleans, La., tomato paste, seafoods	23,317.92
Land O'Lakes Creameries, Inc., Minneapolis, Minn., powdered milk	22,983.72
Longview Lime Corp., Birmingham, Ala., lime	11,243.75
Lone Star Cement Corp., New Orleans, La., cement	20,958.50
Magnolia Petroleum Co., New Orleans, La., lubricating oil for ships	22,726.19
George J. Meyer Mfg. Co., Cudahy, Wis., bottle washer parts	12,792.52
National Oats Co., Cedar Rapids, Iowa, oatmeal-cereal	19,487.50
National Malting Co., Paterson, N. J., malt	23,552.96
Nestle's Products, Inc., New York City, milk and candy	28,621,85
Nicholson File Co., Providence R. I., files	21,475,32
Owens-Illinois Glass Co., Toledo, Ohio, bottles	33,635.07
Pillsbury Mills, Inc., Minneapolis, Minn., flour	53,073.45
C. T. Patterson Co., Inc., New Orleans, La., hardware and supplies	36,777.65
Paul, Rice & Levy, New Orleans, La., ship supplies	19,947.32
Phelps Dodge Refining Corp., New York City, copper sulphate	1,291,764.90
Quaker Oats Pan-American, Inc., New York City, oatmeal, etc	21,356.22
Ross Bros., Fort Worth, Tex., mules	29,080.96
Schwill, Albert & Co., Chicago, Ill., malt	39,977.52
Standard Supply & Hardware Co., New Orleans, La., hardware and supplies	34,438.60
St. Clair Lime Co., Oklahoma City, Okla., lime	17,881.25
Stauffer, Eshleman & Co., Ltd., New Orleans, La., hardware and supplies	88,571.55
Theonett & Co., Chicago, Ill., flavorings, etc	20,970.65
The Texas Co., New Orleans, La., lubricating oil and grease	75,969.59
Utley Paint Co., New Orleans, La., paints, etc	11,307.13

Purchases made by home office in 1955 from vendors supplying in excess of $10,000—Continued

United Paper Co., New Orleans, La., bags, etc	$11,174.51
Van Der Horst Corp. of America, Olean, N. Y., cylinder liners restandardized	12,423.71
R. T. Vanderbilt Co., Inc., New York City, Vancide PEPS	37,602.00
Visking Corp., Terre Haute, Ind., polyethylene tubing	234,448.91
Wholesale Market, New Orleans, La., meats	20,514.51
Woodward, Wight & Co., Ltd., New Orleans, La., hardware and supplies	23,778.09
Southeast Supply Co., Charleston, S. C., ships' supplies	66,092.78
	6,375,039.93

(Prepared by purchasing and accounting departments, Mar. 16, 1956.)

APPENDIX B

STATE AND TYPICAL PRODUCT

Alabama: Agricultural lime, valves, hatchery supplies.
Arizona: Water filters.
Arkansas: Agricultural lime.
California: Canned fish, polyethylene plastic sheets, hops.
Colorado: Porcelain products, rat poison.
Connecticut: Machetes axes and shovels, hardware.
Delaware: Paint, chemicals.
Florida: Citrus wrapping and packing materials.
Georgia: Brewery machinery, polyethylene plastic sheet, textiles and thread.
Idaho: Hops.
Illinois: Farm machinery, dietetic foods, engines, bottles, brewers flakes.
Indiana: Soft drink supplies, pharmaceuticals.
Iowa: Locomotive parts, machinery parts, foods.
Kansas: Aircraft and parts.
Kentucky: Cigarettes, soap machinery.
Louisiana: Orchard spray oil, fertilizer, salt, containers.
Maine: Canned sardines.
Maryland: Bottle closures, tolletries and cosmetics.
Massachusetts: Packaging machinery.
Michigan: Motor trucks, pharmaceuticals, railway motor cars.
Minnesota: Railway motor cars, engines, dairy food.
Mississippi: Crates, disinfectants.
Missouri: Brewery machinery, veterinary medicines, beverage dispensers.
Montana.
Nebraska: Brewery supplies.
Nevada.
New Hampshire.
New Jersey: Cartons, bottles, pharmaceuticals, polyethylene plastic sheets.
New Mexico.
New York: Textiles, battery goods, clothing, copper sulphate.
North Carolina: Packaging materials, tobacco.
North Dakota.
Ohio: Polyethylene plastic sheets, Jeeps, bottles, foundry products.
Oklahoma: Agricultural lime.
Oregon.
Pennsylvania: Pharmaceuticals, machinery parts, bottle closures, locomotives.
Rhode Island: Files.
South Carolina: Oil mill supplies.
South Dakota.
Tennessee: Gasoline lanters, urea, saddlery supplies.
Texas: Copper sulphate, mules, chemicals.
Utah: Dairy bottling supplies.
Vermont.
Virginia: Baked goods.
Washington: Plastic tags.
West Virginia: Laundry supplies.
Wisconsin: Malt, machinery, locks and hardware, cleaning materials.
Wyoming.

Address of Mr. Wade W. Hollowell

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Monday, March 10, 1958

Mr. SMITH of Mississippi. Mr. Speaker, the Mississippi Valley Association is today recognized as one of the outstanding organizations in the country, dedicated to the sound development of our water resources.

A great deal of the credit for the fine record of this organization should go to its recent president, Mr. Wade W. Hollowell, of Greenville, Miss. Mr. Hollowell, now chairman of the board of directors, had a very successful year in stimulating constructive activity in this great organization.

All of the people of the Mississippi Valley are indebted to his efforts toward the constructive development of our natural resources. Under unanimous consent, I include Mr. Hollowell's address as president of the Mississippi Valley Association made at the annual convention of the organization in St. Louis on February 10.

The address follows:

REMARKS BY W. W. HOLLOWELL, PRESIDENT, MISSISSIPPI VALLEY ASSOCIATION, BEFORE THE 39TH ANNUAL MEETING OF THE MISSISSIPPI VALLEY ASSOCIATION, ST. LOUIS, MO., FEBRUARY 10–11, 1958

This report will deal but very briefly with the activities of the last year, for we have prepared a little booklet to be distributed amongst our membership reflecting the progress made and the accomplishments of the association either by its own efforts or along with many other forces interested in water resource development in relation to the platform which you adopted at the annual meeting last year.

I would like to mention; however, a few matters not mentioned in the report. During the last year either your chairman of the board or your president were able to meet in every area of the Mississippi Valley Association, including the entire Missouri Basin from Kansas City, North, Minneapolis, Chicago, New Orleans, Shreveport, and Little Rock. Your president was represented by one of our senior staff members in a meeting in St. Louis and in the Ohio Valley. It is self-evident that the Mississippi Valley Association more strongly represents all elements of water resource interests in the Great Mississippi Basin than ever before and the results of the past year are convincing evidence of the need for one organization as this one, representing transportation, navigation, flood control, conservation, pollution, and industrial development to serve as a clearinghouse and a catalyst for all of those organizations specifically devoted to the interest of only one of these phases of water-resource development.

During the past year a Mississippi Valley Association office was opened for the first time in Kansas City because of the problems in lower Missouri area.

In my meeting with the directors through the various districts I feel I am safe in saying that the association is strong.

Added emphasis has been placed on water pollution and industrial development during the past year at the request of the membership and am happy to report that progress is being made in the organization of a water pollution committee aimed toward development of a concern on the part of governments, States, municipalities, and industries on the importance of protecting the streams which the American people have so devotedly controlled for useful purposes.

The future of the valley association holds many challenges. Let me begin by mentioning the challenges presented to the water-transportation industry. As a believer in private enterprise and the need for the profit motive for total development of our economy, I have admired for many years the development of the transportation system on our waterways, even in the face of governmental owned or governmental subsidized barge lines. As evidence of the strength of the profit system we have today a fine system of water transportation for all commodities, such system has about even the largest Government-owned organization. The threats to this industry are great. There seems to be a trend toward discounting the philosophy of our Nation's founders. Thomas Jefferson left as one of his endowments a philosophy that the waterways system of America are free for the use of all Americans so long as the rights of each user is respected by the other. Thomas Jefferson specifically with his farsighted vision appealed against the imposition of any type of tolls on other than manmade water systems. Now the water-transportation industry, as a successful result of private enterprise, is faced during the year with very direct threats; namely, the imposition of tolls and user charges on our waterways. At the urging of other modes of transportation which have not been able to settle their own differences and which have become enmeshed in a tangle of governmental controls and interferences, would now like to see controls imposed on those whom they believe to be their competitors, despite the economic impact. I do not propose to debate the issue, but I take sides and say this is a challenge which you as members of the Mississippi Valley Association must meet because it is a direct threat to all of our waterways projects.

The theoretical philosophers would have us believe that because the Tennessee Valley Authority has been so successful, the Missouri Basin can only succeed economically through the imposition of bureaucratic control of the Missouri Basin. The basin developments successfully were accomplished by concerted effort on the part of all interests, both private and governmental on the basic premise that the waters of the Missouri should be and are being controlled; first, for flood control; second, for navigation; third, for soil conservation; and finally for incidental power generation. We are being beseiged by those whose philosophy approves governmental ownership for all of our economy, including the generation of electric power as the primary purpose of stream control. As the Missouri Basin goes on this Government power question, so will go the rest of the Nation. I challenge the members of the Mississippi Valley Association and all interested in the free-enterprise system of the Nation to make every effort to refute the false premises of the Government power people and to defeat in the Congress all efforts to change the basic philosophy under which that great system on the Missouri River has been developed in the last 15 years.

Along with this objective of Government power proponents there is an effort to discredit and relieve the civil functions from the Corps of Army Engineers as an efficient,

proven nonpolitical corps training career engineers, the Mississippi Valley Association has an obligation to preserve the function of the Corps of Army Engineers.

Since I became a man at the age of 21, America has been in one crisis, out of that crisis into another one. The latest crisis to stampede America has been the sputnik. Without discounting the importance of the sputnik, because I am not professionally qualified to do so, I do know that in some quarters we are stampeded to expend all funds for the protection against external threats at the expense of a strong American economy. It is readily apparent that dollar economies will have to be made. We know that we must spend two times as much on a dam in 1959 as the dam would have cost in 1949, and we do know that the inflation of our dollar, particularly the inflation of our labor dollar, has caused a great deal of this increased cost. It is a challenge to this association and others like it that the strength of middle America be maintained and that strength includes the protection of our cities and States from flood and erosion and the development of proper navigable channels to tap the Nation's resources still untapped because of the need for water, but it is further a challenge that this be done as economically as possible with a curb on inflated prices; further, that new starts be limited to the expenditure of those dollars vital to the economic and commercial well-being of the areas affected. As patriotic and trained water resource interests we must distinguish between what is good for the Nation versus what is good only for the interests of a very few in order to conserve dollars. Our platform prologue is still applicable: "Let's keep the Mississippi Valley the greatest in the world."

The program of the Missisippi Valley Association has traditionally been limited to the endorsement of projects that show a high ratio of benefits to cost. Careful scrutiny has always been exercised to maintain the absolute integrity of the association's platform.

The present state of world and domestic affairs makes it particularly imperative that all projects be even more carefully screened, that each one can be justified as an investment in the future welfare of the valley and the Nation, and of importance to national security. This platform has been prepared with these standards constantly in mind.

Along this line it is up to each one of us to support our representatives in the halls of Congress against the encroachment of their authority by an appointed Budget Bureau, a further evidence of the trend toward rule by appointed bureaucrats rather than by elected representatives. We are losing sight of the checks and balances intended by our Constitution in this and many other fields. From these remarks it is apparent there are great challenges affecting all America indicating a need for the leadership of the Mississippi Valley Association in water resource development.

I am certain that my successors in office will accept these challenges.

This has been a great year and a wonderful experience to be associated with the members of our executive committee and with the tremendous staff members who carry on the day-to-day work of the Mississippi Valley Association. To them I would like to say thank you and to the membership as a whole I should like to give my best salute for the cooperation and judgment in the matters in which we have been so vitally interested in the past year.

The Turn of the Thumbscrews

EXTENSION OF REMARKS
OF

HON. CHARLES A. BOYLE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 6, 1958

Mr. BOYLE. Mr. Speaker, on March 9 the Sunday Star, a North Side Chicago newspaper, edited and published by Leo Lerner, Herrick award winner, contained in his famous The First Column a most provocative article entitled "The Turn of the Thumbscrews." The explosively dynamic Mr. Lerner, one of the most picturesque and beloved persons in the newspaper business, has endeared himself to the reading public by his positive stance against inhumanity, injustice, and abuses in all branches of government. It is with pride and pleasure that I present his latest column, as follows:

THE FIRST COLUMN—THE TURN OF THE THUMBSCREWS

(By Leo A. Lerner)

Did you ever write something explaining how you feel about a certain subject and then want to write more because you feel you have not explained it properly?

That is how I feel about my last column on foreign aid, as it related to our China policy and the possible deportation of Hsuan Wei, whom we are trying to hand back to Chiang Kai-shek to feed to a hungry firing squad.

A letter from a reader, unsigned, said last week that I am a terribly prejudiced man. The writer of the letter objected to my stand in favor of paroling Nathan Leopold and then accused me of prejudice.

Well, I do admit to a prejudice—in favor of any underdog. One of the things I hate to see is overpunishment, no matter for whom. And of course, if a man hates anything, even something unjust, he can be accused of having a prejudice, even if it's against something bad. If all prejudice is alike, I must plead guilty.

Mr. Wei is not a Nathan Leopold, but is a Chinese, and here I find myself appalled by the fact that the Immigration and Naturalization Department said the other day to Congressman SIDNEY R. YATES that they will proceed to make all possible efforts to deport him if the Congressman's private bill to save Wei fails.

It just doesn't happen to make any sense to me to deport a human being to death.

I would feel the same way about any human being who finds himself in a tough spot, I say to the anonymous letterwriter who accuses me, and I am not ashamed to say that it makes no more sense to turn the thumbscrews on a man than it does to put good money after bad.

I wish that we would stop being unreal about what we are doing with our foreign aid. At one time it seemed like a good idea to support the Chinese Nationalist Government. As time went on, this idea became less and less real, but we are still doing it.

Mr. Dulles once used the expression "unleash Chiang" in a speech, suggesting that we were holding the hound in check, but at the same time admitting he was our dog. You can't unleash a dog unless you have the key.

Today that idea is not only foolish but extremely silly. And worse is the fact that Chiang is posed in a hopeless position where he hangs on by our feeding and whatever dignity he can get out of being our pup.

Mr. Wei, who spoke against him and then asked us for asylum, is quite likely to be shot in the back of the head, not so much because Chiang is determined to do it and this can be proved, but on the utterly inevitable conclusion that a ruthless dictator frustrated at home cannot be prevented from taking out his wrath on the nearest object of his disaffection.

The position of the United States Government is almost as bad as Mr. Chiang's. He that keeps a mad dog can become one. Rabidity is highly contagious. We won't bite Mr. Wei ourselves, but, having billions of dollars invested in Chiang, we will feed him a live human being because we are as frustrated as he is. We have so much respect for our dough, we can't think straight.

And here is where we come to the rest of the foreign aid program. The one thing in this life a man or a nation must try to do is to keep out of the company of criminals and lechers. The United States of America is not succeeding in this.

And yet, through some subtle process that goes with abandoning our principles, we have come to the place where most of our allies are some kind of hounds, from oil lechers to Fascists, from quasi-Communists to real Reds. There are only a handful of decent countries in the whole foreign aid program, so low have we fallen.

Before you get me wrong, I'm still for technical and economic aid, but I think we ought to be more realistic, honest, and practical about it. We should openly recognize the kind of people with whom we are doing business.

We should say to them, "We want fair elections in your countries or no help."

Or, "Every piece of American goods should be marked 'from your friends in the U. S. A.'"

Or, "If you touch a hair on the head of a man we return to you, now or ever after, we are through with you forever because we never forget an injustice, even to one man."

Or, "If any of this money goes into graft or corruption you are through."

Since we are openly handing out money to get friends, let's at least make them friends, even if they are bought ones, and not dull our palms with entertainment of unfledged comrades, on the right or the left.

It is sad and sickening that we have done so much dirt to our friends among the decent governments, while we make love to the least admirable. For instance, we brought on the whole Nasser cycle by mistreating Britain at the time of the Sues. All of a sudden we got a jitter of morals, although we have had no scruples about people like Generalissimo Franco or the Chinese island 'gissimo.

We never really made any good effort to help the Hungarians in their revolution, and we even abandoned the refugees.

The only decent democracy in the Middle East, Israel, is not allowed by us to have arms to defend herself in an increasingly menacing situation.

France needs our help and sympathy, not a pushing around and American neutralism. We won't stand for any neutralism from her, why should be tread so lightly when she needs help so desperately?

The world grows more complicated and our thinking grows more muddy. We have slid a long distance downward because the sliding is so gradual we now take for granted that which 10 years ago would have horrified us.

It is never too late to go back to clear and sharp thinking and a moral foreign policy, which includes the best slogan I know, "Honesty is the best policy."

The Right Way To Give Economic Assistance Abroad

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following portion of a report on our mutual security program in Libya by Mr. Marcus J. Gordon, who is director of our United States economic assistance mission there. Mr. Gordon's testimony before the Committee on Foreign Affairs illustrates vividly that we get more credit and good will for our aid if we do not try too hard, and too obviously, to get credit. So often it is easier to give aid than it is to help other peoples help themselves:

We are trying a variety of approaches in our Libyan projects, in order to obtain a maximum of development activity at a minimum cost. Some of our assistance is on a self-help basis. In the early stages of our program, we were persuaded that every man must receive a full day's wage for any work he was induced to do. Because of poverty, malnutrition (and perhaps tradition) it was felt that things must be done for the people, rather than on the basis of helping them to help themselves. However, we determined that it was important in all cases to require people who were to benefit from a project or activity to invest something in it. This concept was accepted slowly at first but has now gained widespread appreciation. More than 100 old Roman cisterns have been cleaned and thousands of cubic yards of earth dikes constructed on a self-help basis. More than 1,000 individual farmers are engaged in improvements using tools which we lend them, and in accordance with technical instructions given. Three communities are providing the labor for the construction of elementary schools. Our big problem has become lack of technical personnel to respond to the numerous applications for self-help assistance. We have received about 2,000 applications from individuals and tribes who will provide the labor to clean their cisterns, if we will give technical advice and furnish cement. This has been an interesting experience in human relations. We have found without exception that the people are prouder of their improvements when they have had to make a substantial effort, and that they have a higher regard for us when we do things with them rather than for them. A shiek will print "Thanks to America" on the wet cement of a cistern when he has had to furnish his own labor, even though the ownership of the cistern may be in doubt, but he will not likely do so if he has been paid in full for the job.

We are also trying various forms of incentive payment plans to induce farmers and communities to undertake improvements such as terrace and dike construction, tree planting, developing small irrigation systems from springs, etc. In some instances this has taken the form of token cash payments. In other instances we have used surplus wheat. In still others we have used a combination of the two. The results have been excellent.

The Libyan Government has given considerable publicity to the American aid program. A report was issued by the Government about 6 months ago entitled "Accomplishments of the Libyan Government Economic Development Program Made Possible by American Aid." It was not a journalistic model, but it does give a factual account of everything that had been done and was underway at that time, financed by our assistance. It has received wide distribution in Libya both in the English and Arabic languages. All Government officials, schools, and libraries have received copies. Also the report was run serially in the principal newspapers of Libya.

Cancer Fight Mounted

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. RAINS. Mr. Speaker, I would like to call the attention of the Congress to the cancer detection program promoted by the West Point Manufacturing Co. in Alabama's Chattahoochee Valley.

This drive, aimed at getting people to see films and read literature on how cancer may be detected, is one of the most comprehensive programs a private company has ever undertaken in the cancer field, according to the American Cancer Society.

The West Point Manufacturing Co. and the thousands of citizens in Lanett, Shawmutt, Langdale, Fairfax, and Riverview who are assisting in this drive are to be commended.

The following editorial from the Anniston (Ala.) Star, March 4, 1958, describes the cancer detection program underway in my district:

CANCER FIGHT MOUNTED

Operating 10 textile mills in 5 Alabama communities strung along the Chattahoochee River, the West Point Manufacturing Co. hardly can hope to escape union labor's customary charge of paternalism where one industry dominates the economy of a given area.

But if West Point Manufacturing's employee relations are fatherly, the kind of person anyone familiar with its policies would picture is a kind and helpful man. The valley towns are widely acclaimed for their modern facilities, cleanliness, and good order.

And they've gotten in the news again just recently by reason of a unique campaign West Point Manufacturing currently is waging.

The Wall Street Journal of last Wednesday carried a front page story telling of an incessant sales pitch via radio, TV, and newspapers that is being directed at residents here in this charming valley, meaning the Lanett-West Point region.

The article hastens to point out, however, that the effort is being put forth, not to sell any consumer goods, but to cut down on cancer's toll among 7,500 workers and their families.

Described by the American Cancer Society as one of the most comprehensive efforts a private company has ever made in the cancer field, the aim is to get adults—especially those over 35—to witness two films on early detection of cancer, to read some pamphlets on cancer's seven danger signals, and to visit their doctors if they have any of the signs.

It seems that on one particular day that the movie was shown in 4 local theaters, 900 persons saw it, and soon after, 6 of that total had successful operations to remove malignant growths.

The reporter for the Journal quotes Joe Lanier, president of West Point Manufacturing, as modestly saying: "What we are doing here might not be practical for some companies in other places."

This observation errs on the side of overcaution, we believe. For clearly the techniques being used to curb cancer in the Chattahoochee Valley could be adapted to other localities. And the cost to sponsoring firms would not be great, Mr. Lanier having estimated the out of pocket outlay by his company at less than $500.

Serious Problems of the Aging

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. MACK of Washington. Mr. Speaker, during the past 20 years the problems of our senior citizens have properly become the subject of considerable legislation both on the State and Federal Government level.

We now have a Federal social security retirement program as well as other retirement systems covering selected groups of workers. It is serving a good purpose to the extent it has been developed.

With the number of our elder citizens—those over 65 years of age—increasing at the rate of 500,000 a year it is time we took stock of our present retirement program. There are many thousands of our senior citizens who are still not receiving the care they should have under our high American standards.

Many of our magazine and newspaper publishers are now asking questions about our plans for improving the declining years of our citizens. Such an inquiry is an editorial from the Vancouver, Wash., Daily Columbian which I ask to have printed at this point in the RECORD.

The editorial follows:

SERIOUS PROBLEMS OF THE AGING

The public is becoming more and more aware of the problems of the aging as a growing percentage of the population reach advanced years. It is well that this understanding becomes widespread because the problem is getting more difficult and complex all the time.

In just half a century, the aged in this Nation have increased fivefold. At the turn of the century there were only 3 million Americans 65 years of age or more. Today the estimate is 15 million; by 1975 the total is expected to rise to 20 million. The number increases by one-half million a year, or about 2,000 a day.

To accommodate the large numbers of those of advance years who need continuing care, the country has 25,000 nursing homes. It is estimated that these establishments house 450,000 patients, with an average age of 80 years.

To improve care for the aged will require a coordination of public and private programs. Some 7 million now receive benefits under the social security retirement program but a great number are on public assistance. Nursing homes are expensive and oftentimes overcrowded.

Persons over 65 have a high hospital admission rate and also stay in hospitals longer than younger persons. And, relatively few older persons are protected by health insurance.

These are some of the many facets of the problem. We must have a clear understanding of them before we can find the answers.

Reciprocal Trade

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. DORN of South Carolina. Mr. Speaker, the reciprocal trade bill I am introducing today is the only reciprocal trade bill before Congress at this time. My bill will promote an increase in foreign trade on a truly reciprocal basis.

The following is an analysis of my bill which I believe an overwhelming majority of this Congress can support:

SECTIONAL SUMMARY

This bill spells out a declaration that the Congress seeks to restore reciprocal, mutually advantageous trade with friendly foreign nations in a manner which is consistent with a sound domestic economy, in harmony with broad aspects of our foreign trade policy, and also protects domestic agriculture, industry, and labor and benfits our national security.

Section 360 of the bill continues in effect existing rates of duty, including rates established by trade agreements. Even though existing trade agreements be cancelled, there would be no automatic increase of such rates.

Section 361: The Tariff Commission is renamed and designated as the legislative agency to carry out the policy of the Congress. There is vested in it additional powers to carry out its duties as the legislative agent to whom the Congress has delegated the task of administering the provisions of the bill. The name of the Tariff Commission is changed to the Foreign Trade Board and the present Tariff Commissioners continue to be members of the Board.

This section of the bill also provides that the number of members of the Board shall be increased to seven and that members hereafter appointed to the Board shall be removable from office only by the Congress.

Section 362: This section sets out duties to be performed by the Board in carrying out the general principles of the bill so as to vest in the Board full responsibility to provide information by which the President shall be guided in negotiating trade agreements.

This section also establishes criteria by which the Board may determine whether a trade agreement would be reciprocal and beneficial to the United States and a foreign country. It also describes types of discriminations against the commerce of the United States.

This section further provides that the Board, rather than an executive department agency, shall prepare a list of items on which it is proposed to negotiate a trade agreement with a foreign country.

Section 363 directs the Board to advise the President as to the extent to which duties and other import restrictions applied by foreign countries affect exports from the United States.

Section 364: This section establishes the principle that trade agreements shall be concluded on a bilateral basis with a foreign government as to any or all items of merchandise for which each foreign government is a principal supplier to the United States.

This section also utilizes provisions of existing law, modified in some respects, requiring public hearings to be held in connection with items which are intended to be included within a proposed trade agreement.

Section 365: This section continues the existing provisions of law defining domestic industry.

Section 366 is an entirely new provision of law in which the Board is directed to establish peril points. Criteria are set forth to guide the Board in making peril-point determinations prior to the negotiation of a trade agreement, including the establishment of quota limitations.

Section 367 is a modification of existing law as to application of reductions in rates.

Section 368 continues existing law limiting the term of a trade agreement to a period of 3 years, subject thereafter to termination upon 6-months' notice. It also requires that each foreign trade agreement concluded pursuant to provisions of the bill shall be reviewed periodically in order to determine whether the entire agreement continues to be truly reciprocal and mutually advantageous.

This section continues the provisions of the existing law insofar as the most-favored-nation principle is concerned. It amends existing law in that it spells out categories of discrimination against American commerce which nullify or impair the most-favored-nation principle. The enumeration and description of acts of discrimination represent a means of protecting our export markets as well as our domestic commerce.

Section 369. This section puts into law administrative practices which were followed prior to the proclamation of GATT. In bilateral agreements concluded under the Trade Agreements Act of 1934, several of these agreements contained provisions that either party could withdraw from the agreement, or modify its terms in the event that a third country became chief beneficiary of a concession contained in such agreements. The bill would establish this desirable administrative practice as a permanent policy objective of the Congress.

Section 370. This section substantially repeats the provisions of existing law concerning escape-clause remedies. It provides however that in instances where injury or threat of injury under the escape-clause provisions has been found to exist, that the President may not disregard such findings but injury or threat of injury shall be deemed to constitute a discrimination against domestic commerce.

Section 371 modifies existing law concerning products having a national defense or national security aspect.

Section 372 provides for "escape" relief, where a product involved has a national defense or security aspect.

Section 373 provides that existing trade agreements shall be reviewed in order to determine whether they conform to the policies and standards expressed in the bill for the conduct of our future reciprocal trade relations with foreign countries.

The section also provides that existing trade agreements shall also be reviewed in order to determine whether concessions made therein have destroyed or adversely modified the duty rate structure established in the Tariff Act of 1930, which recognized and provided for percentage differentials in rates of duty upon (a) a raw material, (b) a semiprocessed article produced in whole or in part from such raw material, or (c) a finished article or product produced by utilizing the semiprocessed item in whole or in part.

Section 374 provides that wherever a recommendation of the board for concessions in duty or modifications of import restrictions be limited to a certain volume, that the President in his negotiations with a foreign country be required to limit such concession to permit imports to be admitted up to an amount equivalent to 5 percent of domestic production of like or directly competitive articles during a specified period of time.

Dr. Morgenthau on Foreign Aid

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent I am extending my remarks to include a letter published in the New York Times of March 7, 1958, from Dr. Hans Morgenthau, Department of Political Science, University of Chicago. Dr. Morgenthau, a former consultant to the State Department, is the director of the Center for the Study of American Foreign Policy at the University of Chicago. His letter follows:

To the EDITOR OF THE NEW YORK TIMES:

Every year when spring approaches the Nation engages in a debate on foreign aid.

The administration tries, as it were, to sell a certain amount of foreign aid to Congress, and Congress refuses to buy that amount. If Congress appropriates much less than the $3.9 billion requested, the President has just told us, we will have "a beleaguered America, her freedoms limited by mounting defense costs and almost alone in a world dominated by international communism."

Congress, unimpressed by such hyperbolic statements, has in the past not been deterred from slashing appropriations for foreign aid. There is little doubt that Congress will not be impressed this time, either.

Responsibility for this sad and dangerous state of affairs lies primarily with the administration, which has not been able to convince the American people that it must have $3.9 billion because it has not presented to the people a rational and intelligible program for foreign aid, because no such program exists.

In the absence of a well-thought-out and coherent aid policy, oriented toward and subordinated to the political objectives of our foreign policy, the administration asks the people to buy a package whose contents they must take on faith.

LINE OF INQUIRY

The question before the administration, Congress and the American people is not whether or not we ought to have a policy of foreign aid. To ask that question is as senseless as to ask whether or not we ought to have a foreign or military policy. Nor does it make sense to limit the inquiry to asking how much money we ought to spend for foreign aid.

The really vital question, which hardly anybody bothers to raise, concerns the kind of policy of foreign aid we ought to have. As it has developed in recent years our policy is fundamentally weak. It has been conceived as a self-sufficient technical enterprise, covering a multitude of disparate objectives and activities, responding haphazardly to all kinds of demands sound and unsound, unrelated or only by accident related to the political purposes of our foreign policy.

Whenever an administration has been able to demonstrate the existence of that relationship, as it did in the cases of the

Marshall Plan and of aid to Greece and Turkey, the people have supported its policy and they did not ask how much it might cost. If the administration knew what it wanted in terms of foreign aid, it would get from Congress what it wants in terms of money.

But by mistaking the methods of the medicine man for those of the statesman it defeats its own policy. For political medicinemanship may work, at least for the time being, in a totalitarian country. But it is the very measure of the vitality of the democratic spirit in America that it does not work, even on a bipartisan basis, with the American people.

SUPPORT FOR PROGRAM

The American people, at least in the long run, seem to prefer statesmanship, however partisan, to medicinemanship, however bipartisan. Their assertion of their critical faculties is a heartening experience. And it renders the more inexcusable the failure of the administration to think hard about foreign aid and to develop a policy which makes sense in terms of the political objectives of the United States, putting such a program before the American people as it is, without frills or tricks. If this were done, the country would support, as in the past, what it is convinced it needs for survival.

The danger is great that if the administration does not change its approach quickly and drastically, foreign aid will share the fate of the League of Nations and for similar reasons: a sound purpose faultily conceived and inadequately presented and hence rejected by the American people. Yet while we had time to recover from the failure to commit our political and military strength to our interests in the interwar period, it is not likely that history will allow us to retrace our steps if we should now fail to support our political objectives throughout the world with our economic strength.

HANS J. MORGENTHAU.

CHICAGO, *February 26, 1958.*

Nonsense About Foreign Aid

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1958

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an editorial from the New York Times, New York, N. Y., on Sunday, March 9, 1958, entitled "Nonsense About Foreign Aid":

Should the American taxpayer give up his hard-earned pennies in order to buy striped pants for Greek undertakers? Should he provide bathtubs for Egyptian camel drivers? Is it right that the sweat of his brow should be expended in order to plant grass along the highways to Lebanon, or to build roads so the King of Saudi Arabia may exercise his expensive imported American motor cars, or to furnish iceboxes for Eskimos?

It is not right, as Director James H. Smith, Jr., of the International Cooperation Administration testified before the House Foreign Affairs Committee. It is not right and it hasn't happened. The ICA did buy shoes for the Greek Army. It did provide facilities for Egyptians, including camel drivers, to fight hookworm by washing their feet. It did help Lebanon plant grass to stop erosion. It built no roads in Saudi Arabia, although it did improve a port and an airfield. It didn't give any iceboxes to Eskimos; they didn't want any.

Mr. Smith shouldn't have had to use up his own time and the time of the House Foreign Affairs Committee in answering this sort of nonsensical rumor. Even those who invented these stories probably didn't believe them. They were intended to fool people. But if the opposition to the $3.9 billion foreign-aid program is so devoid of good arguments that it has to resort to this sort of thing, perhaps we may be hopeful.

It is true that not every penny is expended without error. The pennies we spend on domestic government are not expended without error. But there is no doubt that we get as much out of our foreign-aid program in benefits to our neighbors and in security to ourselves as we do out of any funds appropriated by any governmental agency for any other purpose.

Russia 5 Years After Stalin—Country as Tyrannical and Menacing as When Ruthless Dictator Ruled

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 10, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend and revise my remarks, I wish to include the text of an article by Constantine Brown which appeared in the March 6 issue of the Washington Star. The article, entitled "Russia 5 Years After Stalin," indicated that the basic characteristics of menace and ruthlessness that typified Soviet foreign and domestic policies when Stalin was alive are still just as present today as they were then.

The article follows:

RUSSIA 5 YEARS AFTER STALIN—COUNTRY AS TYRANNICAL AND MENACING AS WHEN RUTHLESS DICTATOR RULED

(By Constantine Brown)

Five years ago Josef Vissarionovich Djugashvili, a Georgian who was known to the world as Josef Stalin, died an apparently natural death in Moscow. For 30 years he had wielded the most despotic power known to mankind since the days of Genghis Khan. He had built the Bolshevik state that emerged from the Russian revolution into a great world power, probably the second most powerful in the world. He had masterminded the spreading of Communist tentacles into nations all over the world.

Cynically, he had used the unstinted support of capitalist nations, which he fully intended ultimately to destroy, to defend his Soviet nation from almost certain conquest at the hands of Hitler's Nazi legions. As soon as the Nazis were destroyed and Hitler was dead, he lost not a moment in double-crossing the Allies who had preserved him and his government.

When the aged dictator died, mourned only publicly by a few men who had survived his purges but by no one else, Stalin held in his steel grip all the formerly independent and proud peoples of Eastern and Central Europe. Most of them never had a chance to resume their old freedoms after World War II; they were "liberated" by Russian armies, and the brutal liberators remained to enforce a Government of Communist puppets of Moscow on each of them in turn. Czechoslovakia, which did have a brief chance for self-determination, was betrayed and captured in a cold and treacherous coup. One nation, Yugoslavia, defied the Stalin grip and somehow made the defiance stick.

The striking economic, industrial, and military successes of the Soviet Union under Stalin were achieved at a frightful cost in human lives, human values, human dignity. Successive bloody purges destroyed even vestiges of independent thought. The men, women, and children of the Russian empire paid in abysamally low living standards for the gains in Soviet heavy industry. Housing, clothing, food, and all the amenities of civilized life were sacrificed forcibly to the grim determination of the dictator to build up Russian industrial potential, and thus to build up the Soviet military machine.

When the Kremlin announced that the great dictator had gone to join the ghosts of the millions he had slain or caused to be slain, for whatever rewards they had ready for him, most of the world breathed a sigh of relief. Surely, the prevailing thought was, things cannot be as bad under his successors as they were under his brutal tyranny.

Now five years have passed, and the monolithic Soviet State remains, as tyrannical, totalitarian and menacing as over. True enough, the battle for the possession of the reins of power did take place, and is still going on. Nikita Khrushchev, on top for the moment, plainly does not feel his power is consolidated enough to enable him to shoot his political foes, as did Stalin. That will probably come later, if Khrushchev wins the final round.

As for the Soviet Union in world affairs, there has been no real change. Seeking time for the carrying out of the power struggle, the Soviets have, to be sure, made a lot of peaceful noises. They have brought forth a deluding bait called "peaceful coexistence" as a carrot to bring a suspicious free world closer to the jaws of the Soviet bear. But the bear's teeth and claws are revealed in moments of crisis, as in Hungary when a once-free people rose in violent rebellion against Red tyranny and were ruthlessly suppressed by Russian tanks and bayonets.

The political ferment inside the limits of the Soviet empire is still bubbing, all the signs indicate. Until the future dictator is firmly in the saddle, Moscow needs a breathing space. That is largely why the Kremlin is so assiduously seeking a summit conference with the West. A period of relaxed international tension would give the men of the Communist inner sanctum a chance to settle which of them is the new Stalin.

Ireland Needs Help

EXTENSION OF REMARKS

OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 6, 1958

Mr. SIEMINSKI. Mr. Speaker, the United Irish Societies of Baltimore—the Ancient Order of Hibernians, Friendly Sons of St. Patrick, the Hibernian Society, and the Emerald Isle Club—are to be commended for launching a program designed to attract new industries to Ireland.

Because so many of my constituents are of Irish heritage, I am even more mindful of the economic struggle that has long confronted the proud people of

Ireland, and the program to locate major industries in that country deserves complete support and understanding on the part of business leaders throughout the Nation.

Ireland has always been and will continue to be a popular tourist center, but American businessmen have been slow to recognize the tremendous potential and actual opportunities which exist there. The available manpower, the excellent facilities, resources, and the friendly and cooperative attitude of Irish officials are but some of the factors that make Ireland ideal, geared to accommodate industries of all types and sizes.

As the program undertaken by the Irish Societies of Baltimore gains impetus, I am sure a growing number of American firms will investigate conditions and become firmly convinced of the fact that Ireland has much to offer.

Pole Veteran Urges War on Impossible

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. BROYHILL. Mr. Speaker, I request permission to insert in the extension of remarks the following article which appeared in the Washington Post on February 23, 1958, pointing out the highlights of a speech given by Dr. Paul A. Siple, South Pole veteran, at a Washington's Birthday banquet of the District Society of the Sons of the American Revolution on Saturday, February 22, as follows:

POLE VETERAN URGES WAR ON IMPOSSIBLE

(By Wendell Bradley, staff reporter)

Paul A. Siple, who spent last winter at the South Pole in a climate colder than modern man had ever lived in, said yesterday that unless this country continues to try the impossible it will deteriorate.

The great question facing the American people, he said, is whether we are capable of solving problems when the chips are down.

Siple spoke at a Washington's Birthday banquet of the District Society of the Sons of the American Revolution.

Siple said the Nation faced almost insurmountable problems in establishing a winter base at the South Pole in connection with the International Geophysical Year. It cost about $1 million per man to put the 18 scientists and Navy personnel there, he said.

"If the time comes when our Nation says a problem is too difficult or solving it is going to cost too much we will lose our place in history because there are others who don't say that," Siple said. He said we will become mentally asleep.

America became great conquering frontiers and has more to conquer, Siple said. He listed them as outer space, the continent of Antarctica, the unknown bottoms of the oceans, and later, perhaps, exploration toward the center of the earth.

Siple and the men under him lived in temperatures of 100 degrees below zero. For 159 days the thermometer never rose above 49 below. Siple said a Defense Department official told him:

"If you just remain alive through the winter we will feel the camp was successful even if you fail to gather any scientific data."

One thing the scientists learned, Siple said, is that the South Pole gets less snow, about 6 inches, in a winter than Washington got in the snowstorm just past.

Edward Asbury O'Neal, III

EXTENSION OF REMARKS
OF
HON. ROBERT E. JONES, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. JONES of Alabama. Mr. Speaker, I want to take this opportunity to bring to the membership of the House the good works and outstanding record of achievement of Edward Asbury O'Neal III, the grand old man of American agriculture who recently passed from our midst. No other farm leader in our time has contributed more than did Ed O'Neal to the development and welfare of American agriculture. We sincerely mourn his passing, and his position of leadership will be most difficult to fill.

As a fitting tribute to the great life and works of Edward O'Neal, I want to place in the RECORD at this time an editorial from the Decatur (Ala.) Daily of March 2 which appropriately describes this leader's great accomplishments:

EDWARD ASBURY O'NEAL III

Books could be written on the life and works of Edward Asbury O'Neal III, grand old man of American agriculture and president of the American Farm Bureau Federation from the dark days of 1932 until his retirement 7 years ago owing to ill health. Mr. O'Neal died Wednesday night at his home in Florence where he had been a semi-invalid since 1954.

Alabama has had no man of greater or more lasting influence on the lives of the American people than "Mr. Ed" O'Neal.

In looking over Mr. O'Neal's life we see him as farmer, architect, sculptor, team member, friend and gentleman.

He loved the land and what it stood for. He loved to talk of his farm, of the strong red valley land, of cotton, corn, oats, and livestock. He went to the top in American agriculture because his foundations were practical, in the land. He was a farmer. He knew farm needs in legislation. He knew what he was talking about and he had the courage, ability and conviction essential to bringing great farm programs into reality. His convictions were based upon the sound economic position of the American farmer, not upon any political considerations or advantages.

In the background he was the architect of Muscle Shoals and he took great personal pride in the development of the Tennessee Valley area. Some feel, and we are among that number, that it was through Mr. O'Neal and his friends and their long years of work that Wilson Dam was possible, the nitrate plant in the first world war, the foundations for the modern TVA. Some feel, and again we are among them, Mr. O'Neal was responsible for the interest of Senator George Norris, of Nebraska, in Wilson Dam and Muscle Shoals and later the TVA.

We knew Mr. O'Neal as the actual author of farm legislation which brought agriculture and the Nation out of the depression years. Those were drastic years calling for drastic changes in legislation and thus was created the AAA, the Bankhead plan, the ever normal granary. Agriculture is still working under the 1938 farm law as amended and many of the amendments since the days of Mr. O'Neal certainly have not had either his thinking or his blessing.

He was the sculptor of the farm bloc, in which the South and the Midwest joined hands for the protection of all agriculture of the Nation. Through the fire and drive that was his coupled with the ability to win, he almost singlehandedly molded the historic farm bloc, which, if it were in existence today, would do away with many of the economic ills which beset the American farmer. Through the thick and thin of many battles the farm bloc stood against all odds. It did not crack, or splinter or yield until Ed O'Neal and the men he developed passed from the stage. Farmers will remember the strength and artistic touch of the sculptor who carved the effective farm bloc.

The great team for agriculture after 1932 was Franklin D. Roosevelt, John H. Bankhead, and Ed O'Neal. The President and the Senator were great ball carriers. "Mr. Ed" called the signals, planned the plays, provided the teamwork strategy. It is common knowledge in Washington that Mr. O'Neal cornered the votes necessary for the passage of this historic farm legislation.

Few people had friends in so many walks of life. The tenant farmer and those of low estate loved "Mr. Ed." He was always kind and had a word of cheer and there was a closeness. This was also true of many leaders in American life who sought his companionship and listened while his mind fought with and analyzed the local, national, and world problems of agriculture. As one north Alabama tenant farmer put it, in his own words of praise for Mr. O'Neal, "He knowed folks across the waters."

We knew "Mr. Ed" as a smiling, kindly, southern gentleman for he knew the chant of the cotton choppers and the feel of the dust on the farm road as it skirted between the field and the thicket, and he knew the cluck of the wagon wheel as it moved to the barn with a load of corn. True to the beloved tradition of the South his life wide and broad, he knew the sassafras bush and the quail and the thrill of a pointer as he froze on point.

Franklin D. Roosevelt and Dwight D. Eisenhower respected his counsel. The tenant farmer and the presidents of the great cotton companies admired and loved his courage and ability. To us all, "Mr. Ed." was a champion.

Resolutions Memorializing Congress Against Certain Legislation Commonly Referred to as Right-to-Work Legislation

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I enclose an attested copy of a resolution adopted by the General Court of Massachusetts, urging "the Congress of the

United States not to enact any legislation relating to the right to work, so called":

THE COMMONWEALTH OF MASSACHUSETTS,
Boston, Mass.

Resolved, That the General Court of Massachusetts respectfully urges the Congress of the United States not to enact any legislation relating to the right-to-work, so-called, or any similar legislation designed to prohibit closed shops or to provide that no employee shall as a condition of his employment be required to join a labor union, which proposed legislation will, if enacted, tend to undermine the strength of labor and of labor unions throughout the country; and be it further

Resolved, That copies of these resolutions be transmitted forthwith by the Secretary of the Commonwealth to the presiding officers of each branch of the Congress of the United States, and to each member thereof from this Commonwealth.

House of representatives, adopted, February 24, 1958.

LAWRENCE R. GROVE,
Clerk.

Senate, adopted in concurrence, February 26, 1958.

IRVING N. HAYDEN,
Clerk.

A true copy.
Attest:

EDWARD J. CRONIN,
Secretary of the Commonwealth.

Lithuanians' Aspirations for Independence of and Freedom in Lithuania

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a copy of resolutions adopted at a mass meeting of Americans of Lithuanian blood and descent of Greater Boston, held at the South Boston High School, Boston, Mass., on March 2, 1958:

Resolutions unanimously adopted at a mass meeting of Lithuanians of Greater Boston held in the auditorium of South Boston High School, South Boston, Mass., on March 2, 1958, and attended by more than 1,000 persons and representatives of the enslaved nations of Lithuania, Latvia, Estonia, and the Ukraine, under the auspices of the American Lithuanian Council of Boston:

"Whereas the Great Congress of Lithuania, which had met in Vilnius in 1917 to demand freedom from Russia, there elected the Council of Lithuania, which, on February 16, 1918, 40 years ago, proclaimed the Independence of Lithuania in accordance with the recognized right of national self-determination and asserted its restitution as an independent state, which status was thereafter recognized by all the great nations of the world, and marked the severance of the ties of bondage by which it has been enslaved since 1795; and

"Whereas the traditional American leadership in principles of justice, morality, and equal rights to all human beings paved the way for American supremacy in political, military, and economic world affairs which this country is today providing for the benefit of mankind; and

"Whereas the Government of the United States of America maintains diplomatic relations with the Governments of the Baltic Nations of Lithuania, Latvia, and Estonia and consistently has refused to recognize their seizure and forced incorporation into the Union of Soviet Socialist Republics; and

"Whereas the mere denial to recognize the Soviet claims of that area, when not accompanied by any positive action on the part of the United States to back its stand, do not and will not bear the slightest effect on leaders of the Soviet Government: Now, therefore, be it

"*Resolved*—

1. That we reassert our faith and loyalty to the President of the United States and to all forces opposing totalitarian rule and oppression,

2. That we unite in appealing to our representatives in Government to exert all efforts to adopte a clear and firm foreign policy such as America's leading role in world affairs necessitates,

That our Government's foreign policy shall include the liberation of Lithuania and other Soviet-enslaved countries as an integral part of its program,

4. That we denounce the Soviet doctrine of coexistence as it would continue the enslavement of heretofore free people in the countries of Lithuania, Latvia, Estonia and all other Soviet-dominated countries,

5. That the President of the United States and the Secretary of State in formulating their presummit discussions with the leaders of the U. S. S. R. now being proposed shall include in their program a full discussion of the liberation of Lithuania and of all other Soviet-dominated nations to the end that all freedom-loving people shall be free,

6. That copies of these resolutions be forwarded to the President of the United States, the Secretary of State, the United Nations, the Senate Foreign Relations Committee, the Members of the Senate and House of Representatives in Congress from this district, the Honorable Foster Furcolo, Governor of the Commonwealth of Massachusetts, and to the Honorable John B. Hynes, mayor of Boston.

K. HOCHING,
Chairman.
T. SONDA,
Secretary.

MARCH 2, 1958.

Why We Can't Enjoy It

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD an editorial that appeared in the Chandler Arizonan of February 27, 1958. This is a most thought-provoking editorial and I thought it should be brought to the attention of the Congress:

WHY CAN'T WE ENJOY IT

It's a bad state of affairs when people can't enjoy improved conditions. One hears grumbling that business is down and that merchandise isn't moving. But both big and little businesses are finding their financial statements at the year's end showing increased sales and profit.

What's happened? Local concerns found 1957 the best year we ever had. And Robert Short, manager of the Mesa Employment Service, reports little change in the unemployment situation here so far this year as compared to a year ago. He also points out that we are in a much better situation than other parts of the country.

Consequently, with this proof to show us that conditions are as good or better than last year, we can't seem to enjoy them. Why? Perhaps it's all in our minds.

Maybe we've just forgotten what it was to hustle for something instead of having things come our way—and that can be taken literally.

Go back to the time before the economy boost of war conditions in 1938 and 1939. You don't have to go back as far as the depression, just to the time a salesman had to sell in order to make a living—and train service was polite and courteous, making a trip pleasurable.

With the labor shortage during the war years, it was not surprising to be confronted with a sales technique of "may I help you, please." So many years we had to guess the car prices which didn't need to be shown then because the demand was so high and the production so limited. Now prices are being printed again and salesmen are traveling many miles to make a sale.

All this is another way of saying it may be a shock that we have to sell once again in order to make a sale and that we may have to extend ourselves beyond the mere exchange of money for services. We may have to take the time and have the patience to be polite and courteous. We may find this difficult with the speed of our time.

With the many demands of our complex living, we may never be able to slow up sufficiently to regain the intimate relations of doing business, for example, with the family doctor who takes care of all our ills instead of being referred to specialists.

All this may be a malady of the tenor of our times, but it surely is too bad we can't enjoy prosperity.

Linguists in Short Supply in United States—Training in Foreign Language Should Begin at Early Age

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. PRICE. Mr. Speaker, in a time when communications and exchange of ideas among nations is of critical importance, we are discovering that we are in short supply of the instruments of such interchange—persons fluent in foreign language.

I have recently seen a report that only 8,000 Americans are proficient in Russian, a language that is essential, for example, in the translation of many significant scientific reports. The Armed Forces are aware of this need for linguistic skill in a wide range of foreign tongues and are conducting schools for this purpose. At the college level, a great number of our students who go abroad to visit or study lack ability in foreign languages—a gap which makes their experience less rewarding.

While this condition prevails, educators tell us that youngsters in the elementary grades are at a ripe age for learning another language in addition to English. The time is within memory, I am sure, of many Members of Congress when elementary schools in their areas taught a foreign language because of the large number of foreign-born parents who wanted their children to understand their ancestral language.

In one of the cities in my district, Belleville, Ill., youngsters were taught German for this reason in the public schools. But in the emotional fervor of World War I, German was dropped from the schools, never to return. In my home city of East St. Louis, Polish is still taught to children at St. Adalbert's parish school. This program of early training in languages has much to commend it. I wish to insert the following editorial on this subject which appeared in the Belleville News-Democrat on March 6, 1958:

BELLEVILLE PROVED IT LONG AGO

When does a baby start learning to talk? He isn't many months old when he starts babbling gibberish syllables, perhaps in imitation of the meaningless (to him) sounds he hears constantly issuing from the mouths of adults. This is the beginning.

A little later, awed parents hear him utter his first monosyllable. Then he begins to show that he understands the meaning of some words. By the age of two the average child is beginning to achieve a little fluency in using speech as a means of communication.

Modern educators reason that if a 2-year-old can learn a language, the task should not be beyond the powers of a 9-year-old. But many individuals have expressed doubts about this. Fourth graders, they say, are entirely too young to learn French. Yet French children learn it much younger.

In the E. Francis Medill elementary school in Newark, N. J., where an experiment is now going on, fourth graders are learning French and Spanish, and enjoying it. They have acquired the knack of carrying on conversations in a foreign tongue and singing songs in it.

The Newark experiment is hailed in educational circles as something excitingly new and revolutionary. Here in Belleville it's "old hat." For many years the German language was taught in all Belleville grade schools, both public and parochial, along with and as compulsory as English. German, however, was discontinued during World War I as unpatriotic, and afterward never resumed.

Belleville children were introduced to this modern foreign language in the first grade at the tender age of 6, and indoctrination continued through the eighth grade. However, German was never really regarded as a foreign language here since German immigrants and their descendants predominated in the community. And the German language, of one dialect or another, was preferred over English in many homes and churches.

That German teaching was dropped in the first place was lamentable; that it was never resumed, inexcusable. Now, 40 years later, our Nation is finally waking up with a start to the lag in foreign language education. President Eisenhower has told Congress that the American people are generally deficient in foreign languages and that to overcome this is important to our national security.

In a list of 36 countries compiled accordinf to the number of years of foreign language teaching in their public schools, the United States ranks lowest. Foreign languages are compulsory in most of these countries' schools. In the United States students generally may choose. Most choose not to study any.

As a result of this belated reexamination, a crash program is being readied by the Department of Health, Education, and Welfare to correct the situation. And so we begin to rouse from our lethargy of complacency. But it takes almost a crisis to get us back on the ball.

Washington Report by Hon. Bruce Alger, of Texas

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include my weekly newsletter of March 8, 1958:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District of Texas)

MARCH 8, 1958.—The Treasury, Post Office, and Tax Court apppropriation bill involved $23,600 million (this equals $23 per minute since Christ was born), the year's second biggest money bill, next to defense. Of this $8½ billion was permanent indefinite appropriations (mainly $7.8 billion interest on our national debt). Nor could we cut the $11 billion representing trust funds ($8 billion old-age and survivors payments, $2 billion for payments to unemployed, and 13 others). This left $4 billion for Congress to consider. The Post Office got $3.4 billion, which is $77 million more than last year and $19 million less than requested. The Treasury Department actually asked for $200,000 less than last year, an action almost unheard of in Government agencies, and the new Secretary of the Treasury drew some compliments. So it can be done. Hats off to Secretary Bob Anderson.

H. R. 8002, the accrued expenditure bill, is one of the Hoover Commission's legislative recommendations, aimed at economizing in Government. It passed after spirited debate. Under an accrued expenditure system, Congress would appropriate only as much money each year as the agencies would actually pay out during the year. It would replace the present system under which Congress authorizes agencies to incur financial obligations for years ahead by ordering goods or services and then drawing on the Treasury to pay for them as delivered, even though payments may be made for years after the appropriation was originally made. Enactment of this type of legislation will result in much improved control over Government expenditures and permit substantial savings, it seems to me. Obviously, lead time required between placing of military orders and delivery date will be recognized and necessary adjustments made so contractors will be assured of getting their money. Opposition came, surprisingly enough, from senior members of the Appropriations Committee, claiming the bill would fail to limit expenditures. This I cannot believe. This bill fits the pattern of the constitutional amendment I support which would compell Congress to balance the budget yearly.

Widespread citizen support has forced Congress to consider this bill now, pointing out for all to see what an aroused citizenry can do. Why don't citizens everywhere rise up and demand fiscal responsibility and cutbacks from Congress in other legislation? Why permit an increasing budget in welfare and social programs in the face of slackening business? Increased Government spending now to increase employment is like using gasoline to put out the fire. A sure way to stimulate the economy is through a tax cut. This in turn is practical only if Government expenditures are cut; otherwise, inflation, the most dangerous tax, results.

Nationwide farm facts we all should know: (1) Per capita farm income in 1957 was highest in history; (2) farm assets are at an alltime high,, and home equities are up; (3) two-thirds of the farms are free of mortgage; (4) three-fourths of farms are operated by owners; (5) sale prices of farms are high, with ready buyers; (6) present programs will tend to free farmers rather than tighten controls on them. Help for the farmer, as I see it, will not come from more Government regulations, only from less, and ultimately from no Government regulation. All taxpayers should commend Secretary Benson's efforts to free farmers from further Government stangulation.

Trade, not aid is more than a slogan to many Members who are disillusioned with self-defeating foreign aid. What's at stake in foreign trade? More than 4½ million American workers are estimated to work in industries dependent wholly or to a large degree upon foreign trade. In 1957, the United States exported about $19½ billion worth of goods to all parts of the world. These goods were sold for dollars and were exclusive of all military aid. Imports in 1957 were measured at about $13 billion, $11 billion of which comprised materials and partially processed goods completely noncompetitive with domestic production. The balance, therefore, shows $30½ billion in trade which benefits every American and $3 billion that offers competition to some segments of our economy. (Here's the rub—Congress must protect domestic industries—including Texas' defense-vital oil production industry.)

While Capitol Building expansion might be disapproved by some on economy grounds, including myself, yet it should be remembered that the Capitol has been added to many times, and such additions are hardly improper in themselves. As the gloom and doomers point to rising unemployment figures (and some politicians are going to be awfully disappointed if things don't really get bad) maybe its time somebody pointed out the amazing rise in folks who are working. Take Dallas County—according to the Department of Labor, the number of people employed has soared from 268,100 in April of 1950 and 311,300 in July of 1954 to a whopping 348,300 in January 1958. That's a 30-percent increase in the number who are employed in less than 8 years.

Government Operations and Policies

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. CRETELLA. Mr. Speaker, from time to time I receive correspondence from Mr. A. Bryan Clark, president of Associated Seed Growers, Inc., of New Haven, Conn. Mr. Clark often offers interesting and intelligent insight into many of the current problems facing our

Government and I look forward to his correspondence.

I should like to include herewith a letter of his, dated March 4, 1958, which I believe is presented with the utmost clarity and commonsense. He touches on some important facets of our Government operations and policies. I am pleased and honored to include this note for the reading of all Members of this body:

ASSOCIATED SEED GROWERS, INC.,
New Haven, Conn., March 4, 1958.

Hon. ALBERT W. CRETELLA,
Member of House of Representatives,
House Office Building,
Washington, D. C.

DEAR MR. CRETELLA: The problem of deciding how much money the Federal Government should spend and for what, is as staggering as it is important. My crystal ball is not better than the next fellow's, and not as good as yours with some of the source of information available to you. Many decisions of far-reaching consequences, however will have to be made by you and your colleagues in Congress during the coming months relating to this problem, and for this reason I would like to express to you some of my hopes and concerns, and perhaps my prejudices and preferences in this field.

The great majority of us, I am sure, would prefer to see questions of this type determined more than they have been in the past on the basis of the common good of the Nation and the world and less on the basis of the special interests or organized and local minorities. Basically, I side with those who are concerned about the vast total of the sums being raised and spent by the Federal Government. Agreement is pretty general on this point, I guess, with the differences of opinion coming about the point at which the expenditures should be reduced.

The demands of national defense are no doubt paramount, and I agree that they should be given priority, but that they should be weighed carefully in relationship to the fundamental strength and vitality of the national economy, which in itself is a major pillar of defense. The astute support of military and economic effort abroad on the part of our natural allies and potential allies is also, in my opinion, highly important and appropriately viewed as part of our defense effort. In fact, it is probably an unsound concept to think of our most important responsibility as a matter of defense. We are engaged in what we all regard as a life and death contention with a hostile view of the proper mode of life and way of conducting world affairs. Accordingly, our prime responsibility and the chief interest of the Federal Government is not defense in a passive or negative sense. It is rather our aim at a Nation to generate and foster worldwide development in a direction that will permit the institutions and practiecs of liberty and democracy to function and to flourish. The ultimate success of this mission is the only condition on which we can maintain an ultimately successful defense.

Within the limits of our economic and financial capacity, then, the needs of our national defense and of our world mission, which are simply different facets of a common project, deserve first priority.

The other activities of the Federal Government seem to me to be distinctly secondary. Many of them are obviously important and necessary, but hardly, it seems to me, deserving of the enormous sums expended on most of them.

Much that is attempted by the Federal Government I feel can adequately, if not preferably, be handled by State and local governments and this includes matters of education. New needs and a new sense of direction may well be called for in this field, but that is largely a matter of judgment and common conviction. Given a sound sense of direction it can as well be followed by local governments as by the Federal Government, if the economic health of the Nation is protected by the Federal Government, and sources of revenue are relinquished and made available to the States and localities.

In the field of agriculture, to my mind, great damage has been done rather than great good performed by the expenditure of vast sums as subsidies in various forms to the agricultural communities. For the most part the largess has not gone to neediest parts of the farm population, but rather to the most astute speculators or the largest and most efficient agricultural producers and operators. At a time when financial solvency is a great national peril, it sems to me to be plain asininity for the Federal Government to be spending great sums on reclamation projects to bring new acreage into production to compete with and to displace the acreage now in production under prior reclamation projects, and at the same time to be spending other great sums to subsidize the taking of agricultural acreage out of production. In the process the Government subsidy program handicaps the advance of agricultural technology and fosters such things as production of varieties of maximum yield for Government purchase and storage as against the production of varieties of better commercial quality for use and human consumption. The perpetuation of the inequities and iniquities of these conflicting farm policies, which even in total are for the benefit of such small and favored groups even of the total farm segment of the population, is hard to understand.

Lastly, it is hard for me to understand why cooperatives, even when organized by 4 or 5 or 6 individuals for the conduct of a business operation, should be accorded tax exemption or tax favoritism when the tax burden today is the largest and most crushing business consideration of any. The Government needs tax revenues. The health of the economy needs fair competition. The ordinary business corporation has to pay taxes on its earnings and its stockholders are required to pay a second tax on their dividends. Why is it that cooperative business organizations continue to be exempt at this advanced stage of their economic development from equal taxation with the rest of the community?

I have followed your efforts and actions as a public figure, and I thoroughly appreciate the fact that your views coincide with mine on many, if not most, of these points expressed above. For this reason, I am writing more to reinforce these points of view and your judgment on them than to take issue with your particular stand on these questions. I have great respect for what you have done and for what you are trying to do in the present session of Congress.

Sincerely yours,

A. BRYAN CLARK,
President.

Our National Guard

EXTENSION OF REMARKS
OF
HON. W. R. HULL, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. HULL. Mr. Speaker, in a statement before the Armed Services Committee of the House of Representatives on March 3, the Honorable James T. Blair, Jr., Governor of Missouri made a significant statement regarding a recent recommendation handed down by Pentagon officialdom.

The National Guard, to which this Pentagon recommendation relates, has served our Nation well in war and peace. During the last world war, the caliber of National Guard divisions was rated very highly by our enemies, the Germans and the Japanese. National Guard divisions likewise were called into service at the outbreak of the Korean war and performed nobly during that conflict. In times of internal disaster, the Guard has always responded quickly and effectively to the call.

Governor Blair delineates in cogent fashion the unique importance to Missouri of its National Guard forces and his statement comprises a convincing argument against weakening of our National Guard in this perilous age.

Under leave to extend my remarks in the RECORD, I include the full statement of Governor Blair:

Mr. Chairman and members of the committee, I appear before you today in a threefold capacity: As the Governor of the State of Missouri and commander in chief of its military forces; as a member of a select group of State chief executives; and as an individual American citizen.

I am here because, in each of those capacities, I share with my colleagues a keen interest in the security of the United States, and, in particular, in the Army National Guard as an integral part of the first line of defense of this Nation.

The long and proud history of the National Guard is convincing evidence of its volunteer contribution to the development and security of our country. In its dual status, unique in our governmental system, it serves the States in time of peace and provides the Republic with a Ready Reserve force for defense in time of war. We Missourians are exceedingly proud of our National Guard, both Army and Air, and of the service rendered to the State in times of disaster and to the Nation in combat. In my opinion, Pentagon planners are prone to treat the National Guard only from an aspect of the Federal Government, while discounting its value to the States. Our presence here today is overwhelming evidence and proof of the importance we attach to any program which would unfavorably affect the guard. I am seriously concerned with the apparent attempt in certain quarters to downgrade our existing conventional forces. While I favor the increased emphasis being placed upon the development of ultimate weapons and programs designed to reinforce our country's scientific and technical leadership, it is my firm opinion that our military posture must not be weakened by further decrease of our Reserve force.

For some time, we have been engaged in the dubious procedure of reducing the strength of the active Armed Forces. Now, the national budget for fiscal year 1959 would decrease the only effective Ready Reserve force available to the Army—the Army National Guard—by 40,000 officers and men.

Concurrently, reports have reached me that the Army has developed a revised troop basis for the Army National Guard which proposes to eliminate six divisions and many hundreds of nondivisional units.

Such actions can only be ascribed to our retarded entry into the space satellite arena and the consequential hysteria which would have us place all of our eggs in the "missile basket" at the expense of our Active and Reserve Ground Forces. Moreover, we cannot dispel the thought that the current situation provides an excellent cover for those

whose continuing aim has been to downgrade the Army National Guard and relegate it to a secondary and minor role.

The fact that plans to materially reduce the number of units in the Army National Guard have been developed in an air of secrecy and under the cloak of security classification is most disturbing. Such action effectively precludes any attention on my part to illustrate for you the actual losses in strength and organizations which would confront us in Missouri in the event of their approval. I am aware, however, that distinguished and competent officers of the National Guard already have appeared before this body and that they have furnished you with specific information applicable to these matters.

I have always considered the National Guard in the nature of a joint venture between the Federal Government and the States. As a matter of fact, this arrangement envisaged and provided for by our forefathers is as old as our country. As in any such system, both parties share a part of the burdens, and to both mutual advantages should flow from the common enterprise. When changes or modifications are required in this type of partnership, the necessary plans should be developed through mutual participation and cooperation. Apparently the Department of the Army does not view the guard in this light and intends to present Missouri and the other States with a finalized and completed blueprint on a take-it-or-leave-it basis. This is in contravention of existing Federal statutes which provide that changes of this nature in troop branch and allotment may not be effected without the consent of the governor of the jurisdiction concerned.

As the Governor of the State of Missouri, the National Guard is more to me than mere numbers of bodies and rosters of units; it is a living, vibrant organization made up of individuals who have volunteered above and beyond the obligation of Federal requirements and have placed themselves at the disposal of their State. It is a vested part of the community life of my State; it provides full-time and part-time employment for our citizens; it supports civic activities; it assists in preserving order, and it provides excellent training and discipline for our young men. In addition, it is a definite economic force in the smaller towns and communities which cannot be discounted.

In the State of Missouri, we have 801 officers and 7,051 men in our Army National Guard. This force is organized into 112 units and dispersed throughout 60 communities. We have a tremendous investment in State-owned armories and other facilities, together with hundreds of thousands of dollars invested in a joint State-Federal constructed installations. We have a competent State military headquarters engaged in the control and direction of this military force. The problems confronting the Missouri Army National Guard are our day-to-day concern. It would take vitally important and cogent reasons to convince us of the wisdom of any plan designed to cast adrift our guardsmen, eliminate our units, and charge off our investment. From any standpoint, military or economic, Federal or State, such a course cannot be supported by valid arguments.

It is my understanding that the present attack on the guard is twofold. It consists on the one hand of an attempt to reduce 40,000 members, nationwide, by means of reducing appropriations in the national budget for fiscal year 1959. Concurrently, and from another quarter, is the proposed plan to eliminate six divisions and over a thousand additional nondivisional units. I stand solid against either action. I am opposed to any reduction which would decrease the number of volunteer citizen soldiers, and I am equally opposed to any plan that arbitrarily directs the destruction of organized units. Rather, it appears to me to be a far wiser course to accelerate the conversion of the units and organizations of the Army National Guard into the Pentomic structure. This should be accomplished within the present framework of the guard and designed to take maximum advantage of existing personnel, equipment, and facilities. Missouri does not wish to maintain units which do not meet the requirements of support desired by the Army, neither do we wish to destroy the handiwork of years by the stroke of a Pentagon pencil.

I am aware that this Committee and the Congress at large has ever been a refuge of the National Guard when hundreds have sought its destruction for the purpose of concentrating military power in the Pentagon. Today the Army National Guard constitutes the largest and most effective ready Reserve force available to the Army. This is adequate evidence of the past wisdom and foresight of the Congress. On you rests the present responsibility of preserving this force and enabling it to perform its historic role for the country. I know that this responsibility is in good hands.

Editorials Concerning Agriculture From the Falls City Journal

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. WEAVER. Mr. Speaker, we have a number of fine daily and weekly newspapers in Nebraska, the majority of which are locally owned and operated. The people who run these papers are an important part of the community itself and, as a general rule, they quite accurately reflect the thinking of the home folks. My hometown of Falls City, Nebr., in the heart of our agricultural area, has a newspaper of which all Falls Citians are proud. It is staffed by local people who know our problems and understand them. I am pleased to include herewith two recent editorials from the Falls City Journal concerning agriculture which I commend to every Member of this House for reading:

Congress and the administration are moving to offset the economic slide with various pump priming projects, moves to inject new money, the lifeblood of prosperity, into the ailing economy system. We hope that the agencies of Government will not overlook a major factor in the slump—the sick agricultural industry. In the years leading up to the economic storm which began a devastating movement through the country and grew into the massive depression of the 1930's, the agricultural industry was the first to feel the blow. Today, many claim that the trouble in the agricultural economy, the loss of rural buying power, actually caused the slump which snowballed from that point into a major depression. Is the agricultural slump again leading the way into a major depression? We hope not. But let's not wake up to the fact 20 years from now and find out at that late date that the agricultural depression of the middle 1950's again triggered a severe depression national in scope. Let's bolster the agricultural economy, restore the buying power of the farm, before it is too late again. The farmer is not as big a figure in the national statistics today as he once was but when he's well and healthy financially, he still is a most important customer of basic industries and when he can barely meet fixed expenses and living costs, it means trouble in thousands of mills and factories over the country.

A week or so ago, nine wheat-belt Republican Senators called on Secretary of Agriculture Benson to peg wheat prices at $2. Yesterday, a group of 30 Republican Congressmen sent a delegation to the Secretary of Agriculture to urge upon him a shift in farm policies. But the Secretary of Agriculture was adamant. He plans to continue his present policies. He figures there's no cure for his patient, so he's going to let sick American agriculture get well or die by itself. Mr. Benson has apparently adopted the policy that, since the current practices of supporting farm prices and attempting acreage controls haven't worked perfectly, they should be junked. His philosophy makes about as much sense as for a man to junk his old automobile because it doesn't work perfectly before he has a better replacement within reach. Nearly everyone knows, as Mr. Benson does, that the sup orts and the controls of the last 10 years or so haven't worked perfectly. But, on the other hand, we cannot afford to scrap this help to agriculture until we provide a better crutch for it to lean on.

Statement of the Honorable Sinclair Weeks

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of the honorable Sinclair Weeks, Secretary of Commerce, before the Committee on Ways and Means, House of Representatives, Monday, February 17, 1958, 10 a. m.:

Mr. Chairman, I am here to urge legislation to make jobs and to protect jobs, the jobs of more than 4½ million American workers whose livelihood is provided by world trade.

I have come before the committee to urge favorable consideration of H. R. 10368, introduced by Chairman MILLS, and its companion measures introduced by Congressmen KEAN, FRELINGHUYSEN, and CHAMBERLAIN, which would amend and extend present trade agreements legislation. The purpose of this bill in general is to extend for a period of 5 years the President's authority to enter into trade agreements with other countries, and to give the President certain additional authority to reduce United States tariff rates in return for reciprocal concessions by foreign countries.

The trade-agreements program, given its close and direct relationship to our economic welfare and national security, by its very nature deserves bipartisan support. The President in his message to Congress on January 30, urged adoption of this legislation and said:

"The enactment of this legislation—unweakened by amendments of a kind that would impair its effectiveness, is essential to our national economic interest, to our security, and to our foreign relations."

I am here to tell you how all of this affects our economy, but I warn you that the Soviet Union's new global economic drive

puts to hazard our favorable trade posture, menaces free world unity and jeopardizes the foundation of peace.

These ominous new factors introduce logical grounds for those with previous doubts about reciprocal trade to reexamine their position. Even more, these developments provide impelling reasons for everyone—in sheer self-interest, in security—to consider extension as a means of strengthening that security.

It's either more trade or more trouble.

If these conclusions are correct and if this legislation is good for the country, it should be adopted by the Congress. Because I thoroughly and completely believe the legislation is not only good for the country but essential in the national interest, I am here to open the discussion and present the evidence.

COMMERCE DEPARTMENT RESPONSIBILITIES IN TRADE

Let me first point out that the responsibilities of the Secretary of Commerce, as set forth in the statute, are to foster, promote, and develop the foreign and domestic commerce of the United States. Obviously in doing this the needs of all segments of American business and industry must be taken into consideration.

All segments include both those who produce for export and those who have little or no interest in foreign markets. It includes those who depend heavily on imported commodities and those whose goods must compete with imports in the United States markets. It includes all who process, transport, and distribute our exports and our imports, as well as those with a vital stake in our overseas investments. I spell it out in this manner to make clear that in formulating the judgments which I am communicating to you, I have, I think, considered the interests of all sectors of American business.

With world trade an ever-more important part of our economic life, the Department of Commerce is playing an increasingly significant role in the formulation of our foreign trade policies. Recently the President strengthened Commerce's role in trade agreement matters and in foreign economic questions generally by creating a Cabinet-level Trade Policy Committee, chaired by the Secretary of Commerce.

This committee, already in operation, directly advises the President in the administration of the trade agreements program. The recommendations made to the President by this committee, under commerce leadership, will include action in escape clause cases. It will guide the direction of GATT negotiations and it will be consulted on the proposed composition and membership of the delegation to the GATT. The committee will review and advise the President upon all recommendations of the interdepartmental Trade Agreements Committee, and will be consulted in all other situations that influence this country's posture in world trade. Creation of the Trade Policy Committee reflects the fact that our domestic economic situation is receiving due weight when decisions on international questions are taken.

The very fact that the Secretary of Commerce has been asked by the President to present to the Congress the administration's trade proposals reveals the increasing responsibilities in this field of the department with wide experience and understanding of the problems of private industry.

RECORD HIGH LEVEL OF TRADE

Let me first say a few words about the increasingly high level of our total trade, which reached a record high in 1957, and the relationship of our trade picture to other important segments of our economy.

First. Exports of manufactured products, raw materials, and foodstuffs in 1957 (exclusive of military aid) reached the staggering total of $19½ billion approximately the highest in our Nation's history.

During the same year, imports in the same categories totaled $13 billion approximately.

A recital of figures of this magnitude must immediately convince anyone of the great importance of this trade to our economy as a whole.

Second. Foreign trade provides the livelihood for at least 4½ million American workers, or about 7 percent of our labor force. This figure includes those engaged directly or indirectly in production or service for export, or in the distribution of imports, or in the first factory processing of imported materials.

Our exports of goods and services currently represent about 6 percent of the Nation's output. The value of United States goods marketed abroad in 1956 exceeded the value of:

All consumer purchases of automobiles, parts, and accessories; or

All residential nonfarm construction; or

All consumer purchases of furniture and household equipment.

Around 9 percent of our entire output of movable goods was exported in 1956. For example, we exported: 11 percent of our machine tools, 19 percent of our production of trucks, 26 percent of our construction and mining equipment.

I am giving you examples from the field of manufactured products in which I have special responsibilities.

My understanding is that later Secretary Benson will give this committee examples of even higher export percentages for agricultural commodities.

RECIPROCAL TRADE AGREEMENTS ROLE IN TRADE

A recital of trade developments leads me to the part which the reciprocal trade agreements program has played, in my estimation, a significant, and constantly increasing role.

In a real sense, however, an examination of developments during the past 5 years or so is the first opportunity we have had to really judge the program and the trend. Before this, World War II, with its aftermath, and the Korean war had so distorted world trade, had so increased the need of many countries for imports, and so reduced their ability to export, that the effects of reciprocal duty reductions were temporarily overshadowed during this period.

By looking at the last 5 years when economic conditions have become more normal in most countries, we can see better what has happened during a period when tariff rates have again become an important factor in trade. In this way we can form some idea of the worth of a program under which we and all our important trading partners have reciprocally lowered many duties.

Let me first present to you a chart in which we have compared, under the heading of "Exports and Imports of Finished Manufactures in Constant 1956 Dollars," the trend of exports and dutiable imports. The export total has been arrived at by subtracting the total value of our foreign-aid grants.

The really significant factor to be noted is the tremendous increase of our exports of finished manufactures in the last 5-year period as contrasted in this particular field with a relatively small increase in dutiable imports of the same category of goods.

TRENDS IN PARTICULAR COMMODITIES

In somewhat more detail let me now refer to several charts depicting trends of the last 5 years in exports and imports of particular types of commodities. For this purpose, I am choosing examples from industries whose products are both exported and imported on a significant scale. I am including several industries whose spokesmen have been known to complain publicly about competitive imports, even though their products are exported in much larger volume than they are imported.

As I look at the figures I wonder if such spokesmen are bearing in mind the stake which their own industries have in the maintenance of export markets, and if they realize how much they themselves might risk should the United States follow short-sighted policies leading to shrinkage of our markets abroad.

Let us look, for example, at our chemical trade. In 1953, we exported about $900 million worth of chemicals and allied products and imported some $450 million worth. Our exports of chemicals have risen steadily, and by 1957 totaled $1½ billion, roughly 70 percent above the 1953 level. Our imports, on the other hand, have remained at or below the 1953 level throughout this period.

This does not strike me as the record of an industry in dire jeopardy from import competition. Rather, it suggests an industry with a vital stake in keeping as clear as possible its channels to export markets.

One of the most important single classes of United States exports is industrial and business machinery. Such exports have risen from about $1.7 billion in 1953 to more than $2.6 billion in 1957. Imports of industrial machinery, although acquiring some consequence in the past decade, have risen much less since 1953, from $150 million to $280 million a year.

Similarly, while imports of iron and steel-mill products have held steady at roughly $200 million both in 1953 and 1957, over the same span, exports of steel products approximately doubled—moving from about $560 million to more than $1,100 million.

For several decades, the automobile industry has been one of our major exporters. Much attention has recently been attracted, therefore, by the rise of foreign passenger cars in our import trade, from slightly more than $50 million in 1953 to well over $300 million in 1957. What has not been so widely noticed is that United States exports of autos, parts, and accessories have risen over the same period by an even larger amount, from just under $1 billion to nearly $1.3 billion. As in the other cases just cited, this two-way exchange reflects primarily a high degree of industrial specialization from which both we and our trading partners realize substantial gains.

Still another industry in which our exports have grown rapidly is paper manufacturing. Exports of paper and paper products have risen by more than 60 percent since 1953. To be sure, our imports of paper and paper manufactures (exclusive of newsprint, for which we rely chiefly on foreign supplies) have risen by a similar percentage, but they remain less than one-third as large as corresponding exports.

Now let me turn to cotton textiles, where the trade picture does not look as good as some of the others. Imports of cotton manufactures doubled from $75 million in 1953 to $154 million in 1956, and amounted to about $135 million last year. Over the same interval, exports of cotton manufactures have declined somewhat, from $272 million in 1953 to about $250 million in 1957. But we should not lose sight of the overall picture, in which United States cotton textile exports remain nearly twice as large as imports.

Imports represent a quite small proportion of our total consumption of cotton textiles. Figures showing the ratio of imports to domestic production are not available for cotton manufactures as a whole, but there are some data for particular sectors. In the case of cotton broad woven fabrics, an important segment, foreign supplies were probably not over 2 percent of domestic production in 1957. For the textile mill product and apparel industries as a whole, including cotton and other materials, it is

estimated that imports amounted to 3 to 3½ percent of our domestic production.

Finally, in this connection, I would remind you of our recent efforts in bringing to the attention of the Japanese the implications of the very rapid rise in United States imports of cotton textiles which was underway a few years ago. The Japanese decided to limit their exports of such products to us, and I believe that this voluntary action on the part of Japan has worked well in the interests of both countries.

In a world as complex as ours, in which a variety of factors affect trade, it is difficult to isolate the effects on trade of any one influence. It is clear that many things in addition to the reciprocal trade agreements program have played a part in these favorable developments which I have described. But while it would be incorrect to attribute these advances solely to the reciprocal trade agreements program, it is downright wrong to condemn a program under which such spectacular strides have been achieved. We may not be able to measure precisely the part played by the program in expanding our exports, but these were the rules under which the game was played while our trade was making such outstanding progress. In the light of the results how can one say the rules are bad?

FREE TRADERS AND PROTECTIONISTS

It seems to me that thoughtful people cannot fail to be impressed by the trading history of recent years. Certainly these developments have influenced my own thinking and taken in conjunction with other cardinal facts in today's world—the Soviet threat, the compelling need for free world unity in the fact of that threat, and the creation of economic entities such as the European common market—they are compelling arguments for continuing the program.

Don't infer from this that I've become a free-trader; I'm no more a free-trader than I am a hardshell protectionist. Basically, I consider myself a moderate, and I feel that the bill under consideration is one a moderate can wholeheartedly support.

Mr. Chairman, I say categorically to the committee what I have said many times before, that there is nothing to be gained in this picture by having free-traders and protectionists screaming imprecations at each other. If either side wins the battle outright, both sides will lose it; and the only possible thing that can be done today in this country is to exhibit a little give and take and approach this trade problem in a moderate manner, to the end that we may build for the future on a solid foundation.

A basic reason we are anxious to export is that by exporting we earn the means to pay for our imports. The same reason is equally applicable to our trading partners. They want and need to obtain from us a wide range of goods, usually because our products are better, or more readily available, or cheaper. In order to buy, however, they must earn the wherewithal to cover their purchases, and that it why they consider it so vital to sell their goods and services to us. If we do not buy from them, they cannot buy from us. If they could not buy from us the goods they need, they would have to find substitute sources, while our own efficient export industries, cut off from their important overseas markets, would experience great difficulties because they had lost their customers.

Our exporting industries are, as I have described, very important; any difficulties they might experience would have noticeable repercussions throughout the entire economy.

We think a great deal in this country about protection. However, as we give a measure of protection against hurtful foreign competition we had better begin to think of affording a measure of protection to our vitally important export trade as well.

There are those who profess to see no connection between our imports and our exports, who say we could continue to sell even though we refuse to buy. I think they are wrong. A private citizen who cannot sell his products soon has to reduce his own purchases. In the same manner, a nation which cannot find export markets for its own products must soon cut down on its purchases even thought the products purchased play a vital role in its economic life. Nor can our future trade be limited to what foreigners can earn by selling us wholly noncompetitive products, such as coffee or bananas.

EUROPEAN COMMON MARKET

The objective of this bill is to reduce obstacles to our exports and imports and thereby encourage international trade and heightened economic activity in our industries which depend directly or indirectly on trade. A recent development abroad illustrates very well the importance of our following consistent, forward looking trading policies in our own economic self-interest. I refer to the creation at the beginning of this year of the European Economic Community—the so-called European Common Market. Here six European countries, with a combined population almost equal to ours and a combined national product about one-third of our own, are in process of forming a new economic grouping.

When the common market is ultimately achieved, in 12 to 15 years, all duties on the internal flow of goods within this community will have been eliminated. Beginning in about 4 years the participants will take the first steps to apply a common customs tariff to the outside world, including the United States. If the common market works as planned, the participating countries will ultimately enjoy a higher standard of living than they would otherwise have been able to attain. They will reach these higher living standards only if industry and agriculture in the common market countries become more efficient and more productive—more competitive, if you will.

A Europe where economic activity is heightened, where more goods and services are being produced and consumed, will clearly offer greater trading opportunities to United States business. We need only look at what has happened to our exports to these same 6 countries during recent years, when European economic recovery made such remarkable strides, to get an idea of the close connection between economic activity abroad and the levels of our trade. During 1953 our exports to these 6 countries totalled $1.5 billion; in 1957 we exported to them $3.2 billion worth of goods.

The extent to which we can benefit from these enlarged opportunities will depend upon the tariff rates ultimately adopted by the European Economic Community. The Community stands ready to adjust individual rates in return for reciprocal concessions by its trading partners. To my mind, it is extremely desirable for the President to have authority in this field which will enable us to maintain and expand our export markets in this vitally important area of the world. The countries of the European Common Market will be developing their uniform tariff over the next 5 years and will be placing it in effect at the close of that time. A 5-year extension of the Trade Agreements Act, as provided in H. R. 10368, will give the President needed authority and flexibility to negotiate throughout this important period.

In the words of the President, himself, "Such an extension with the tariff reduction authority to be requested is necessary to carry the trade-agreements program through the early formative years of [this] European economic community and strengthen our ability to further vital American interests there and elsewhere in the world." It is obvious that the crucial period in determining future trade patters will occur during the next 5 years. It will be tragic if American industry is penalized by appearance of indecision which most certainly will result from a prospective change in trade policy during the 5-year period.

At the same time, the United Kingdom and most other western European countries not in the community are considering ways to associate themselves with the common market to form a still wider free-trade area. If this endeavor succeeds, our need for adequate powers in this field will be even more urgent.

SAFEGUARDS TO AMERICAN INDUSTRY

I have been stressing the general desirability of an expanded foreign trade, and our need in this connection for the authority conferred by this legislation. I want to stress equally my belief that when we work for increased trade we have a clear duty to see to it that we do not grant tariff reductions which cause serious injury to individual segments of American business. I believe the safeguards contained in the present legislation, as reinforced by H. R. 10368, fully meet this essential need. It is because I am on the one hand convinced of the desirability of expanded trade, and on the other of the adequacy of the safeguards against serious injury to United States business, that I am prepared to support this legislation so unequivocally.

I would like now to review the actions taken by the President to date in escape-clause cases. Since the provision was written into the law, the President has made escape-clause decisions on 23 commodities. Of the 23 commodities in question, the President invoked the escape clause in the case of 9. He declined to do so in 14 cases. Included in this 14 figure are lead and zinc, on which he arranged an alternate remedy, and velveteen fabrics, where relief for the industry was afforded by the voluntary decision of our foreign suppliers to limit their export to us.

In each case where he decided not to invoke the escape clause, the President documented fully and publicly his reasons. In some cases the President concluded that serious injury as a result of imports had not been demonstrated; in others, that the proposed tariff increase would not remedy the situation in any significant way. While basing his decisions primarily on these considerations, the President—whose responsibility it is to conduct the foreign relations of the United States—obviously, also had to weigh the effects of particular actions on our relations with other nations, on our alliances, and on our military security itself.

As an example, in the case of fish fillets the President concluded that the raising of duties would not really improve the situation of our industry, and, as I interpreted his action, it might well push a friendly country far into a position of economic dependence on the Soviet Union. The country in question, Iceland, plays a vital role in our defense alliances by virtue of its geographic position. Therefore, instead of raising duties, the President decided instead to take a series of other measures which he judged would more effectively assist our domestic interests without prejudicing our relations with an essential ally.

This exemplifies the vital role played by the President's discretionary powers in these matters. I know that some wish to limit the President's discretion in escape clause cases. I submit that this would be little short of disastrous. These matters are never completely black or white, and they do vitally affect not only particular segments of our economy but also our national interest and national security as well. I believe it absolutely crucial that the President continue to retain discretionary powers in this vital area. I know these are strong words; I have purposely made them so.

RECIPROCAL NATURE OF TRADE PROGRAM

It has been charged that the reciprocal trade agreements program has in fact not been reciprocal; that we have reduced our duties without receiving in return equivalent reductions from our trading partners. The facts do not bear out this assertion. We have obtained direct tariff concessions from foreign countries on a wide range of commodities.

By the best estimates we have been able to make, we have obtained concessions from other countries—that is, duty reductions or bindings—on some $7 billion of United States exports, of which at least half would be exports of goods that pay duty in the importing country. For our part, we have granted concessions on about $7 billion also, but about three-fifths of this amount has consisted of binding rates for goods which already entered our market duty free.

Trade figures, of course, do not tell the entire story. Let us look at changes in the tariff levels of some of our principal trading partners during the period covered by the program.

The average ad valorem duty rate on Western Germany's imports, for example, was less than 8 percent in 1956. This contrasts sharply with the level in prewar Germany—26 percent in 1937. Over approximately the same interval, corresponding data for France show a decline from 17 percent to 6 percent, and the average rate on Italian imports fell from 12 percent to 8 percent.

For the United Kingdom, the statistical picture is somewhat obscured by the high British revenue duties on such items as liquor and tobacco. These levies, which are essentially consumption taxes, have been increased since the beginning of World War II. Exclusive of the revenue duties, however, the average British tariff rate has been reduced from 4 percent in fiscal 1938 to 2 percent in fiscal 1956.

Belgium and Sweden already had comparatively low tariffs before the war. Nevertheless, these also have been significantly reduced—from 9 percent in 1937 to 5½ percent in 1956 in the case of Sweden, and from 6 percent to 4 percent for Belgium-Luxembourg.

These examples show that other industrial members of the GATT have kept reasonably well in step with the United States in reducing tariff barriers from their high prewar levels. Generally speaking, tariff schedules of underdeveloped countries have not been characterized by similar reductions. Among such countries who are members of GATT, however, reciprocal concessions have certainly kept duties lower than would otherwise have been the case.

Following the war, many foreign countries imposed quantitative restrictions on dollars goods for balance-of-payments reasons. Such quota restrictions had considerable effect on trade patterns. We agreed that quotas could be used as long as balance-of-payments problems made them necessary. These financial problems deferred some of the benefits we obtain from tariff concessions, but this was inevitable as long as countries could not in any case pay dollars for more imports. There was full agreement by all parties, however, that quota restrictions should be relaxed and removed as rapidly as circumstances permit, and this basic principle is written into the GATT.

There has been very considerable progress in breaking down quotas on imports of our goods in recent years, particularly in Western Europe. Today, for example, Belgium and the Netherlands impose virtually no restrictions on imports of dollar goods. Germany has virtually eliminated its quantitative restrictions. Sweden has freed 70 percent of its private dollar imports from quota restrictions, Italy 72 percent, Denmark 55 percent, Norway 86 percent; in fact, practically all the countries of Western Europe have taken some steps to remove quotas on dollar imports. This development undoubtedly has played a part in the extremely favorable development of our European trade in recent years.

When foreign countries are judging whether their payments position permits the relaxation of their controls on dollar imports, one factor in the calculation is their evaluation of United States commercial policies. If they think we intend to follow a basically cooperative trading policy, they feel they can more safely reduce or eliminate their restrictions. The passage of this bill could only give impetus to the movement toward liberalization of dollar trade.

GATT AND OTC

To digress a moment, you all know that the General Agreement on Tariffs and Trade plays an important role in the trade-agreement picture. It embodies the basic provisions calling for multilateral, nondiscriminatory international trade, and it provides a mechanism through which negotiations looking to reciprocal tariff reductions are carried out.

To enable the GATT to perform its functions more efficiently and more effectively, the creation of an Organization for Trade Cooperation has been proposed. The administration, with my wholehearted support, has recommneded to the Congress that the United States concur in this action. The OTC itself would in no way limit our freedom of action, nor would it impose any new obligations on us. Its chief function would be to make GATT operations more efficient. Most of those who oppose OTC are those who have reservations about the reciprocal trade program itself, and who thus oppose GATT and any mechanism designed to make GATT operations more effective. If we agree that the reciprocal trade program itself is essential, as I firmly believe, it follows that OTC is a desirable adjunct.

I have already mentioned the Commerce Department's new responsibilities in reciprocal trade matters. If OTC comes into being, its role in these matters—and that of businessmen generally—will be further enhanced. Under the proposed bill authorizing United States membership in OTC, an advisory committee, chaired by the Secretary of Commerce and consisting of representatives of American industry, labor, agriculture, and the public, would be created to advise and consult with the United States chief representative on matters coming before OTC. And it is the President's intention to appoint as our chief representative someone having wide and practical business experience.

ADMINISTRATION'S PROPOSALS ANALYZED

We come now to the specific proposals contained in H. R. 10365. The committee has received a full analysis of the bill and is already familiar with its provisions, so I will be very brief.

First, the administration proposes that the President's authority to enter into trade agreements be extended for 5 years, from June 30, 1958, through June 30, 1963.

The extension is needed for the following reasons: In negotiating for reduction of impediments to United States exports, a better deal can be made if the negotiating country has confidence that our course will not be changed for at least 5 years. Substantial commercial arrangements in the foreign trade field extend over a long time; and governments, as well as commercial concerns, are reluctant to make long-term commitments unless they have some assurance that other governments will maintain a consistent policy for a reasonable length of time. Experience shows that foreign trade may be adversely affected by uncertainty about the trading policies of important countries, including our own.

As I have already explained, a 5-year renewal of negotiating authority is also necessary to enable us to help American industry and agriculture maintain and further develop their trade relationships with the European common market. It is important to American industry and agriculture that the new common market rates be as low as possible. The United States needs to undertake careful and exhaustive preparations and conduct detailed negotiations with the common market; and in order to do so, the President must be provided with sufficient authority.

The administration further proposes that additional authority be provided to reduce duties in carrying out trade agreements entered into between July 1, 1958, and July 1, 1963. This would consist of authority to reduce individual rates of duties to a point not below the lowest rate resulting from applying any one of the three following methods:

1. Reducing the rate to the level which would result from decreasing the July 1, 1958, rate by 5 successive annual reductions each equal to 5 percent of that rate. Under this method, the President would also be authorized to reduce a duty by this same total amount over a shorter period; however, 10 percent of the rate would be the maximum reduction which normally could be put into effect for the first time in any 1 year.

2. Reducing the July 1, 1958, rate by not more than 3 percentage points ad valorem. Such reductions would also have to take effect by stages, over a period not exceeding 5 years. However, normally, no more than 1 percentage point could be put into effect for the first time in any 1 year. This alternative authority would be significant in the case of rates of less than 12 percent, where 3 percentage points would be a larger reduction than the maximum reduction under the first method.

3. Reducing, as is presently authorized, an existing rate which is above 50 percent ad valorem down to 50 percent ad valorem. Here, too, reductions would have to be made gradually; not more than one-third of the total reduction could be put into effect for the first time in any 1 year. This alternative authority would be significant in cases of rates over 66⅔ percent, where it would permit a greater reduction than under the above first alternative method.

The peril-point provisions of the present legislation are reaffirmed.

The administration not only proposes that the peril-point and escape-clause procedures and other safeguards for American industry and labor in the present law be continued, but also that the safeguards be strengthened. Specifically, it is proposed that the President be given greater authority to raise duties. This additional authority will be valuable in escape-clause cases. The President would be authorized to raise duties as much as 50 percent over the rates which existed on July 1, 1934. This represents a significant change from the present law. In escape-clause cases the President now has authority (1) to terminate the trade-agreement concession, with the result that usually the rate established by the Tariff Act of 1930 then applies, or (2) to increase the duty by as much as 50 percent over the rate existing on January 1, 1945. Since on many items the 1934 rates were substantially higher than the 1945 rates, this change would increase the extent to which duties on such items could be raised where necessary to avert serious injury to domestic industries.

The administration also proposes that the law be amended to provide for more prompt and effective consideration of serious-injury cases under these circumstances: The Tariff Commission shall promptly institute an escape-clause investigation, if in the course of a peril-point investigation it finds (with respect to an article on the list upon which a tariff concession has been granted) that an increase in the existing duty or additional import restrictions is required to avoid serious injury.

Under present law, when the Tariff Commission finds that even the existing rate threatens injury, the President is required either (1) to negotiate to increase the rate to the point at which the risk is avoided or (2) to report later to Congress why he failed to do so. Experience has demonstrated that it is usually impracticable to negotiate increases. As a result, there is always a possibility that in such cases it may turn out that an escape-clause action is later instituted in order to give relief to the industry concerned. Meanwhile, several months might have elapsed.

Under this new procedure, no time would be lost in the event the increase were not negotiated. Rather, the procedures of the escape clause would have been started immediately upon the peril-point finding. In many such cases—provided the escape-clause investigations do confirm the threat of serious injury—this automatic procedure would have the effect of saving months in any eventual granting of relief afforded the industry concerned. An industry genuinely deserving relief should receive it without unnecessary delay.

SOVIET ECONOMIC OFFENSIVE

Up to this point I have been describing the bill itself and discussing its economic implications. I would now like to comment briefly on another factor to which I alluded earlier—the relation of this program to our Nation's security in the face of the Soviet threat. Let me quote a statement made by Mr. Krushchev on November 2, 1957:

"We declare war upon you—excuse me for using such an expression—in the peaceful field of trade. We declare a war we will win over the United States. The threat to the United States is not the ICBM, but in the field of peaceful production. We are relentless in this and it will prove the superiority of our system."

Clearly, the Soviet Union is conducting an economic offensive against the free world. Using combined programs of trade and aid, it is attempting to increase its influence in the free world and to lessen our own. Such a program, if successful, could seriously endanger our entire way of life.

The Soviet Union is apparently convinced that trade is the most effective way to influence and win over the peoples of the world—more effective than sputniks, more effective than progress in rocketry, missiles, and armaments. The Russians may well be right.

We would be ill advised to underestimate the economic capacity of the Soviet bloc to stage such an offensive, or the appeal which Soviet offers may hold for other countries. The threat posed by the Soviets in the trade field is a real and a serious one. It would be doubly serious if, while the Soviets preach and practice expanded trade, we were to retreat from our program and were to weaken ourselves by self-imposed restrictions on trade. Stop trade, and the nations dependent on international exchanges will surely move away from us and toward the Communist world.

Let me cite examples of Soviet trade moves which trend to increase their influence and prestige.

In its trade drive Russia is pinpointing areas of political ferment and economic distress in the free world, with particular emphasis on the underdeveloped countries. Within the past few months the Soviet Union has, for example, offered to take wool from Uruguary and coffee from Colombia. It has offered in return both finished manufactures, including machinery, and such interesting items as petroleum. The U. S. S. R. is buying much Egyptian cotton, and in 1957 was Egypt's most important customer. The Soviet pattern of offering to purchase basic commodities that have declined in price on world markets has been repeated in a number of other countries—Burma, for rice, and Ceylon, for rubber, are examples.

Paralleling these trade drives are Soviet programs under which attractive industrial installations are offered to underdeveloped countries at what appear to be bargain terms. To mention only one, the Russians have agreed to provide a steel mill to India. These credits to finance imports from the Soviet Union help the Soviet Union develop economic ties that may become difficult to throw off.

We need not meet the Soviet Union on every economic battlefield by offering to take commodities which are in adequate or surplus supply in the United States and for which our imports markets are limited. But the reciprocal trade-agreement program is one of our strongest weapons with which to counteract their offensive. It does not in itself provide the complete answer to Soviet economic penetration, but it is absolutely indispensable in the sense that, without it, nothing else we do is likely to be very effective. If we do not demonstrate to the world that we support the continuing reduction of obstacles to free-world trade, if our failure to take action weakens our friends to the point where they fall into economic dependence on the Soviet bloc, we will have lost a crucial battle in the epochal struggle of our era.

As I hope I have demonstrated, in this program there is no conflict whatever between our economic well-being and our political necessities. The wisdom of continuing the program therefore seems to me inescapable.

In my studies of these matters, I have looked back to see what eminent men in our public life have said about reciprocal trade treaties. I was particularly impressed by Theodore Roosevelt's statement, made in 1902, which I quote:

"It is greatly to be desired that such treaties may be adopted. They can be used to widen our markets and to give a greater field for the activities of our producers on the one hand, and on the other hand to secure in practical shape the lowering of duties when they are no longer needed for protection among our own people, or when the minimum of damage done may be disregarded for the sake of the maximum of good accomplished."

Gentlemen, everything in life is a matter of degree. I said earlier that in this trade problem the only possible thing that can be done today in this country is to exhibit a little give and take and use a moderate approach. This is not something either black or white, and we shall lose as a Nation if we insist on approaching it in these terms. The bill you are considering embodies the practical and moderate approach I advocate.

* * * * *

In conclusion, may I leave with you the thought which I have emphasized frequently today: Let those who advocate the defeat or weakening of the trade agreements program count all the cost.

Even though some of them may think they are shielding some business from some competition, their action, if successful, would jeopardize the job security of more than 4½ million American workers whose living depends on world trade. Such a threat would be wrong at any time, even more so in a period of business downturn with larger than seasonal unemployment.

The trade program will protect millions of American jobs. More trade will make more jobs.

Because of all the reasons set forth today, I have every confidence that the urgently needed trade legislation will be adopted by the Congress.

Fashion Foundation of America

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 19, 1958

Mr. DORN of New York. Mr. Speaker, it is my pleasure to take official cognizance of the program of the Fashion Foundation of America, organized to give recognition to designers of America by citing persons, places and products—encouraging better living through better design.

The Fashion Foundation of America believes the United States fashioners are the best equipped to meet the demands of American men and women in all fields of endeavor. Too often our talented artisans are overlooked because there are those who would have us believe it is no good unless it has a foreign label.

The American women are the best dressed in the world. The Fashion Foundation of America, in selecting the following America's best dressed women for 1957–58 paid special tribute to Mrs. Dwight D. Eisenhower for her modest but definite fashion leadership at official State functions:

Public life, Mrs. Dwight D. Eisenhower.
Ambassador of fashion, Mrs. Richard Nixon.
International set, Irene Albert.
Stage, Rosalind Russell.
Author, Duchess of Windsor.
Business, Helen Neushaefer.
Screen, Elizabeth Taylor.
Television, Denise Lor.
Supper clubs, Lena Horne.
Opera set, Mrs. Lauritz Melchior.
Hostess, Perle Mesta.
Press, Kathryn Cravens.
Saleswoman, Julia Meade.
Concerts, Elaine Malbin.
Sports, Mrs. Leon Mandel.
All-American, Mrs. Robert Meyner.

The following received Fashion Foundation of America medals symbolic of America's best dressed honors for 1957–58 in the men's division as announced by Ben Russell, prominent New York custom tailor, as chairman:

Statesman, Dwight D. Eisenhower.
Society, Henry Ford.
Press, Roy Howard.
Business, Jerome K. Ohrbach.
Producer, Bob Finkel.
Television, Jack Benny.
Host, Wilbur Clark.
Music, Sammy Kaye.
Stage, Robert Preston.
Screen, Cary Grant.

The following persons and products are among those cited for the gold medal award of the Fashion Foundation of America for 1958:

Oldric Royce, New York designer who left European capitals for America in 1939. Cited for originality and inspiration to youth in women's wear field.

Jesse Schwayder, of Denver, Colo., founder of Samsonite luggage, for his revolutionary luggage, ever mindful of

style and design above functional requirements.

Sam Rudofker, of Philadelphia, Pa., for After-Six Formal Wear, design and originality in the men's formal wear field.

H. B. Atwater, of Minneapolis, Minn., for Scott-Atwater outboard motors, outstanding design in the outboard motor field.

National Savings Banks

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. MULTER. Mr. Speaker, the president of the Washington Heights Federal Savings & Loan Association, Floyd Cramer, addressed the Mortgage Bankers Association of New York on February 19, 1958. On that occasion Mr. Cramer favorably commented on my bill H. R. 4296, which would create a National Mutual Savings Bank System. I am pleased to include Mr. Cramer's remarks, as follows:

REMARKS BY FLOYD CRAMER BEFORE MORTGAGE BANKERS ASSOCIATION OF NEW YORK, FEBRUARY 19, 1958

There is now before the Congress a bill which would create national savings banks. This bill, offered by Congressman MULTER, of Brooklyn, was also before the Congress in slightly different form a year ago. There was also a similar bill in 1949. The present bill is of interest largely because the Savings Banks Association of New York State has proposed that the Federal Government permit the charter of national savings banks with their supervision being under the Federal Home Loan Bank Board. This is the Federal agency which supervises Federal savings and loan associations and all other institutions whose accounts are insured by the Federal Savings and Loan Insurance Corporation. The Multer bill would also permit the conversion of Federal savings and loan associations into national savings banks.

In a sense the Multer bill and the proposal of the Savings Banks Association of New York State indicate a sort of consolidation of the savings and loan business with that of the savings-bank business. This would be the ultimate result if proposals of this sort were ultimately carried out. It would also probably result in a clear line of distinction being drawn between commercial banks and mutual savings banks. It would, in all probability, more clearly define the status of commercial banks on the one hand and thrift institutions on the other.

What are some of the results to be expected from such a move? Would it be in the public interest? Would such a combination of thrift institutions work to the detriment of commercial banks? Would they promote more thrift? Would that make more mortgage credit available and would it be at better terms to the public? These are questions the American public is entitled to ask and they are questions which will in all probability be put forth by Members of Congress before such legislation is forthcoming. It is too much to expect that the Congress of the United States would be in sense create another banking system without a thorough study of the entire matter. Such a study will take time and this probably means that no national savings banks legislation will occur for some time.

On the other hand, students of the proposal see much benefit to the public and to our national economy specifically from such a move. While it probably would not make more mortgage credit available at once there is reason to believe that it ultimately would do so. A consideration of the thrift institutions of the United States into savings and loan associations and savings banks with supervision by a Government agency primarily concerned with home financing most certainly would be conducive to more mortgage credit in the long run. National savings banks, Federal savings and loan associations, State chartered mutual savings banks and State chartered savings and loan associations with their separate charters but associated with one another as one industry would produce an exchange of ideas conducive to the better promotion of thrift and the better employment of such funds as better yields which would probably be more and more in mortgage loans. Furthermore there is every reason to believe that our present economy no longer needs a type of thrift institution whose funds are scattered for investment purposes such as was done by savings banks in the last century.

These thrift institutions, in their process of promoting more thrift and providing more mortgage capital, might initially frighten the commercial banking industry. There is no reason to believe, however, that commercial banks would suffer any loss of business in the long run from this competition. The role of commercial banks in a dynamic economy is a good one. If confined largely to the commercial fields they can still rise to heights of importance hitherto unknown in our country. Certainly the building societies and the mutual savings banks of Great Britain have long since played a more important role that is now being proposed for the thrift institutions of this country. The commercial banks of that country are quite satisfied with their situation and surely no one can seriously contend that the commercial banks of the British Isles are unimportant in British economy.

The Alleged Inherent Right of the Executive To Withhold Information From Congress

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. FASCELL. Mr. Speaker, for years the executive branch of the Government has encroached upon the field of lawmaking—all in the guise of inherent power.

Without constitutional direction, without statutory permission, without judicial sanction, the executive branch has slowly and surely introduced into our governmental structure a great mass of orders, rules and regulations designed to have the force and effect of law.

Upon occasion the President has even attempted to fashion law by letter, by press conference, or by mere oral communication. A particular example of this unusual lawmaking power came to light in our study in the Government Information Subcommittee of the Committee on Government Operations.

On May 17, 1954—during the Army-McCarthy hearings—President Eisenhower directed a letter to the Secretary of Defense concerning that Department's problems with supplying information to a congressional committee, the Senate Committee on Government Operations.

In effect, he said to the Secretary of Defense: You will instruct employees of your Department that in all of their appearances before the subcommittee of the Senate Committee on Government Operations regarding the inquiry now before it they are not to testify to any such conversations or communications or to produce any such documents or reproductions.

This was a mere letter of instruction. Yet at a hearing before our subcommittee on November 14, 1956, that mere letter was construed by legal counsel in the Department of Defense as the law.

Specifically, we were told:

Well, the May 17 letter is a statement of the law. I think you could analogize it to a decision of the Supreme Court. For example, the Supreme Court addresses itself to specific cases which are before it, but when it renders a decision on a specific case it enunciates law, and that law is relied upon by lawyers generally as an expression of what the law generally is.

The May 17 letter expresses the President's position with respect to a certain type of subject matter, and I do not think we could expect him to reinstruct us on each succeeding occasion once he had indicated what the position of the executive branch of the Government was to be (hearings, p. 1815).

Amazingly enough our subcommittee's hearing record indicates that this letter of May 17 has been cited by 19 agencies—House Report No. 2947, page 281—as authority for actions taken by other departments—other agencies. Similarly other committees of Congress have had this same letter or, the memorandum from the Attorney General attached to it, cited authoritatively about 11 times.

Why is this letter of May 17 cited so widely and so often interpreted as the law? We have been able to find no memorandum directing it to the attention of other heads of executive departments or executive agencies—hearings page 1821. It appears to be simply a letter to the Secretary of Defense.

But it was directed to departments and agencies we are told. Counsel within the Department of Defense explains:

The very day it came out the whole matter was given publicity by a press release * * * the press release was transmitted throughout the Government (hearings, p. 1821).

A great deal of information is so informally communicated they say.

A letter—a press release—a writing from the President's Office—anything enunciating a principle is enough we are told. "It is binding." In this particular instance the Defense Department attorneys tell us that it is bound by the President's letter of May 17, and its interpretations as expounded in a press conference of July 6, 1955, a letter from Sherman Adams to Hon. WILLIAM L. DAWSON on July 2, 1956, and a letter from Mr. Gerald Morgan to Mr. Clark Mollenhoff, of the Des Moines Register, on October 26, 1956—hearings, page 1830.

And so it appears that if the President chooses to enunciate a principle, it makes

no difference how it is communicated, the Defense Department is bound by it—hearings, page 1831—other departments and agencies are bound by it—"it enunciates the law."

If we are to silently submit and not object to these methods and these interpretations of so-called binding law we are abdicating our legislative power vested in the Congress of the United States by the Constitution.

If we submit to this unqualified, unsupported, unfortified claim of "inherent power" in the Executive, the day will come when Congress will not have to come to Washington. The Executive will fully legislate as well as administer.

Therefore, my distinguished colleagues, I repeat what the House Government Information Subcommittee reported, and unanimously approved by the 30-member full Committee on Government Operations, in its report to the House in July 1956:

The most flagrant abuse of so-called legal authority is the misuse of the May 17, 1954, letter from the President to the Secretary of Defense at the time of the Army-McCarthy controversy. Regardless of the questionable legal basis of the Attorney General's memorandum on which the President acted, the letter was, by its very terms, a specific instruction to the Secretary of Defense for a specific purpose and to a specific committee of the Senate. It seems inconceivable that 19 Government departments and agencies would cite this letter as a shadowy cloak of authority to restrict or withhold information from the Congress and the public. This flimsy pretext of so-called legal authority only serves to demonstrate to what extent executive departments and agencies will go to restrict or withhold information.

The letters discussed are as follows:

THE WHITE HOUSE.

The honorable the SECRETARY OF DEFENSE,
Washington, D. C.

DEAR MR. SECRETARY: It has long been recognized that to assist the Congress in achieving its legislative purposes every executive department or agency must, upon the request of a congressional committee, expeditiously furnish information relating to any matter within the jurisdiction of the committee, with certain historical exceptions—some of which are pointed out in the attached memorandum from the Attorney General. This administration has been and will continue to be diligent in following this principle. However, it is essential to the successful working of our system that the persons entrusted with power in any 1 of the 3 great branches of Government shall not encroach upon the authority confided to the others. The ultimate responsibility for the conduct of the executive branch rests with the President.

Within this constitutional framework each branch should cooperate fully with each other for the common good. However, throughout our history the President has withheld information whenever he found that what was sought was confidential or its disclosure would be incompatible with the public interest or jeopardize the safety of the Nation.

Because it is essential to efficient and effective administration that employees of the executive branch be in a position to be completely candid in advising with each other on official matters, and because it is not in the public interest that any of their conversations or communications or any documents or reproductions concerning such advice be disclosed, you will instruct employees of your Department that in all of their appearances before the subcommittee of the Senate Committee on Government Operations regarding the inquiry now before it they are not to testify to any such conversations or communications or to produce any such documents or reproductions. This principle must be maintained regardless of who would be benefited by such disclosures.

I direct this action so as to maintain the proper separation of powers between the executive and legislative branches of the Government in accordance with my responsibilities and duties under the Constitution. This separation is vital to preclude the exercise of arbitrary power by any branch of the Government.

By this action I am not in any way restricting the testimony of such witnesses as to what occurred regarding any matters where the communication was directly between any of the principals in the controversy within the executive branch on the one hand and a member of the subcommittee or its staff on the other.

Sincerely,

DWIGHT D. EISENHOWER.

OCTOBER 26, 1956.

Mr. CLARK R. MOLLENHOFF,
Des Moines Register and Tribune,
National Press Building,
Washington, D. C.

DEAR CLARK: At the press conference on September 27, 1956, you asked the President whether all employees of the Federal Government, at their own discretion, can determine whether they will testify or will not testify before congressional committees when there is no security problem involved.

In the President's letter of May 17, 1954, to Secretary Wilson, the President set forth the general principles that are to govern all employees in the executive branch concerning their testimony, or the production of documents, relating to their conversations or communications with, or their advice to, each other on official matters. In his press conference of July 6, 1955, the President further amplified the principles set forth in this letter as follows:

"If anybody in an official position of this Government does anything which is an official act, and submits it either in the form of recommendation or anything else, that is properly a matter for investigation if Congress so chooses, provided the national security is not involved.

"But when it comes to the conversations that take place between any responsible official and his advisers, or exchange or mere little slips, of this or that, expressing personal opinions on the most confidential basis, those are not subject to investigation by anybody. And if they are it will wreck the Government."

In so writing to Secretary Wilson, and in further amplifying these principles, the President was exercising a right, which is his, and his alone, to determine what action is necessary to maintain the proper separation of powers between the executive and legislative branches of the Government. In the orderly administration of the Government, the head of each executive agency directs the manner in which these principles are enforced.

The underlying reasons for these principles are set forth in the President's letter of May 17, 1954. It is essential to efficient and effective administration that employees of the executive branch be in a position to be completely candid in advising each other on official matters. It is essential, if channels of information are to be kept open, that confidences among employees should not be breached.

It will continue to be this administration's policy to keep the Congress and the people fully informed of what is being done in the executive branch. An employee is not free merely to exercise his own discretion but in the final analysis information will be withheld only when the President or agency heads acting under the President's authority or instruction determine it is contrary to the public interest to disclose it.

All of the above, of course, is subject to the Executive order dealing with the classification of information in the interest of security, and to the various statutes and regulations of the department and agencies relating to information to be held in confidence.

I hope this answers your inquiry.

Sincerely,

GERALD D. MORGAN,
Special Counsel to the President.

THE WHITE HOUSE,
Washington, July 2, 1956.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations, House of Representatives, Washington, D. C.

DEAR MR. DAWSON: This will acknowledge your June 25 letter to the President about a book by Robert J. Donovan.

Your letter refers to minutes of the Cabinet and to verbatim reports of Cabinet meetings. Cabinet discussions are not so recorded. When the Cabinet acts on a matter, a memorandum is prepared. This is called a Cabinet record of action. Some of these memorandums relate to classified matters affecting national security; many do not. However, regardless of classification, all Cabinet actions constitute advice to the President. I cannot agree with your observation that the privileged nature of advice to the President is "dissipated" by the publication of Mr. Donovan's book, whatever it may concern.

Obivously, I cannot agree with the implication in your letter that your committee and its subcommittees may examine Cabinet records in instances where it is felt that certain information may not have been made available by department or agency officers.

Final official action taken by an executive department or agency on any subject is the very proper concern of Congress and the public. In this connection, the President's record for prompt and full publication of the business of his administration needs no elaboration. It has been, and shall remain, the purpose of this administration to keep Congress and the public fully informed of our actions and the reasons which underlie them.

It has, of course, been necessary on occasion, for reasons of national security, to give some of this information to committees of Congress on a classified basis. But in any event, the Congress and the public have been kept informed of the actions of this administration, and I can assure you, they will continue to be so informed.

It should also be borne in mind that the public interest demands orderly and efficient operation of the executive branch of the Government. This order and efficiency could not be maintained if officers and employees were not in a position to be completely candid with each other in discussing their official business. Therefore, while final actions of Government should be made known, it does not necessarily follow that the public interest is also served by divulging the discussions, recommendations, or advice of subordinates.

I note your reference to a passage in Mr. Donovan's book which apparently discusses a Cabinet meeting abo[illegible] advisory committees. I am [illegible] with the passage, and in an[illegible] not presume to assess its ac[illegible]r, I can assure you that your [illegible]dvisory committees commends its[illegible]epartment or agency making us[illegible]committees. In any such instanc[illegible] responsible officers of the department [illegible] stand ready to answer the questions [illegible] committee, and all appropriate comm[illegible]

of Congress, on whatever final action that department or agency may have taken.

This cooperation, as you are aware, is not limited to questions about advisory committees. I want to again assure you that on all official matters, each department and agency shall continue to give Congress and its committees the same cooperation, and the same information we have repeatedly given about final actions and the general reasons which underlie them.

Sincerely,

SHERMAN ADAMS.

Dwindling Military Reserve Strength

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, March 10, 1958

Mr. CRETELLA. Mr. Speaker, there have been recent proposals put forward by the Department of Defense for cutbacks in the strength of the National Guard. I do not need to go into the many reasons for the existence of the National Guard, and the fine service it has been performing throughout the years. Below is a letter from the commanding general of the 43d National Guard Infantry Division, Gen. Edmund R. Walker, which, I think, deserves the attention of all Members of this body:

HEADQUARTERS 43D
INFANTRY DIVISION,
Brainard Field,
Hartford, Conn., February 24, 1958.

Hon. ALBERT W. CRETELLA,
House of Representatives,
Washington, D. C.

DEAR MR. CRETELLA: Throughout the last 6 months, reports have continued to reach me that new cutbacks are planned in the National Guard. A year ago, as you will remember, the strength level authorized was cut to 400,000 men, with new recruits to be drawn only from those who would participate in the 6-months training program. This was accompanied by assurances that the strength would not be allowed to fall below the 400,000 level.

Nothing official in the way of a change has since come to me. Budget estimates, however, and comment thereon have indicated that changes are contemplated, and the testimony of Assistant Secretary Milton is not encouraging. As a citizen-soldier, I am profoundly disturbed by the pattern of dwindling military reserve strength. I have been associated with the military since I first enrolled in the ROTC program at the University of Connecticut more than 26 years ago. I have spent some 7 years of my life on active duty. I have followed military affairs closely and I should like to appeal to you to examine closely any further plans to reduce the troop basis of the National Guard.

A National Guard organization, such as the 43d Infantry Division, is an insurance investment. It is maintained at a fraction of the cost of a Regular division. It is usually issued less than 50 percent equipment pending mobilization. The capital investment in an active division was once estimated at some $140 million and annual turnover at $96 million; that in a guard division is at least one-tenth that figure, as critical items of supply are withheld and ordnance is limited to that needed for training. The payroll authorized a guard division is limited according to the manpower ceiling.

At the same time, a guard division is a working organization. It is not a paper outfit. Its men are trained to work as a team. When we go to camp, we are self-supporting—the active Army does not cook for us or issue blankets and sheets to us. When, therefore, there is need for Army strength, it is the guard that is called to double or triple the number of divisions on active duty. In 1941, some 18 guard divisions were mobilized to double the number on active duty. In 1950, the 43d was 1 of 4 guard divisions immediately summoned (in all, 8 were federalized) to become, as Gen. J. Lawton Collins told us that fall, the general reserve of the United States Army. And you will recall that Gen. Douglas MacArthur testified to Congress that he had asked, in December, immediate reinforcement by the four guard divisions. Despite the fact that everyone—Department of the Army included—wanted these divisions, which had thousands of untrained selectees added to their ranks, to complete as much of the training cycle as possible, these units could have moved overseas then because of the training concept of the National Guard, which stresses ready, working units.

This is not to disparage the Army Reserve, which, like the guard, is a valuable reservoir of training skills, and has provided thousands of individuals an opportunity to keep up their military usefulness to the Nation. Yet I would also point out to you that the States help support the National Guard, through armory contributions, uniform allowance, and other funds, while the Reserve is totally a Federal function. It seems strange that Washington, at a time when it is considering reallocation of the burdens of Government, would strengthen a federally supported agency while weakening one whose costs are shared at State level.

Perhaps it would be well, too, to consider the guards' value to Connecticut (as well as Rhode Island and Vermont, so far as the 43d is concerned). This was proven as recently as August 1955 and thereafter when the guard units were summoned to restore order in flood-stricken communities and provide assistance to civil authorities. Without a disciplined working force, the problem would have been much more severe than it was. Our units cooked food, handled inoculations, patrolled streets, cleared debris, and did many other things until help could arrive and civil authorities resume full responsibility. Our own 43d division helicopter was the first into the Farmington River Valley area, and its pilot is credited with saving at least 12 lives.

The apportionment of National Guard divisions that was worked out in 1925 authorized two in the New England area. If 1 of these divisions should be eliminated, that would leave 3 States without adequate military forces in case of a serious problem. The Guard units are dispersed and able to handle a crisis where order must be imposed at once. To say that a troop basis of the Guard can be reduced in numbers by eliminating divisions—as the active Army does it—is unrealistic to say the least. The entire geographical balance is upset. And it is noteworthy that there is no regular division in the entire First Army area to backstop the reserve mission.

As you undoubtedly know, the 43d has been mentioned as 1 division that might be eliminated. This supposition is based on certain criteria reported to have been suggested by Army planners. They include, among others: (a) strength, (b) Army area, (c) divided State authority, and (d) absence of historical tradition.

Let me discuss the strength factor. The present three-State strength of the 43d is roughly 7,500. This compares with about 8,500 when the division was ordered to active duty in 1950. At that time the division ranked among the top third of the Guard units in the country, having started on an equal basis with all, been among the first to complete its organization, and having recruited vigorously.

On the return home of the division cadre in 1952, however, all that had gone. All men had served their obligation and been released. The inactive Guard divisions had continued their recruiting and built their strength totals to excellent figures. The 43d started from scratch in an area noted for high industrial activity and scarcity of manpower. There were artificial limitations placed to prevent the Guard nationally from exceeding its budget figures. These have varied, but the limitations, plus new ones, with respect to training, have handicapped recruiting.

Nevertheless we have worked hard and, I believe, well. We drew back many of those who had served on active duty for 2 years. This represented an outstanding cadre. I may point out that during our tour, we had sent 3,900 officers and enlisted men to service schools, in addition to guiding all through a paced training program. Recently, since we have had the opportunity to participate in the 6-months training program, we have had more than 600 volunteer to take part.

The present strength of the 43d, therefore, includes a high number of recently burnished skills. The training of these men represents a significant investment for the Government. The time they have put in, often over and above any paid hours, is a significant investment for them, too. Both total an impressive equity for the country.

The other criteria, so far as they point to the 43d, are disputable. The geographical basis of elimination must be weighed against the value of dispersed armed Reserve strength. First Army area is one of high industrial importance, and certainly New England needs more than one division in place. And, note again, there are no regular divisions stationed in First Army area as there are elsewhere.

As for divided State authority, admittedly the allotment of 43d Division units among Vermont, Connecticut, and Rhode Island offers administrative complication. But these States have always loyally supported the 43d Division, and I cannot imagine administrative ease for the Pentagon being a controlling factor in the elimination of trained units.

Nor should the 43d Division have anything to fear in the way of historical tradition. From the train bands of 1639 to the Presidential Unit citations of 1945 and to the first National Guard division to go overseas to the European theater and NATO in 1951, New Englanders have compiled a fine record. The high basic combat readiness rating of the 43d in 1951 when it departed Hampton Roads, and the outstanding record it compiled in Europe until the breakup of its National Guard and selectee core in 1952 attest to that.

Basically, however, the issue comes down to one of what kind of reserve the country needs and must have. I realize that the uncertainties of a shifting weapons technology lead some to believe that the reserve is secondary. To my mind this argument is totally wrong and could be disastrous. A sudden blow at key centers would make more vital than ever a dispersed, trained armed force to restore order and form the base for future action. That is a traditional role of the National Guard.

The premiums paid on the insurance represented by the National Guard—and perhaps, since our headquarters are in Hartford—I lean unconsciously too much on the insurance analogy—are not high. The percentage of the gross national product allotted to our security and defense, roughly 10 percent, is not high, either, compared with the loss of that gross national product in its entirety if we should lose a war with the

Soviet Union. As a citizen-soldier, I am greatly concerned at anything that looks like tampering with the reserve troop structure. I hope you will take a long look at any such plan if it should be presented to you.

Thank you for your kindness in reading this letter. Let me invite you, if you should have the time in Hartford some Monday night, to visit our division headquarters at Brainard Field and see the pattern of National Guard activity from there—or from any of the 43d Division units in the State. We expect to be training at Camp Drum, N. Y., from June 20, to July 5, and would welcome you there, too.

Sincerely yours,

EDMUND R. WALKER,
Major General,
Connecticut National Guard.

Tax Cut Could Be Best Weapon in Battle Against Recession

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. PRICE. Mr. Speaker, a number of measures have been taken or proposed for reversing the recession that has sharply reduced production in many industries, brought unemployment to over 5,000,000 workers, cut the paychecks of millions more in the labor force, and added heavy financial burdens to State and local governments as unemployment compensation coverage runs out for thousands of the jobless.

It is a bit difficult to know how the administration really views the recession. On February 12, the President said "every indication is that March will commence to see the start of a pickup in job opportunities. That should mark the beginning of the end of the downturn in our economy." A week later, however, Gabriel Hauge, his economic assistant, said there was a "mistaken impression" that the President had "predicted a business upturn in March."

The administration has failed to realize that economic slumps can snowball, growing progressively worse while the Government stands hesitant or takes only faltering steps to halt the recession's growth.

There are many economists who believe that a reduction in income taxes would have the effect of helping halt the recession by increasing consumer spending. Reductions effective in 1949 stimulated consumer spending and were a bulwark against the recession of that year. In 1954—another year of recession—tax concessions were translated almost dollar for dollar into an increase in consumer buying and business sales, which were a major supporting factor in the economy.

The senior Senator from Illinois, PAUL DOUGLAS, has introduced alternative bills reducing Federal taxes. One of these would increase the personnal exemption from $600 to $700; the other would cut the tax on the first $1,000 of net income from 20 to 15 percent. A number of excise taxes would also be decreased by these bills. The total tax remission would be about $4.4 billion.

These tax-cutting legislation and simflar proposals deserve serious consideration now. In line with the objectives of this legislation is the following editorial from Labor's Daily of March 8, 1958:

RECESSION CAN BE STOPPED

Prof. Gustav Cassell, of Sweden, said many years ago that any country could get out of a depression if it just waited long enough—until sufficient industrial plant and equipment had rusted out and worn out. Then, he said, capacity would fall short and a reinvestment advance would begin, enlarging incomes, and pushing the economy upward.

Cassell didn't recommend this policy. He was an early advocate, even before John Maynard Keynes, of England, of government spending and taxing policy to stabilize the economy. Under his leadership, Sweden had a successful economic stabilization policy long before most western governments began to assume such responsibility. The United States did not adopts its Employment Act, assigning such responsibility to the Federal Government, until 1946.

Today, no modern government dares fall back on the archaic natural remedy for depression. Democratic governments cannot stand idly by as unemployment mounts.

The United States is now in a recession which has been gathering impetus for several months. The first signs of it appeared in the middle of 1957. Some leading Government and private economists thought that the Federal Government should start acting as early as last August. Among these was Arthur Burns, the former chairman of the President's Council of Economic Advisers. Burns differed with the Federal Reserve Board on money policy—that is, he thought credit should have been loosened earlier than it was.

The Federal Reserve Board and the Eisenhower administration are worried about overdoing recovery measures and thus bringing on a new burst of inflation. This is the reason the Fed has been slow and cautious about easing money. This is the reason why the administration has not yet recommended a tax cut nor proposed anything more than a mild step up in public-works spending. The President and his advisers are counting on somewhat larger defense spending to pull the country out of the slump.

Those who take the cautious view about antidepression measures believe that the 1958 recession is shaping up much like the recessions of 1949 and 1954. These downswings were moderate and recovery was quick. Here is a table showing the changes in the gross national product (GNP) in these recessions, compared with the figures for the current dip. The GNP is the total value of production of goods and services at current prices.

	GNP in billions at annual rate
1949 recession:	
4th quarter 1948	264
1st quarter 1949	256
4th quarter 1949	255
2d quarter 1950	270
1954 recession:	
2d quarter 1953	370
4th quarter 1953	364
1st quarter 1954	358
4th quarter 1954	364
1958 recession:	
3d quarter 1957	439
4th quarter 1957	433

A study of the major components of the GNP leads many economists to believe there will be a leveling off, or perhaps a small pickup, in the second quarter of 1958. But this is only a guess, and in the present critical stage of the recession, a change in consumer and business spending plans would turn the economw farther downward.

Even if a leveling off does occur, this would mean that the economy was failing to make sufficient progress to maintain full employment. Suppose the GNP measures $430 billion (annual rate) next quarter. This would be $16 billion less than would have been produced if the progress of the last few years had been maintained (not counting the rise in prices).

Since the size of the work force is continuing to grow, this would mean a further increase in unemployment. Arthur Upgren, professor of economics at Macalester College in St. Paul and one of the country's leading economists, figures that a leveling off in 1958 would mean about 2½ million more unemployed this year.

What can be done about it? Those who are comparing this recession with 1949 and 1954 may have forgotten that the Federal Government acted promptly and vigorously in both these instances.

In 1949 taxes were reduced (over President Truman's veto). This was a leading factor in the rise in GNP of $21 billion in 6 months—and entirely before the outbreak of the Korean war. Tax revenues actually increased, despite the lower rates, because business picked up so fast.

In 1954 taxes also were reduced sharply, and the Federal Reserve Board made credit easier. Again tax revenues increased as economic activity expanded. GNP increased by $52 billion from 1954 to 1956.

In both these recessions, therefore, quick tax reduction was effective, and it cost less than nothing, because total revenues rose substantially.

Government antirecession policy is a very inexact and clumsy science so far. Yet there are a few things which have been learned in recent years in keeping United States recessions small. One is that prompt tax reduction is effective.

If tax reduction is postponed too long, it will be necessary for the Government to pull more drastic antirecession tools out of the bag. Spending for public works would have to be stepped up sharply. As the recession deepened, the difficulty of pulling the Nation out of the doldrums would increase.

For this reason, it is much better to err on the side of inflation at this stage of the recession (and considering our limited experience and knoweldge about stabilizing the economy) than to wait and let unemployment grow. The methods may be crude, but we do know how to keep a recession from advancing. Tax cuts in time may do the job. They ought to be tried soon before more radical measures become necessary.

Mr. and Mrs. United States

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. BOSCH. Mr. Speaker, is the Congress to be divested of all its powers? It appears from a number of recent decisions of the Supreme Court that we must reassert our authority and duties as set forth in the Constitution—now there is the threat to the control over the purse which the Congress has always had, and I pray that we will maintain that control.

Under leave to extend my remarks, I include the column of Walter Winchell,

which appeared in the March 5, 1958, edition of the New York Mirror. This column is a tribute to our colleagues, Hon. LESLIE ARENDS, of Illinois, and Hon. CARL VINSON, of Georgia.

The article follows:

MR. AND MRS. UNITED STATES

Only a very few experts realize it—but our country is on the verge of the greatest constitutional crisis in its history. The headlines are misleading the country into believing that it is a fight over the reorganization of the Defense Department. That is merely the surface struggle. Beneath it is the offered new concept that Congress can sign a blank check for any Government department including Defense without directing where it goes. The issue, therefore, is not whether any department gets a blank check—but whether Congress has the constitutional power to give it at all. There are men on both sides of the aisle—on Capital Hill today—Republican and Democrat—who will tell you that the first blank check Congress ever signs for any Government department will not be an appropriation bill—it will be the death warrant of the Congress itself.

That's why the coming fight on the Hill will be to the death—the death of our oldest constitutional principle—or the death of the new usurping one. The fight will not be at the barricades nor at the bloody angles. It will be by debate and vote. But the effect on our country will not be less deadly. Because, if the Congress loses, it will, like the Reichstag, have voted itself out of useful existence.

It is an American tradition that every crisis produces the man to solve it. This crisis is so deep that it has produced two: Congressman CARL VINSON, Democrat, of Georgia, chairman of the House Armed Services Committee, and Republican whip LESLIE C. ARENDS, of Illinois. These statesmen have dropped all party lines to defend the basic principle that the American Government belongs to the American people. The thankless and desperate fight they are waging will bring them no monuments. If the fight is won, America will continue as a country having Armed Forces; if they lose, it may follow the European pattern where the Armed Forces think of themselves as having a country.

The amazing thing is that the American people are not amazed at the turn of events. Why do we have to have a Vinson to tell us that the Weimar Constitution of Germany was patterned on ours and that Hitler was able to twist it into the Nazi swastika by simply giving the chief of the army High Command unlimited funds beyond the control of the Reichstag? On that issue you would think 350,000 white crosses and Stars of David speak for themselves. And why does Senator SYMINGTON have to yell that the refusal of the Defense Department to apply the sums voted for the purpose Congress intended is already here and that it is the most deadly threat to civilian control in this 20th century? Our admittedly defenseless skies prove his point.

Why does a selfless American like LESLIE ARENDS, Republican whip, put aside all other consideration to uphold the banner of congressional control? The answer is the same for them as it is for you. They have children and grandchildren and they know the second the purse strings go out of the hands of Congress, they will become the hangman's rope around the Statue of Liberty's neck.

Already the present state of the Constitution is enough to wither the statues of the Founding Fathers. For example, the Constitution provides that the Congress alone shall declare war. But the fact is, the Congress has never declared war: In every case, it has declared that war already existed because the executive branch had thrown the Armed Forces into action. Again, it will astonish most Americans to learn that the State Department consented to Japan's grabbing of Korea back in 1904. By constitutional threat? No, by secret executive agreement—and it took 100,000 American casualties to correct that lapse of constitutional law.

Moreover, it will shock most Americans to learn that the published national budget—once the absolute bedrock of integrity—is now false. Why? Because with the consent of a few leading people, hundreds of millions of dollars are concealed under false titles for secret intelligence purposes. All of these devises may spell out the terrific pressure of the times, but they also spell out that the American people are losing control of their Government. And if Congress abdicates control of its appropriating power, it will be only a matter of time before the American people lose control of their Government completely.

This writer can well sympathize with them. When, 10 years ago, this column urged 70 air groups, and Congress appropriated the money for them, the great brains across the Potomac cut them down to 41 on the ground that full defense might lead to rationing. Now 120 aren't enough. The same school of thought now wants to give one man as yet unnamed (and by statute yet unborn) the power to cut the fleet, whittle away the Army, abolish the National Guard, ground half of the Air Corps and skeletonize the Marines without a word of public debate. The method is all too deadly simple. All you have to do is to secretly cut the appropriation, by someone not responsible to the people. It is a quiet death by comma and semicolon, see what I mean? Ironically enough if precedent holds true, the unknown person and his few unknown assistants (who will make these decisions behind closed doors) as of this time probably have not had two weeks of actual combat experience between them.

After 20 years in this struggle, this reporter can tell his fellow Americans the only really hard lessons the 20th century teaches: When it comes to war, there is no second money. You can't place or show in the power game. You either win or lose. And no body of people have a better understanding of this than the civilian Congress—that body of Government closest to the people.

His opposition is trying to point Chairman VINSON as a man who wants to keep closest to the Nation's pocketbook. His long and magnificent record however shows he is closest to the American people's heard. His integrity speaks for itself: What he would die to protect from the country's enemies he most certainly would never vote away to even its closest so-called friends—because he believes it belongs to the American people.

This is still a free country. You don't have to stand around with your hands in your pockets while the Honorable VINSON, ARENDS, SYMINGTON and KILDAY fight for your rights. You can use your mitts, too, and this reporter intends to. To the Honorable CARL VINSON, LESLIE ARENDS, STUART SYMINGTON and PAUL J. KILDAY: To the best of my ability, I'll held defend your powers of appropriation as part of the same great document which guarantees me a free typewriter. And by virtue of no power whatsoever in me vested, I hereby appoint you to the most honorable title any American could wish: Fighting Watchdogs of the United States Constitution.

Tribute to Cardinal Stritch by Washington's Archdiocesan Newspaper

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 10, 1958

Mr. O'HARA of Illinois. Mr. Speaker, in the city of Chicago, where he is deeply beloved, the appointment of Samuel Alphonsus Cardinal Stritch to the post of proprefect of the Vatican's Sacred Congregation for the Propagation of the Faith, there is both joy and sadness.

Chicago rejoices in the signal honor which has come to us and the church in America, for Cardinal Stritch is the first American prelate named to the Roman Curia and head of one of the departments of the church's central administration. But joy is tempered with sorrow for we shall miss the great spiritual leadership which his eminence has given us.

In a formal statement in the New World, official weekly newspaper of the archdiocese of Chicago, Cardinal Stritch said he "would have to take up my residence in Rome for the discharge of the duties of this important office in the Roman Curia," that he felt humbly thankful for the honor done the American church and particularly the clergy and laity of the Chicago archdiocese, but that his "heart was heavy with the thought I must leave you, whom I love with the tenderest fatherly affection."

I am extending my remarks to include an editorial from the Catholic Standard, Washington's archdiocesan newspaper, on the appointment of His Eminence.

The editorial follows:

APPOINTMENT OF CARDINAL STRITCH

When the young seminarian, Samuel A. Stritch, left his home in Nashville in 1903 to continue his studies at the North American College in Rome, the church in the United States was still in a missionary status. It was still under the jurisdiction of the Congregation of the Propagation of the Faith.

While he was still a seminarian in Rome, the church in the United States was removed from its missionary status. Since his ordination in 1910, the cardinal has been associated with almost every great movement affecting the church and our country since then.

Consecrated the bishop of Toledo in 1921 at the age of 34, and later transferred to the archdiocese of Milwaukee, he has experienced the difficulties administering dioceses in industrial areas during the days of the depression. As chancellor of the Catholic Church Extension Society, he has met the problems of forwarding the building of churches in the sparsest mission areas of the country.

Just as World War II engulfed the world, he was appointed to two key posts—ordinary of the archdiocese of Chicago and chairman of the administrative board of the National Catholic Welfare Conference. In these positions, he has helped to solve great problems.

If, as the cardinal said of his appointment, his holiness "principally had in mind honoring the church in the United States," the choice was very felicitous and the great wisdom of the holy father is again demonstrated.

Address by Hon. Theodore Francis Green, of Rhode Island, at Dedication of Navy Pier, Davisville, R. I.

EXTENSION OF REMARKS
OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, March 11, 1958

Mr. GREEN. Mr. President, on Wedneday, March 5, at Davisville, R. I., I delivered an address at the dedication of the new Navy Pier at the United States Naval Construction Battalion Center. I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY UNITED STATES SENATOR THEODORE FRANCIS GREEN, AT DEDICATION OF NAVY PIER, UNITED STATES NAVAL CONSTRUCTION BATTALION CENTER, DAVISVILLE, R. I., MARCH 5, 1958

Captain Husband, Governor Roberts, Admiral Peltier, Admiral Crommelin, and other distinguished guests, this is one of the most gratifying birthday celebrations I have ever had the pleasure of attending, and I have attended quite a number of them, as you know.

This occasion is gratifying to me for several reasons. As an American citizen, I have a vital interest in the progress of our National Defense Establishment. And I'm sure you will all agree that this pier represents its material progress.

Then, as a member of the United States Government, I am gratified because today I am privileged to see personally the realization of one of the many projects which we in the Congress are studying, considering, and supporting in the cause of a stronger America.

And certainly as a native of Rhode Island I am gratified to see this new facility added to the naval installations in this area. It is at once a vindication of my faith in this State and evidence that the Navy has the good sense to agree with my judgment.

For all these reasons, it is a great pleasure for me to have been invited to dedicate this new pier at the Naval Construction Battalion Center. At the same time I feel fortunate in having the opportunity to welcome all of you who have come here to visit or to work in Rhode Island. I hope you will thoroughly enjoy your stay here and come back often.

As you can see, I am a solid booster of the State which I have the honor to represent in the United States Senate. I could wish for no greater honor than to have been chosen by my friends and neighbors to occupy my present position. And I feel sure that you ladies and gentlemen who have come here to live in line of military duty will soon come to know and love the State as I do. I hope so because there is a deplorable tendency in some of our larger States to ridicule Rhode Island merely because it is small. However, as you get to know us better you will see that this is rather like the stomach poking fun at the heart.

Just as I am a booster for my home State, so I am also a booster for the Navy. (Some people seem to think I am one of the original ones.) At any rate I have always been proud to proclaim myself as a big-Navy man. I have never, and I do not now wish to disparage any segment of our defense team But I am convinced beyond any doubt of the indispensable role of our seagoing forces in the defense of America.

It seems to be an old American trait to climb on bandwagons. It certainly is true in politics. And apparently it is equally true in military planning. At any rate we find ourselves today surrounded by enthusiasts who would have us abandon various parts of our military establishment and concentrate on the one service or branch in which they are interested. They would have us pin all our hopes on the airplane, or the missile, or indeed, even the push button. They assure us that, if we dwell upon this or that enthusiasm of theirs, we shall be sublimely impregnable, regardless of where, how or when we are attacked. Indeed, as I listen to their rhapsodic forecasts, I sometimes wonder if we have not already a number of men floating about in space oblivious of gravitational and other considerations.

Certainly these men cannot have studied all the implications of present-day military developments or of our situation in relation to those developments. As for me, I would not pretend that the Navy, or any other single service, can alone protect us from our enemies. But I certainly would suggest that no sensible military man can look at the two wide oceans that bound our Nation on the east and west and then dismiss lightly the mission of the United States Navy. I believe that the Navy is, and must remain in the foreseeable future, our first line of national defense.

If one is realistic enough to look the facts of military life in the face and recognize the genuine need for a well-rounded defense composed of all our military branches, he must inevitably be realistic enough to recognize also that the only way we can be truly impregnable is to keep that military strong, modern and alert.

Here, I think, we run into another kind of enthusiasm which is equally unrealistic and equally dangerous. This is the tendency to concentrate our interest upon that part of the military which attracts the headlines in the press.

It is perfectly natural that the firing of a new missile, the setting of a new airplane speed record or the launching of an atomic submarine should capture the imagination of the public. These are dramatic events, full of tension and excitement, if they do not end in a flop.

But in our attempt to be realistic about our military preparedness, we must never allow the dramatic to obscure the quiet, steady, behind-the-scenes aspect of military activity. We must remember that it is the steady, efficient flow of logistic support that makes possible the success of the headline-stealing devices we admire so much. Indeed, the performance of you men who do the construction, supply and other noncombatant work of the military, has won more battles than we ever give you credit for.

I recall that a certain large graving dock was completed at the naval base at Pearl Harbor. It was a fine accomplishment, as those of us who have been interested in its progress recognize. But none of us knew how important an accomplishment it was until, exactly 1 week later, Japanese planes swooped out of the west and crippled a major part of our Pacific fleet. Suddenly the new dock became an enormously important part of our naval establishment. Immediately it began receiving damaged ships for repairs which would have required a much longer period to complete had it not been for such a facility. Certainly this dock played a material part in our eventual success in the Pacific war.

Today we are celebrating the completion of another facility which will provide important support to the fleet, and especially to those elements of it which are considered with Construction Battalion operations. When one considers the degree of activity that prevails here even in peacetime, it does not require much imagination to realize how important such a berthing facility as this would be in time of war to the Seabees, and consequently to the Nation.

Such an addition to the Naval Shore Establishment would be an important event in any case. The fact that it will be principally identified with Seabee operations, however, lends further interest to it as far as I am concerned.

I feel a very deep, almost parental, pride in the accomplishments of the construction men. For even if the Seabees were conceived in Washington, D. C., certainly Davisville, R. I., played an important part in their early training.

It was here at Quonset Point that the first advance base depot was established. And it was at that depot that the famous Camp Endicott was established in June 1942. This was the camp where many a man made the transformation from civilian construction worked to Navy Seabee. And it was from this camp that many thousands of these Seabees embarked for distant parts of the earth.

I was extremely interested in these construction battalions because I had had a number of conversations with Adm. Ben Moreell, then Chief of the Bureau of Yards and Docks, concerning the projected units. I had also had a number of talks with the wartime President Franklin D. Roosevelt on the subject. And when additional funds were needed to enlarge the base at Quonset Point for the Seabee training facility, I had had the honor of introducing a bill in the Senate to appropriate a million dollars for the purpose.

I'm sure you can understand then, why I felt proud when I saw these construction men, whose name, "Seabees" had been coined in Rhode Island, and who wore a device designed for them by a Rhode Island artist, embarking from Davisville.

But my pride, and that of all of us here in Rhode Island, increased a hundredfold when the stories began to fly back from those distant points of operation of this new band of men for whom, seemingly, nothing was impossible. For them, it was said, every problem was merely an exercise in ingenuity. Of them it was reproted that their motto, "Construimus, battuimus"—"We build, we fight"—was no empty phrase. While some of them were manning causeways in the landings in Sicily and Europe, the greater number were striding across the Pacific, building the road to Tokyo. It was said that they inspired the Marines they teamed with, astonished their military commanders, and utterly bewildered the Japs with their construction feats. No wonder then, that the public was intrigued with these American master builders, and built in turn a legendary fame around them.

We had other things to be proud of, too, here at Davisville, although most people didn't find out about them until the war ended. It was here at Davisville that the famous pontoon designed by a Civil Engineer Corps officer was tested and developed for a score of uses vital to the war effort. Here, too, the English nissen hut was altered and, as the quonset hut, adapted for use in many sizes and in all kinds of places.

There were even some developments made here at the advance base proving ground which never reached the field of operations. A pontoon floating airfield was one example of these. I suppose this is what some of our more expansive friends mean when they announce that we won the war with something to spare. I fear they are stretching things a bit. At any rate, as you see, Davisville has had a long and happy acquaintance with the Seabees.

We thought this relationship might have ended permanently when the camp was disestablished in 1946 as a Seabee installation. But we were happy when the base was reestablished in 1951 as an advance base depot. And then in 1954 we received the good news

that the installation here was to serve as the east coast construction battalion center. I think I speak for all local residents when I say that we feel the eastern Seabees are now at home where they belong.

I said earlier that the importance of logistics must not be forgotten if we are to build a strong and efficient military. Let me assure you that the work being done by today's Seabees is in the great tradition of their wartime predecessors. The construction battalions have shown that they are a vital part of the Navy and that no matter what the military developments of the future may bring forth, there will always be a need for the skill, the training, and the innate ingenuity of the American construction man.

It is with this feeling of pride in the Navy's construction forces in the past and in the present, and of confidence in their devoted and skillful performance in the future that I dedicate this pier to their success and our country's protection.

Address Delivered by Hon. Ralph W. Yarborough, of Texas, at the Jefferson-Jackson Dinner at Baltimore

EXTENSION OF REMARKS
OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 11, 1958

Mr. YARBOROUGH. Mr. President, I have been requested to have printed in the Appendix of the RECORD my remarks at the 7th annual Jefferson-Jackson Dinner at Baltimore, Md., last Saturday evening, March 8, 1958. This annual Maryland Democratic meeting was sponsored by the Young Democratic Clubs of Maryland. I ask unanimous consent that my Baltimore address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TEXT OF ADDRESS BY UNITED STATES SENATOR RALPH YARBOROUGH, OF TEXAS, FOR DELIVERY BEFORE A MARYLAND STATEWIDE DEMOCRATIC DINNER AT BALTIMORE ON SATURDAY, MARCH 8

Mr. Chairman, fellow Democrats, fellow Americans, it is a rare privilege for a representative of one of the Southwestern States to be a guest here at your own State family meeting, and, representing, as I do, the State of Texas in the United States Senate, I count it an honor to be invited to the State that has sent to the Senate such alltime great Senators as Charles Carroll of Carrollton to the first Senate, and Millard Tydings in our own generation. I am indebted to you for your generous words and hospitable greeting.

It is a particular pleasure to have the opportunity to meet with you young Democrats of Maryland. I always enjoy getting together with young Democrats because you have the fire, the enthusiasm, and, yes, you are the best fighters for the true principles of our party. It is amusing to hear the older, calmer members complaining that "those wild-eyed young Demos are raising sand" about something or other. I say, more power to you. Stir the sand until you blow up a storm.

I'm also happy to see many senior Democrats here tonight. Someone whispered to me to be careful what I said, that in this audience you had every variety of Democrat known to man. That doesn't worry me. When I hear of factional fights among loyal Democrats, I'm reminded of that famous quip of Will Rogers.

He said he wasn't a member of any organized political party, that he was a Democrat. There's some truth in that. The time I'll start worrying about our party is when all of its factions begin agreeing on everything. After all, the Mason-Dixon line is a land boundary, not a party line.

Of course, I understand that your fight here in Maryland is quite differen from ours in Texas. You know that for the past several years we Texans have been plagued with people who are half Democrat and half Republican. They filed as candidates under the party labels of both parties—crossfiled, they call it down there—and run on both party tickets as both Democrat and Republican. Some call them "Demicans," others call them "Republicrats."

I don't know whether you have seen this hybrid political animal. He has a Republican elephant trunk and a Democratic donkey tail, making a rather odd spectacle. Someone has observed this animal is not of much worth to either party because he can't tell his trunk from his tail. As I say, I hope you are not bothered by any such animals around here.

It is a real thrill to visit here in Maryland, a State so rich in history and tradition, recognized in the beginning as the land of sanctuary because of its determination for freedom of religion. Your forebears were the proud people who committed the first act of open rebellion against England in repudiating the unjust stamp act. It was William Pinkney of Annapolis, who as attorney general prepared the declaration of war against Great Britain in 1812. The founders and forefathers in this State made a tremendous contribution to success in the Revolution and in the War of 1812.

Fifty years later, your people and mine—even to the heart of families—were ripped asunder by the terrible tragedy of Civil War. My first knowledge of Maryland came to me in the little east Texas Piney Woods country town where I grew up. As a boy, I listened to the old men, some of whom were in a company of Hood's Brigade, which was Gen. Robert E. Lee's favorite in the army of northern Virginia. They talked of the terrible ordeal of the fierce fire at Sharpsburg's battle; they spoke of how good the sweet, green corn of Maryland tasted to a starving man; they grieved over Antietam's Field, where 22,000 Americans died in a single hopeless day.

While every American thrills to Baltimore's history and the heroic defense that gave us The Star Spangled Banner, Texas has a peculiar reason for being grateful to Francis Scott Key.

When Sam Houston was hailed up for trial before the House of Representatives of the United States for beating up a Congressman, because the Congressman had slandered him in a speech on the floor, Francis Scott Key, then a prominent Washington lawyer, came to Houston's defense. Houston's fortunes were then at a low ebb. Separated from his wife, he fled the governorship of Tennessee to live with the Cherokees. Key won an acquittal for Houston, who then went to Texas.

Houston later said that at the time of the trial he was in the depths of despondency. His life seemed utter failure. Had he been taken in a justice court and fined as a common criminal, it would have ended him. But the trial was a triumph for Houston on a national scale. He felt like a new man; the burden of misfortunes seemed to end with that acquittal, and he went forth a new man to the greatest days of his life.

So tonight I give thanks to Baltimore. Francis Scott Key has lighted the fires of hope in many hearts over the years, but none that meant so much to us in Texas as the hope he stirred up in Sam Houston. That hope became San Jacinto, the Lone Star Republic, and finally annexation.

History, to me, is interesting, enlightening, and inspiring. Historians tell us that the real value of history is to give us a better understanding of the present, because history repeats itself. With this thought in mind, I want you to consider how this country's economy appears to be in danger right now; its economic history of 25 years ago is trying to repeat itself. Certainly, if the high interest rate, tight credit, hard money policies of the administration are not curbed the Republican record of 1929 will repeat itself.

I'm not an alarmist, but I'm a realist. Over 5 million Americans walk the streets out of work, and unemployment figures are still climbing. Nearly 50,000 men and women here in Maryland are out of work. Across the Nation 7½ percent of the labor force under Federal unemployment insurance is without work. In my State alone, 106,000 men, women, and children are now receiving food relief supplies.

Small business bankruptcies are at an alltime high; farm income has been constantly cut under Bensonized policies and thousands of small farmers have been moved off their land into cities where they add to the unemployment crisis.

Under the typical Republican plan, which shows that party's undying love and affection for ultrabig business, the giant combines and cartels grow richer and richer while the people become poorer and poorer.

Prices to the farmers for his products go down, but prices the housewife pays in the market place go up and up.

We have an economic anomaly; an inflation in a recession; an inflation in the price of groceries and goods, and more and more workers are unemployed and unable to buy groceries and goods. And the Chief of State advises the hungry, moneyless, unemployed to end the depression by buying more goods and groceries. Men without money are told to spend; people without food are told to eat more; laborers out of jobs are told to work. In short, a country without a head of state is in a dilemma.

Through it all, this administration has sent out two great and unforgettable statements to the American people. Former Defense Secretary Charles Wilson declared that what's good for General Motors is good for the country. You know, he later returned to the firm which netted over $850 million in clear profits last year. The other remarkable statement came from that great Republican Party spokesman who said the unemployed have the right to suffer. I want to make it clear, here, that that is a right guaranteed only by the Republican Party.

The hard, cold fact of life is that the Republican elephant, which has a shockingly short memory for campaign promises, performs only on command from his special interest trainers. The voice of the people goes unheard. Speaking of Republican campaign promises, I remember how their candidate in 1952 was going to cure inflation. During a whistlestop swing, the Republican speaker illustrated the inflation trouble by taking out a 2-by-4 board and holding it up to the audience saying:

"Here's how much board you could buy for a dollar in 1939."

Then he would take out a hand saw and cut the board in half. He would hold up one piece of the board and say: "And here's how much board you can buy for a dollar now."

The way the cost of living has continued to spiral, I gave some thought to sawing up

a board here tonight to show they didn't keep that promise. But times are getting so tough for Democrats, I couldn't find anyone with a board or who could afford a saw.

But I'll have to admit one thing the Republicans have accomplished. Never, even in the heyday of our Democratic administration, were we Democrats able to keep a full-blown inflation and recession going at the same time. The Republicans have got 5 million people unemployed, and millions of other old-age pensioners and retirees living or rather starving on bare survival incomes, while milk is nearly a dollar a gallon and hamburger meat is 50 cents a pound and more.

The pathetic part of the picture for the people is that this forgetful Republican elephant is tiptoeing around, afraid to act for the people. He's afraid he might make a move which would not please former Secretary of the Treasury Humphrey's bird dogs. It's either that, or else the Republican high command doesn't know what to do.

Well, the Democrats know what to do. We learned from our great leader, Franklin D. Roosevelt. In the most perilous period of our history, he taught the Democratic Party how to fight a depression, find jobs for all the working force, build homes, produce food, and live a good life.

Of course, America is in nothing like the economic chaos this country was in when President Roosevelt's firm hand took the wheel of government. Thanks mainly to the Democratic Party's guidance and its continuing programs, we have strong hope and reason to believe that another nation-breaking depression will never occur. But need we take chances? Five million unemployed is 5 million too many. This is no time for Ferdinand to sit around and sniff the flowers: This is the time to charge. You know some of the current Republican statements run very much like this:

"Any lack of confidence in the economic future or the basic strength of business in the United States is foolish." But that is not a current Republican quote. It was made by President Hoover in 1929. By the end of his administration, 5,000 banks were closed and 13 million people were without work.

We all know how, under the courageous and inspired leadership of President Roosevelt the country built back to sound economic strength. We know that, principally due to his leadership and that of President Harry Truman, our living standards rose to be the highest ever enjoyed by any people in the world. We became the Nation where most families have a car, a refrigerator, a home. But most is not enough.

Jefferson acquired Louisiana Territory, Jackson held the Union together in his day. Roosevelt whipped a depression; Truman contained communism.

Our goal is plenty for all people. Today, in a land of great food surpluses, many hunger. In our land of vast wealth, nearly one-third of our people live in dank, wet, unhealthful shacks. Thousands need for warm clothing. Three basic physical needs of man are food, clothing and shelter. Millions now lack at least 1 of these 3.

As Democrats in the tradition of Presidents Jefferson and Jackson, and Roosevelt and Truman, and others before them, we still face a great challenge. We are still dedicated to fight for a more abundant life for all Americans. We are not the party of pendent pessimism. We know that more jobs and a decent living for millions is many times more important than tight credit for timid lenders.

In a religious society which knows that God notes even the sparrows' fall, we Democrats know that we will never quit fighting as long a child is hungry. While our elderly people end their days in misery and want, we cannot rest. Democrats believe in people; Republicans put their trust in ledger sheets. Our party must always stand and fight for and defend those whom Franklin D. Roosevelt called the forgotten people.

This is no time for timidity or retreat or compromise. This is the time for Democrats of conviction and conscience to stand up for the rights and interests of the average man. By average, I mean that great bulk of Americans of moderate or modest means who constitute the main stream of American life. Following the firm, tried and true principle of fair, honest, concerned government, our party of the people will se the recent tide of Democratic victories grow and spread.

You know the overwhelming Democratic victories of Mayor Robert Wagner of New York; Gov. Robert Meyner of New Jersey. Why, Governor Meyner whipped the whole Republican national administration single handed. His opponent was endorsed by the President, and then Vice President NIXON and three Cabinet members went to New Jersey and campaigned against Governor Meyner, but they couldn't beat him. Of course, the turning tide really came to view last August when the people of Wisconsin elected the very able Senator BILL PROXMIRE. We will elect more Democratic Senators and Congressmen this year, and a Democratic President in 1960.

Maryland has always played a leading role in the main stream of American life. That main stream is running Democratic.

Just how many Democrats we elect will depend on sharp, energetic, farsighted, thinking Democrats like you, for you must take a lead in the fight. I say you should lead the fight because you young men and women can organize the precincts, knock on doors, get out the vote, and tell the people where we stand. All of us—working for a Democratic administration with a goal of plenty for all people—can win. We can win right here in Maryland, too, just like we can win across the Nation. I know that when the firing starts the young Democrats of Maryland will be right up there on the firing line, and I'll predict right now that you'll give a good account of yourselves.

The party of Jefferson and Jackson, of Wilson and Roosevelt and Truman is being called back to power by the people. Maryland, my Maryland. Hear that call.

Heed the call to greatness. You gave the land to the whole Nation for the Nation's Capitol. Now give your full measure of leadership in men to match the land you gave. That is Maryland's just place in history.

God bless you all.

Salute to General Motors and Its Anderson Divisions on the Occasion of Its Golden Milestone Anniversary

EXTENSION OF REMARKS

OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 26, 1958

Mr. BEAMER. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an address given by Robert J. Beck for and on behalf of the Indiana Chamber of Commerce in the salute to General Motors and its Anderson divisions on the occasion of its golden milestone anniversary.

This address was delivered on Thursday, March 6, and I had the privilege of attending this special occasion as one of the guests. Mr. Beck has shown the value of the free-enterprise system and the results of community efforts as exemplified by the General Motors' plants in their community.

SALUTE TO GENERAL MOTORS AND ITS ANDERSON DIVISIONS ON THE OCCASION OF ITS GOLDEN MILESTONE ANNIVERSARY BY ROBERT J. BECK

Distinguished guests, kind hearts and gentle people of Anderson, Mr. Skinner, our chamber of commerce welcomes you to Anderson.

This 50th anniversary has meant for you, we are sure, a great many celebrations like this one. You have traveled here, there, and yon, and on every occasion you have heard the same. I doubt, though, that on any evening you have been exposed to more sincerity than is present here tonight.

Your appearance in our town always acts as a breath from the outside world for we are, when measured by the length and breadth of the General Motors domain, a small and provincial community. If you will use the next few minutes to regard us so, we should like to tell you how we feel toward the great corporation you represent and, if you please, toward our fellow citizens, your employees, through whom we have come to know General Motors policies. We feel nostalgic.

I have been in Anderson only 26 years. But in this space of time I have come to know many oldtimers who, if they had my assignment this evening, could go back, way back, to the very beginning of General Motors in Anderson.

I see some of these people here tonight. People who, in 1918, were driving with pride local products like the Nyberg, the Dolly Madison, the De Tamble, and the Lambert. People who knew the Remy brothers; people who lived through the formation of the romantic, if costly, industrial empire, making of Stoughton Fletcher and W. C. Durant. People who worked with, or for, J. D. Mooney, I. J. Reuter, C. E. Wilson, and later, F. S. Kimmerling.

If these oldtimers were turned loose here tonight, the air would be filled with stories of rugged individualism in a background of colorful industrial romanticism. It would thrill us all to hear of the hurdles jumped, the impossibilities accomplished; but the thing that would impress us most would be the informal and easy way the oldtimers referred to these men—their friends—as "J. D.," "I. J.," "C. E.," and "Fred."

These first-name references, if you heard them uttered, would leave you, as they have me, with the impression of genuine comradeship. These are not facetious nicknames. They carry no implication of disrespect. They are terms of admiration, of high regard and endearment.

This fact, ordinary as it may seem, is significant. It is evidence of sincere and rich communicaiton. It represents a web of community relations which, when measured fairly, is the reason for General Motors' success in Anderson, and Anderson's successful growth as a Hoosier town.

Bees accomplish nothing save as they work together. Neither do men.

This is the high-level pattern of General Motors policy that we have come to know. It is what fills this room tonight with people who knew Fred Kroeger as Fred, Frank Prescott as Frank, O. V. Badgley as Ollie; who knew Frank Burke as Frank, and knew H. D. Dawson as Hi.

Every honest trade has its noblemen. We in Anderson have been blessed in the past with some of the noblest men in the auto trade.

Therefore, we can but feel nostalgic here tonight as we look back over the 40 years since Remy Electric began its career with General Motors, and over the 28 years since

Guide Lamp came down from Cleveland. We are inexpressibly grateful.

Grateful to you, sir, and to your predecessors in the policy direction of the GM accessory divisions in Anderson.

By its continuity of purpose, by its prudent management, by its helping hand, General Motors has sculptured an image of all-round good citizenship in our community which has set Anderson apart from most other smokestack towns.

Way back there somewhere up where you live said to somebody down where we live, "Let's go. Here is what you should have to make it better for everybody. We'll help you get it. But, let's go."

There was a man in my shop the other day who joined Delco in 1924, in the days of C. E. Wilson. He was hired with his stable of 28 mules to raze the old dilapidated orphans' home just south of the railroad tracks on Columbus Avenue and to help with the dirt and mortar in the construction of plant 4. He was hired in 1924 and retired in 1950. I said to him:

"Jim, what makes these General Motors divisions here in Anderson click?"

"Why, Mr. Beck," he said, "that's easy. It's the way everybody up above helps everybody down below. It's the way the boss solicits your ideas and the way he encourages your initiative. I can see C. E. now, as though it were yesterday. I'd be out knockin' my mules and my drivers around and he'd come up and say, 'Jim, what do you need today?' I'd tell him and he'd say, 'I'll see that you get it.' And he would. And before he'd take off, he'd say, 'Got any ideas, Jim?' If I had any that were worth a damn he'd use them. That way, between us, we got the job done. That's the way it was then. That's the way it's been ever since."

That spirit of accomplishment through the use of team play, as all of us here tonight know, has spilled over and inundated our town.

Every enterprise for good in this community has felt the impact of the fine citizens on your payroll, Mr. Skinner. Their contribution to our churches, to our Community Chest, the Red Cross, the YMCA, our Boy Scouts and Girl Scouts, our YWCA, our good government organization, our proposed airport and new hospital, our PTA groups, our college, and our chamber of commerce has, believe me, been beyond the call of duty.

And when I say "contribution," I mean sacrifice in time and energy with emphasis on details. I mean money. I mean imagination, enthusiasm and real devotion.

And when I say "the people on your payroll," I mean all the solid folk of whom there are thousands who work with their hands and their brains. I mean everybody from your general manager, who sets the pace; to his staff, who implement his ideas; to the plant superintendents and their foremen; to the toolmaker, the diemaker; to the line. It is straight across the board that we feel grateful.

Our people have learned a great deal of good citizenship from the policies of General Motors. We have learned that two heads are better than one. We have learned that there are no freeways to the destination of desire.

The greatest engineering is the engineering of men. It is this priceless attribute of General Motors toward their people and of their people toward their community that I have chosen for emphasis. It is this attribute that we in Anderson have found so beneficial over the years.

I would be remiss, however, if I failed to mention with equal gratitude the economic good that General Motors has brought to Anderson.

We all know (it has been reported in the press) that the payrolls of Delco and Guide in Anderson have been as high as $111 million a year and that, in addition to this stimulant to our economy, millions of dollars are spent annually by Delco and Guide in the purchase of supplies and services from Anderson's smaller industries and business and professional establishments.

It has been said that business is the selfish exploitation of society. There may be those present here tonight who do not subscribe to this cold premise and who prefer to look upon their particular livelihood as one of indispensable service to their fellow men. In either approach, selfish or altruistic, the fact remains that there is one impelling motive that gets us all up and at it every morning. That motive is profit.

For most of us profit stems from volume. Volume stems from purchasing power. In our town, purchasing power stems from General Motors. Let's face it.

We do face it, Mr. Skinner. And we take this occasion to convey our collective gratitude to the General Motors Corp. for keeping the Guide and Delco divisions in Anderson, and for enlarging them here over the years.

There are but a few minutes left to speak of the future. But I must speak of the future. It is part of my assignment. This is, after all, an anniversary, not a funeral.

There are textbooks in my empirical trade that tell you that all industry goes through the same cycles as man: infancy, youth, maturity, and senility. Some great corporations in America give the lie to this theory. General Motors is one of them.

General Motors and convenient, economical transportation are here to stay. I would guess that even if technological progress made the motor car obsolete, even if the scientists made it possible and preferable for us to float through the air, General Motors would manufacture the wings to get us up to the floating stage and back to the ground again.

As we get together here tonight we find ourselves in the midst of a disquieting economy. We find the automobile industry in a sticky state. But we find General Motors just where we would expect to find them, in a fighting mood, out to encourage their segment of the economy by higher transportation standards and better values. In the fight for recovery, their contribution will weigh heavily. It might even turn the trick completely. But if it shouldn't, this great corporation will know how to live with adversity. Their outstanding performance in 1957 when, by cost control and efficient administration, they were able to earn $2.99 per share with production of only 45 percent of the motor vehicle market, as against $3.01 per share in 1956 with production of 50 percent of the motor vehicle market, should answer that question for anyone bold enough to raise it.

There is an old saying in Wall Street that goes like this: "The man who knows what the market is going to do, still has seven payments to make on his car."

The same, of course, could be said of me if I attempted to forecast the future economy of Anderson or, for that matter, the part that the General Motors divisions here will play in that economy. (I couldn't qualify under the adage anyway. My Buick is paid for.)

I can, however, think of two approaches that we may take toward our future. The one is to do nothing about it. This approach is based on the philosophy that the future is hidden even from those who make it.

The other is to do something about it. This approach stems from the philosophy that contends that when we look forward to something we want to come true, we can often make ourselves make it come true.

You may be sure that, of the two, they will take the do-something-about-it approach at Guide and Delco.

How do I know that? I know it because, as I have said, it is the crux of General Motors policy.

I know it, too, because of the men who will make it so, Clarence A. Michel (long known to us as Mike) and Donald A. Boyes (soon to be known to us as Don).

Clarence A. Michel came to us with Guide from Cleveland. He is the brightest name in lights. His engineering accomplishments are the very essence of future progress. He has engineered headlamps since 1919 and each of his accomplishments has given progress to General Motors and to Anderson. He has been general manager of Guide since 1941 and there isn't a man in this room who hasn't felt the impact of his contribution to our community. Under his supervision we find many of our solid citizens like the one I read of just the other day, who was retired from Guide on February 1. This man had given 46 years to General Motors, but what is more significant, 2 of his sons, 1 of his daughters and his 4 sons-in-law are employees of General Motors in Anderson. The article went on to say that this man's family's combined General Motors service totals more than 125 years. The place you have to work in has to be good; the people you work for have to be understanding to bring about that kind of continuous loyalty. Things like that don't just happen—they are planned. With C. A. Michel around we will continue doing what it took to get started. From the progress of his past comes the promise of our future.

Last September 6, most of us passed along a reception line at the country club to meet our newest comer. He was introduced to us as Mr. Boyes. It was then like a wedding party during the first passing of champagne. And now, 6 months later, here we are smack dab in the middle of 2 major community problems, the construction of much-needed hospital facilities and a much-needed airport. And who is working at our side? Don Boyes, of course. He is following in the footsteps of his predecessors—he is following the General Motors' policy of good citizenship, that has been so apparent in Anderson for nearly 40 years. As general manager of the Delco division, he shall be our friend and we shall be his friend and accept his counsel. His accomplishments, like those of Mike's, are a symposium of successful engineering— engineering of product and men as well. With Don Boyes around we shall continue doing what it took to get started.

From the progress of his past will come the promise of our future.

George Bernard Shaw once said, "We are made wise not by the recollection of the past, but by the responsibilities of the future."

We are sure, Mr. Skinner, that no good future will come out of cowardice. We expect no cowardice from General Motors. You need expect none from us.

We promise to try to keep General Motors' residence in Anderson clean and in good repair. We promise to keep it well policed and well lighted. We know that youth, bashful or bold, will make us seniors very unnecessary in the future. To this end we dedicate our efforts in behalf of good schools and healthful recreation. We shall try, Mr. Skinner, to make Anderson a place where General Motors can stay and grow, a place to which Detroit may point with pride.

Please convey our sincere felicitations to General Motors on this its golden milestone anniversary. May the good Lord bless you, sir, and all of your associates.

A New World Bank for Backward Areas Makes Sense

EXTENSION OF REMARKS
OF
HON. THEODORE FRANCIS GREEN
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, March 11, 1958

Mr. GREEN. Mr. President, I present for the Appendix of the RECORD an editorial entitled "A New World Bank for Backward Areas Makes Sense," which appeared in the Providence Journal of Saturday, March 8.

This editorial, commending the Senator from Oklahoma [Mr. MONRONEY] for his proposal for an international bank which could lend at lower rates and with less security than the present World Bank, I believe will be of interest to the Members of the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A NEW WORLD BANK FOR BACKWARD AREAS MAKES SENSE

The proposal of Senator MIKE MONRONEY of Oklahoma to establish an international bank which could lend at lower rates and with less security than the present World Bank deserves serious consideration.

Since World War II, the United States has borne the heavy responsibility of financing the needs of both industrially mature and economically backward nations. The Marshall plan met the urgent fiscal and industrial needs of war-battered countries, and it saved vital areas of the free world from Communist penetration.

The Marshall plan well achieved its purpose. But after that objective had been accomplished, other far-flung areas of the world were dependent on American economic aid. Through the years, by outright financial grants, sales of commodities for foreign currencies, and loans made at low interest rates on doubtful security, this country has kept strategic regions of the world in the camp of the free nations.

If Mr. MONRONEY's concept could be translated into concrete action by the United States and the other 59 countries that are members of the World Bank, it might successfully substitute concerted aid to needy areas by 60 nations for their present almost sole dependence on various forms of American financial and economic assistance. Such action might lift a considerable burden from the shoulders of American taxpayers and end a situation wherein recipient nations are self-stigmatized as objects of our charity. They could receive their aid in the form of commercial loans from a firmly established international source.

Some doubt naturally exists as to whether all the member nations of the present World Bank would be able now to furnish their share of the capital of the proposed new institution. In some cases, possibly including even such principal countries as Great Britain, hard currencies are not readily available. They must be conserved for essential national purposes. Presumably this is one of the more difficult problems which Mr. MONRONEY himself has indicated remain to be resolved.

Mr. MONRONEY suggests that this second World Bank should start with a capitalization of a billion dollars. The United States would furnish 30 percent of this amount. The remainder, in varying proportions, would be supplied by the other 59 member countries of the existing World Bank. To serve its intended purpose, loans made by this new institution would bear low interest rates and would be offered on less rigid and secure terms than the charter of the existing World Bank permits.

The proposed new bank, therefore, would not replace the present bank. In some circumstances the new institution would assume entire responsibility for financing the demonstrated needs of an economically backward area. In other circumstances it might supplement an initial loan made by the present World Bank. In such conditions it would function as a sort of second-mortgage institution, assuming all the risks that such financing implies.

The Monroney proposal might relieve this country of a large part, if, indeed, not all, of its present wisely assumed responsibility to furnish foreign aid. Further, it could help in very substantial degree to cover deficits of foreign countries in their trade with us. Last year we sold these countries goods in a total amount that exceeded their combined sales to us by nearly $9 billion.

This immense deficit must be covered by some means. Unless a foreign nation has adequate export credits in its trade with countries other than the United States, it must borrow from some source. The rub comes when a nation, beset by unfavorable internal economic conditions, cannot readily borrow abroad.

The international institution proposed by Mr. Monroney is designed to accommodate such a needy nation. In so doing it would not only serve that nation, but its service would be of inestimable benefit to the rest of the free world, including particularly the United States.

Recession Remedies

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 11, 1958

Mr. MANSFIELD. Mr. President, the official unemployment figures for February have just been released. They total 5,173,000, a 16-year high.

It is obvious that the situation calls for action. Fortunately, the congressional leadership has already outlined a program which would make a start toward putting people back to work.

On March 9, the Washington Star, one of our most responsible and respected newspapers, editorialized on the program advanced by Senate Majority Leader LYNDON B. JOHNSON. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Star of March 9, 1958]

RECESSION REMEDIES

The Government is expected to announce on Tuesday that unemployment rose by some 600,000 in February, bringing the jobless total to at least 5.1 million. Percentagewise, this is far below the depression peak. It is the highest unemployment total in 16 years, however, and determined counteraction is clearly indicated.

Presumably, the administration will reveal its program for dealing with the situation within the next few days. Meanwhile, Majority Leader LYNDON JOHNSON has made two recommendations which strike us as being eminently sensible.

One is that every effort be made to accelerate civil and military construction programs for which funds have already been authorized and appropriated. The second is that we begin at once to plan a well-considered program of public works—a program to be brought into play if the recession, or depression, or whatever one may wish to call it, gets worse instead of better.

Senator JOHNSON has not advanced these recommendations in any spirit of panic. Nor, in our opinion, was he motivated by considerations of personal or partisan politics. He was unwilling at this time, for example, to endorse pleas for a tax cut, although there is little doubt that this would be a politically popular thing to do. His objective, apparently, is to initiate a program of action which will help the economy pull out of the prevailing slump, lay a sound foundation for more vigorous action if the economic situation continues to slide, and, meanwhile, to discourage extreme remedies which do not seem justified by the facts available today. All of this strikes us as being a manifestation of constructive opposition leadership in the Senate.

The People Must Speak

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Tuesday, March 11, 1958

Mr. STENNIS. Mr. President, in a recent issue of the New Age there appeared a Constitutional Day message, entitled "The People Must Speak," by the Honorable Luther A. Smith, sovereign grand commander, Ancient and Accepted Scottish Rite of Freemasonry, Southern Jurisdiction, United States of America.

I think this statement deserves the special attention of the Members of the Congress and the people of the Nation, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GRAND COMMANDER'S MESSAGE

THE PEOPLE MUST SPEAK

We are preparing to celebrated on September 17 the 170th birthday of the Constitution of the United States, which is an appropriate occasion for "We the People" to give serious thought to a grave problem which confronts us, and which we alone can solve satisfactorily. Strangely enough, the problem is a constitutional one. Do I hear the suggestion that such matters are settled only in Washington? Well, that is an erroneous idea. It is quite true that the Capital is full of those who have been selected or elected to look after the interests of the people—the President, the Congress, and the Judiciary and many others—but they are confused and frustrated while the problem gets bigger and bigger. They have lost the way. The ancient landmarks of the Founding Fathers have been removed.

The Constitution was written in the language of the people and they had no trouble in understanding its meaning and needed neither lawyer or judge to explain its provisions. In fact, they did not require the Supreme Court judges to be lawyers. The meaning of the basic law was so obvious

that businessmen, farmers, and merchants could be judges. The Constitution is the people's document, and they know its true meaning and the theory upon which the government was founded. Otherwise, they would never have approved it.

It established an equilibrium of power between the Federal and State Governments, and the formula they used is the sign of the genius of its founders and the secret of its successful operation for a century and a quarter. They were jealous of the rights and privileges of the States and fearful of the power of a central government. They granted to it only such powers as were necessary for it to be a self-respecting, independent nation and to enable it to guarantee free commercial intercourse and communication between the States, also to coin and issue money and grant patents. It was very clearly specified that the powers not specially granted to the Federal Government were retained and held by the States or the people. The central government could not meddle in the domestic affairs of the several States; thus, the individual liberty of the people was secured, which was the primary purpose of the Constitution.

But, largely because of the two world wars, the Federal Government has become a colossus of power and authority over the people, and through gradual encroachments the States are losing to it control over their internal affairs. In many areas of business the Federal Government is competing with its citizens, and its heavy tax assessments are gradually destroying the incentive to private enterprise. Millions of able-bodied citizens possessed of valuable skills are being forced out of business, government, industry, and commerce, and are being supported by funds derived directly or indirectly from taxation. Because of this, irreparable damage is being done to self-respect, thrift, and independence, and therefore to the basic principle of our liberty.

The tentacles of the Federal octopus of power are reaching into the vitals of the American way of life to weaken and perhaps destroy it. The massive force of the people alone can cause a reversal of the vicious trend toward the consolidation of all political and economic power in the government in Washington. But they must speak with a mighty voice calling for a disgorging of the usurped authority by the Federal Government and the restoration of all the old constitutional landmarks and equilibrium of powers fixed by our forefathers. Constitution Day is an auspicious time for the people to make a heroic start. It is their Constitution and the officials in Washington are their servants and will react quickly if they are made to understad that the people mean business. Let the people speak.

LUTHER A. SMITH, 33°,
Sovereign Grand Commander.
SEPTEMBER 1957.

Meader Attacks Rule on Secrets

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, March 11, 1958

Mr. PROXMIRE. Mr. President, one of the most dangerous developments of the period after World War II has been the growing secrecy in the conduct of Government. Every one of us knows how the tendency to classify everything forces recourse to new classifications to cover those few items that really must remain secret. But perhaps the most sweeping claim for secrecy in Government yet made was advanced last week by Attorney General Rogers who said before a committee of the Senate that the President can withhold information from Congress whenever he decides the public interest requires it.

This absolute discretion on the part of the President was flatly denied by Representative GEORGE MEADER, Republican, of Michigan, on the floor of the House of Representatives. Mr. MEADER is quite right, in my opinion, in calling the inherent power of executive privilege claimed by the Attorney General a nonexistent, imaginary thing.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an account of this exchange over a fundamental question which appeared in the Washington Post and Times Herald this morning under the heading "MEADER Attacks Rule on Secrets."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MEADER ATTACKS RULE ON SECRETS

A Republican Congressman yesterday urged Congress to strike down Attorney General William P. Rogers' assertion that the President can withhold information from Congress whenever he decides the public interest requires it.

Rogers told the Senate Constitutional Rights Subcommittee last week that the President has an inherent power of executive privilege derived from the doctrine of separation of powers. This has been often exercised but never tested in court.

Representative GEORGE MEADER, Republican, of Michigan, like Rogers a former counsel to a Senate investigating committee, told the House Congress would destroy itself if it let the administration get away with the idea that it could tell Congress only what it wished to.

MEADER called executive privilege a "nonexistent, imaginary" thing which appears nowhere in the Constitution, in court decisions, or in law. He conceded there "may be a limit" to the power of Congress to investigate the executive branch. But he isn't prepared to admit it until the courts so rule.

Meanwhile, said MEADER, Congress should show "forbearance" in demanding information in sensitive areas like national security and diplomacy. But Congress should press for information needed to legislate effectively, he said.

If the executive branch can tell Congress only what it wants, said MEADER, the executive will "become the master, not the servant, of the people." He said Rogers' thesis gives the executive power to withhold all information from the elected representatives of the people, or to tell them only that part of the "total picture which the executive wants the public or the Congress to know."

This, said MEADER, permits a "rigged, distorted, slanted" foundation for forming public opinion and gives the executive a "greater power over policymaking than is healthy." It would reduce Congressmen to "figureheads," he said.

Rogers had cited actions of Presidents from Washington on in withholding information as precedents in establishing the principle of executive privilege. That can work both ways, said MEADER. He cited instances where Congress had demanded information from the Executive and got it at the point of a subpena.

MEADER said that while Rogers was counsel to the Senate subcommittee investigating 5 percenters and other matters the subcommittee subpenaed executive branch information and wrote a strong report insisting on the right of Congress to get it.

"Curious things seem to happen to individuals when they move from one end of Pennsylvania Avenue to the other," said MEADER.

Rogers' answer to that last week was that when he was a Senate investigator he had wanted to challenge the executive privilege principle in Court—until he did research on the law and decided he didn't have a leg to stand on.

MEADER told the House he believed Congress could legally enact a law requiring every agency it had created to give Congress every document and bit of information it possessed. This would apply to every executive agency except the Presidency. MEADER said it would apply to the important constitutional powers of the President—such as those to execute the laws, command the Armed Forces, and conduct diplomatic relations.

MEADER also conceded that Congress probably could not overrule a decision of the President within his constitutional area. But there are sound reasons, he said, for Congress to know why and how the decision was reached. "It is difficult to see how mere knowledge of the facts * * * could constitute legislative invasion of the executive power."

The main job of Congress is to form public policy and deal with operating problems of Government, said MEADER. Its capacity to legislate intelligently is undermined to the extent that its power to learn the facts is impaired, he said. "By asserting an executive privilege to deny to Congress facts and information which Congress believes is to attack the legislative power itself."

A bill to knock one prop from under Government secrecy is waiting action on the House floor. It would not touch the inherent power of executive privilege. It says simply that a 1789 Government housekeeping act, often cited by departments in withholding information from the public, does not authorize secrecy.

Morals Along the Potomac

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, March 11, 1958

Mr. MORSE. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an editorial entitled "Morals Along the Potomac," from the Los Angeles Evening Mirror News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Los Angeles Evening Mirror News of March 5, 1958]

MORALS ALONG THE POTOMAC

Resignation under fire of FCC Commissioner Richard Mack highlights a condition that infects both political parties in Washington.

Mack happens to be a Florida Democrat appointed by a Republican administration. But the situation for which he has—rightly or wrongly—become a symbol has existed for generations.

And it undermines the whole concept of political morality.

Mack wrote President Eisenhower that his conscience was clear. He said he saw nothing wrong in his actions—which included taking nonrepayable loans and stock interests in business from a politico interested in affairs before Mack for decision.

Under the prevailing code of operating before Federal regulatory commissions, this seems to be accepted practice. Commission members are wined, dined, and gifted by interests with an ax to grind, and apparently it's considered part of the job.

These flexible conscience boys are an old Washington phenomenon. They were the spoilsmen of Andy Jackson's day, and the 5-percenters of a more recent regime.

The public interest takes an awful beating when such amoral types are in positions of power. You can almost imagine a surprised official of the Mack persuasion saying, "Why, what's the public interest?"

The present problem of the regulatory agencies is simple. They can make awards which mean millions of dollars to those who get the awards.

An exclusive right to operate a TV station in a thriving town is worth millions. A franchise to operate an airline on a fat route is also a seven-figure prize.

When such licenses are up for grabs, it's small wonder that members of the awarding commission get the sweetheart treatment from those who want the licenses and franchises.

Is reform possible?

By law, the regulatory agencies perform (or should) quasi-judicial functions. They hear evidence and make awards of licenses (or should) on the basis of merit and the public interest.

Yet these quasi-judges admit accepting loans, gifts, favors, and luxury vacations from those who have matters before the commissions.

Any Federal judge who accepted such cheap windfalls would be instantly disgraced, and rightly so.

The Federal judiciary—praise be—has a tradition of incorruptible integrity.

MATTER OF ETHICS

Legal ethics make it a gross indiscretion for a litigant even to speak to a judge, except in the presence of opposing counsel, while any matter is before the court.

Contrast that with the lack of ethical standards that permits a member of a regulatory commission to become the gift-showered "sweetheart" of anyone seeking an award.

Incidentally, there's also a 15-year prison term, plus a 20,000 fine, waiting for anyone who seeks to influence a Federal judge.

Here's the germ of an idea for reform of the regulatory agencies. If the will is there, Congress could speedily correct this degenerating system, instead of getting periodically indignant when things begin to smell out loud.

Top members of regulatory agencies should be given judicial status, and made subject to the same rigid ethical codes, as Federal judges. (We already have special Federal courts for hearing tariff appeals, with judicial status for the hearing officers.)

Any franchise applicant who attempted the wine-dine-gift routine with a member of the special regulatory judiciary would be subject to the same stern penalties as a litigant who tried to play footsie with a Federal judge.

Such simple legislation would end the recurrent spectacle of venal huckstering in the high places of Government. It is a reform of our quasi-judicial agencies that is long overdue.

Confusion Compounded

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 11, 1958

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include an interesting article Confusion Compounded, whitten by Marguerite Higgins, and appearing in the Boston Globe of March 6, 1958.

The closing paragraph of the article is a pointed observation in the form of a question. "Is it too much to ask that the men around the President be as versed in the facts about modern communism as they are about modern Republicanism?"

CONFUSION COMPOUNDED

(By Marguerite Higgins)

WASHINGTON.—Somebody is giving President Eisenhower incredibly bad advice on the state of affairs inside the Soviet Union in at least one crucial matter: The question of who leads Soviet thought and what constitutes an influential Soviet citizen.

So puzzling have been the President's recent pronouncements that it has startled Washington into musing whether the workings of the Soviet system are really comprehended at the top levels of the Government.

This disturbing train of questioning grew out of the President's latest letter to Soviet Prime Minister Bulganin in which Mr. Eisenhower said that cultural exchanges between the East and West should not be limited to scientists and technicians but should also include leaders of thought and influential citizens within the Soviet Union.

Just who are these influential citizens and leaders of thought?

At the State Department which was a logical place to ask the question since Secretary of State Dulles drafted the original of the answer to Bulganin, it was acknowledged that this phrase might possibly be construed as a wedge for an invitation to party boss Nikita S. Khrushchev and Bulganin but that the real targets were secondary figures, such as Soviet deputy premiers or the editor of Pravda.

The puzzle got even more puzzling when President Eisenhower went out of his way in a prepared speech at a foreign-aid rally here last week to say that he had only meant nongovernmental Soviet leaders of thought.

His aim was apparently to dispose of the suspicion that he had meant to invite Messrs. Khrushchev and Bulganin for a private Summit meeting—a meeting sure to create much consternation within the western alliance.

This aim was certainly served but left the question of just whom he did have in mind as murky as ever.

The next day at his press conference, the President stated that "It is possible that my wording was not as accurate as I had hoped."

He went on: "I was talking about leaders of thought, and not through the people carrying official responsibility."

Observers here are wondering precisely which nongovernmental and nonofficial personality in the Soviet Union is in a position to influence thought?

A scientist?

But the President already stated that the influential people he had in mind were to be in addition to scientists and technicians.

The editor of Pravda?

The most famous recent editor of Pravda, the Communist Party newspaper, was Dmitri Shepilov, who later became Soviet foreign minister and even later was booted out of his job for antiparty activities.

Even in his Pravda days, Shepilov wouldn't have qualified as nongovernmental or nonofficial because he was at that time an alternate member of the Communist Party Central Committee and a member of the Supreme Soviet (Parliament).

It is also 99 percent sure that virtually every influential Russian holds some official capacity either in the Soviet government or—far more important and far more influential—in the Soviet Communist Party. That goes for editors, factory managers, poets, even for Galina Ulanova, Russia's magnificent prima ballerina. Miss Ulanova, in addition to being an honored member of the Soviet Communist Party, is a member of the Soviet City Council.

The facts are, of course, that there are simply no nonofficial or nongovernmental leaders of Soviet thought extant behind the Iron Curtain.

So under the President's definition there just aren't any Russians who qualify for such exchange visits.

Is it any wonder then that a western diplomat echoing the talk around town, said last week, "How can a country who understands as little as this about the opponent in this terrible struggle presume to lead the rest of us in dealing with the Russians?"

Men like Khrushchev, Foreign Minister Andrei Gromyko, Anastas Mikoyan are hardened professionals in the deadly game of world politics.

You can bet a ruble that they know precisely who constitutes an influential American citizen. The Russians are nothing if not thorough in sizing up a potential enemy.

Is it really too much to ask that the men around the President be as versed in the facts about modern communism as they are about modern Republicanism?

Two Hundred Eleventh Anniversary of the Birth of Count Casimir Pulaski

EXTENSION OF REMARKS
OF
HON. JOHN O. PASTORE
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES

Tuesday, March 11, 1958

Mr. PASTORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the proclamation issued by Gov. Dennis J. Roberts of Rhode Island, in honor of the 211th anniversary of the birth of Count Casimir Pulaski.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

PROCLAMATION: GENERAL PULASKI'S BIRTHDAY ANNIVERSARY

This year marks the 211th anniversary of the birth of Count Casimir Pulaski, one of the patriots a grateful Nation has enshrined in its heart as a selfless man who came from across the seas and aided in the achievement of our independence during the Revolutionary War.

He left his homeland to fight in our cause and who for that cause laid down his life. In the valiant assault upon the city of Savannah at the head of the Pulaski legion of cavalry he received a mortal wound.

He was a distinguished and aristocratic Pole who had achieved the rank of brigadier general before his untimely death at the age of 31 years and he has left to posterity an inspiring example of fidelity to principle which we should cherish and emulate.

And now, therefore, do I, Dennis J. Roberts, Governor of the State of Rhode Island and Providence Plantations, proclaim Tuesday, March 4, 1958, as General Pulaski's Memorial Day, inviting our citizens to attend suitable commemorative ceremonies as a mark of respect to the memory of this father of American cavalry.

In testimony hereof, I have hereunto set my hand and caused the seal of the State to be affixed this 24th day of February, in the year of our Lord 1958, and of independence, the 182d.

DENNIS J. ROBERTS, *Governor.*

By the Governor:

JOHN A. NOTTE, Jr.,
Secretary of State.

Vital Work of the Civic Committee of the People-to-People Program

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, March 11, 1958

Mr. WILEY. Mr. President, I send to the desk a summary of the fine work of another of the many committees comprising the people-to-people program.

This particular group is the civic committee, consisting of leading municipal officials and other prominent citizens in numerous American communities which are solidifying their ties with foreign communities.

Hosts at the Washington get-together were many of our top officials. And in turn, host for the District area itself was the able President of the Board of Commissioners, the Honorable Robert McLaughlin, who has always been especially active in contributing to improved international relations, in addition to his fine work on the local scene.

I ask unanimous consent that the text of the release describing the meeting of the civic committee and a list of the participants be printed in the Appendix of the RECORD.

There being no objection, the release and list were ordered to be printed in the RECORD, as follows:

JOINT MEETING, CIVIC COMMITTEE, PEOPLE-TO-PEOPLE PROGRAM, AND COMMITTEE ON INTERNATIONAL COOPERATION, AMERICAN MUNICIPAL ASSOCIATION

WASHINGTON, February 25.—Prominent citizens including mayors and city managers of some 30 municipalities will meet here Thursday and Friday, February 27-28, to discuss the role America's cities can play in the people-to-people program.

The civic committee of the people-to-people program, headed by Mark Bortman, chairman of the Boston National Historic Sites Commission, and the American Municipal Association's Committee on International Municipal Cooperation, headed by Robert E. McLaughlin, President of the Board of Commissioners, District of Columbia, are cooperating in town affiliation activities. This is one of the people-to-people projects designed to bring closer together American communities with cities in other parts of the world.

The forthcoming meetings will be primarily concerned with formal organization and discussion of measures to facilitate and expand action on a municipal level, and program action now underway.

Among the speakers at the sessions in the international conference suite, 1776 Pennsylvania Avenue, will be Commissioner McLaughlin, George V. Allen, Director of the United States Information Agency, and Chief Justice Robert G. Simmons, of the Nebraska Supreme Court. The chief justice will speak on Overall Objectives of the People-to-People Program. Al Capp, chairman of the cartoonist's committee, will speak at a luncheon on Thursday.

Vice President RICHARD M. NIXON will address a luncheon gathering at the Sheraton-Carlton Hotel at 12:15 p. m. Friday.

Among the cities to be represented at the meetings here Thursday and Friday are the following, which are affiliated with cities in other nations:

Coral Gables, Fla.; Cartegena, Colombia; Savannah, Ga.; Guatemala; Montclair, N. J.; Graz, Austria; Western Springs, Ill.; Rugely, England; York, Pa.; Arles, France; Lexington, Ky.; Deauville, France; Dallas, Tex.; Dijon, France; Louisville, Ky.; Montpellier, France; Worthington, Minn.; Crailsheim, Germany; Hagerstown, Md.; Wesel, Germany; Detroit, Mich.; Rotterdam, Holland; Columbus, Ohio; Genoa, Italy; Boston, Mass.; Rome, Italy; San Jose, Calif.; Okayama, Japan; San Francisco, Calif.; Osaka, Japan; San Diego, Calif.; Yokohama, Japan.

AGENDA

February 27

9:30 a. m.: Invocation, the Very Reverend Monsignor Francis J. Lally, editor, The Pilot.

9:35 a. m.: Meeting open, Mark Bortman, chairman, Civic Committee.

9:40 a. m.: Welcome to Washington, the Honorable Robert E. McLaughlin, president, Board of Commissioners, Washington, D. C.

9:50 a. m.: People-to-people film, President Eisenhower.

10:25 a. m.: Overall objectives of the people-to-people program, speech by the chief justice, Supreme Court of Nebraska, the Honorable Robert G. Simmons.

11 a. m.: Forum, Mr. H. Price Webb, director, Department of Adult Education, San Jose, Calif.

1 p. m.: Lunch at the Sheraton-Carlton Hotel.

1:30 p. m.: Speaker, Al Capp, chairman of cartoonists committee.

2 p. m.: Return to international conference suite.

2:15 p. m.: Speech, Ambassador George V. Allen, director, United States Information Agency.

2:35 p. m.: Extent of present international programs carried on at the community level. Open discussion chaired by Mayor Charles Dail, San Diego, Calif., and Mayor Winslow F. Burhans, Hagerstown, Md.

5 p. m.: Session adjourned.

February 28

10 a. m.: Determination of future activities:

1. Program objectives.
2. Structural organization.
3. Financing.

12:15 p. m.: Luncheon at the Sheraton-Carlton Hotel. Address by Vice President of the United States, RICHARD M. NIXON.

2 p. m.: Adjournment.

Following is a list of those who will attend the meetings at the International Conference Suite, 1776 Pennsylvania Avenue:

Edwin H. Armstrong, 1704 North Main Street, Santa Ana, Calif.

Miss Catherine L. Beachley, board of education, Hagerstown, Md.

Daniel Bloomfield, 80 Federal Street, Boston, Mass.

Mark Bortman, 183 Essex Street, Boston, Mass.

James Boyce, Associates for International Research, 8 Eliot Street, Cambridge, Mass.

Frederick W. Brittan, International Latex Corp., Dover, Del.

Dr. George Brodschi, director, international center, University of Louisville, Louisville, Ky.

Joel I. Brooke, Elmo Roper & Associates, 30 Rockefeller Plaza, New York, N. Y.

John D. Brown, City Greeter, City Hall, Boston, Mass.

Mayor Winslow F. Burhans, Hagerstown, Md.

Thomas J. Carty, Stone's Express, 144 Second Street, Cambridge, Mass.

Mrs. Phyllis Case, 225 Bay State Road, Boston, Mass.

Mrs. Theodora Cashel, 1011 Sixth Avenue, Worthington, Minn.

Earle Cocke, Jr., Delta Air Lines, Inc., Atlanta, Ga.

H. Walton Cloke, coordinator of public relations, Daiser Industry, 1625 I Street NW., Washington, D. C.

Phillips Davies, Esq., Russ Building, San Francisco, Calif.

Mayor Charles Dail, San Diego, Calif.

Rev. John Vedder Edwards, National Presbyterian Church, Washington, D. C.

Dr. Leon H. Fradkin, 501 Bloomfield Avenue, Montclair, N. J.

Rabbi Moses N. Friedman, 145 West Cottage Place, York, Pa.

Sterling Fisher, director, public relations, Reader's Digest, Pleasantville, N. Y.

Thomas Y. Gorman, WEEI, 182 Tremont Street, Boston, Mass.

H. DeForest Hardinge, Hardinge Co., Inc., 240 Arch Street, York, Pa.

Patrick Healy, Jr., executive director, American Municipal Association, 1624 H Street NW., Washington, D. C.

H. H. Hillyer, president, South Atlantic Gas Co., Savannah, Ga.

Mayor Dale H. Heinly, Santa Ana, Calif.

Mrs. Ellen Harris, Denver, Colo.

Parker James, John Donnely & Sons, 3134 Washington Street, Roxbury, Mass.

Roger Kennedy, Dallas Council on World Affairs, 2419 Maple Avenue, Dallas, Tex.

The Honorable David McKendree Key, 2543 Waterside Drive NW., Washington, D. C.

Miss Margaret Mary Kearney, education director, WCAU, Philadelphia, Pa.

Howard G. Knowlton, 4712 Central Avenue, Western Spring, Ill.

Very Rev. Msgr. Francis Lally, The Pilot, 49 Franklin Street, Boston, Mass.

Harry Lindquist, 153 Waverly Place, New York, N. Y.

Thomas H. D. Mahoney, Ph. D., MIT Department of Humanities, Cambridge, Mass.

J. P. Marto, 30 Federal Street, Boston, Mass.

The Honorable Robert E. McLaughlin, president, Board of Commissioners, Washington, D. C.

William McCahill, President's Committee on Employment of Physically Handicapped, United States Department of Labor, Washington, D. C.

Frederic K. Mann, deputy city representative, Philadelphia, Pa.

Robert McNutt, city manager, Harper Woods, Mich.

Miss Eleanor Mitchell, Corcoran Art Gallery, Washington, D. C.

Frank Maria, 23 Adams Street, Lowell, Mass.

Norris Nash, president, Chamber of Commerce, Oakland, Calif.

Mrs. John E. Peters, 590A Orange Circle, Pasadena, Calif.

Mrs. Mary D. Poag, City Beautiful Commission, Second Avenue South and Lindsley, Nashville, Tenn.

Abe S. Rosen, deputy city representative, Philadelphia, Pa.

Miss Dorothy B. Robins, Associates for International Relations, American Association for University Women, 1634 I Street NW., Washington, D. C.

Russell Riley, Director, International Education Exchange Service, State Department, Washington, D. C.

The Honorable Robert G. Simmons, chief justice, Supreme Court of Nebraska, Lincoln, Nebr.

Mayor Russell Smith, Cambridge, Md.

W. Ivor Smith, Port Angeles, Wash.

Dr. Frank M. Snowden, Jr., Howard University, Washington, D. C.

Delmar G. Starkey, general manager, Chamber of Commerce, Columbus, Ohio.

Mrs. Ruth E. Stevens, Office of International Relations, Detroit, Mich.

Mrs. O. J. Sharp, vice president, International Friendship Council, Fresno, Calif.

Woodrow M. Strickler, vice president, University of Louisville, Louisville, Ky.

Mayor Fred A. Schiding, York, Pa.

Charles L. Todd, International Advisory Council, Inc., 45 East 65th Street, New York, N. Y.

Mrs. Muriel Tolle, chairman, San Diego-Yokohama Friendship Committee, San Diego, Calif.

Alderman Martin Schreiber, president, Common Council, City of Milwaukee, Milwaukee, Wis.

Miss Jennie Vimmerstedt, Jamestown Post Journal, Jamestown, N. Y.

John A. Volpe, 54 Eastern Avenue, Malden, Mass.

Charles H. Williston, president, Rosenheim Club, Port Angeles, Wash.

Mayor Ben West, Nashville, Tenn.

Mrs. Carla Williams, 1625 I Street, NW., Washington, D. C.

Mrs. Lyman Wagers, care of office of the mayor, Lexington, Ky.

H. Price Webb, department of adult education, San Jose, Calif.

Ira F. Willard, city manager, city hall, Coral Gables, Fla.

New Library at University of North Dakota

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 11, 1958

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three articles printed on the front page of the Grand Forks Herald of Grand Forks, N. Dak., relating to a million-dollar donation for the university library by the Honorable Chester Fritz. This contribution is considered the largest ever made to the university by a single donor.

As the senior Senator from the State of North Dakota, I am extremely gratified that an alumnus of the University of North Dakota made such a significant contribution and I know that all of the people of the State of North Dakota are most gratified by this event.

Also, I ask unanimous consent to have printed in the Appendix of the RECORD, the article in last Friday's Post by Mr. George E. Sokolsky concerning this gift.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Grand Forks (N. Dak.) Herald of February 15, 1958]

GIFT SAID LARGEST IN STATE—CHESTER FRITZ DONATION IS FOR BUILDING ONLY

A gift of $1 million for a new library building at the University of North Dakota was announced today.

Chester Fritz, international investment banker and former student at the university provided the gift, Dr. George W. Starcher, president of UND, announced.

Starcher said construction of the building will begin next year, with completion set for 1961. The new library will be built on a site between the present library and the law building.

GIFT CALLED LARGEST

"This is one of the greatest things that has happened to the university in its 75-year history," Dr. Starcher said.

The gift is the largest private contribution ever made to an institution of higher education in North Dakota. It was made, Fritz said, in appreciation of what my native State of North Dakota did in furnishing the foundations of my academic education.

The State Board of Higher Education accepted the gift with sincere thanks at its meeting here today. It formally designated the projected building as "the Chester Fritz Library."

PLANNING TO START

Inasmuch as the planning of the library will start this year, the university's diamond anniversary year, Starcher said the structure will long be remembered as "the diamond setting" in the anniversary.

He said the building will be modified Tudor Gothic, in keeping with the university's dominant architectural style, setting a peak of excellence for planning further expansion of the campus.

Fritz specified that the entire million dollar gift be used for the library building itself.

BUILDING GIFT SPECIFIED

"I realize that a university library must also have the necessary books and other facilities for scholarship and research, as well as a functionally planned building, yet my contribution is for the building," Fritz wrote in a letter to Dr. Starcher.

"It is my hope, however, that the State legislature, alumni and other friends of the university will provide sufficient funds to keep the library well stocked with new-book acquisitions, including rare and unusual books of special significance to North Dakota, and with the most pertinent periodicals for the various schools and colleges of the university.

"It is also my hope that these expanded library services will be a help to the State of North Dakota in carrying its share of our recently recognized world responsibilities," Fritz added.

CASH AND SECURITIES

Fritz specified that he would make the gift in cash and securities salable on the New York and/or Canadian stock markets.

In his letter to Dr. Starcher, Fritz said the offer was made in recognition of the important and growing service of the university to the entire State and in the hope that it will enlarge the educational opportunities and the cultural horizons of generations of subsequent students at my alma mater.

"An adequate library tends to raise the level of total scholarship of a university and adds immeasurably to the greatness of the university," he added.

STARCHER AGREES

President Starcher expressed agreement with Fritz' views and said, "The library is the intellectual center of the campus and gives a university much of its claim to distinction.

"The completion of the library will raise the University of North Dakota to a new height of academic prestige among the educational institutions of the Nation."

In a letter of appreciation to Fritz, Starcher said the library "will become a monument to your ideals—not a cold, silent memorial, but a living, growing fountain of knowledge, wisdom and inspiration, made possible by your self-denial, hard work and foresight.

"A realization of the endless service perpetuated through your generosity must be a source of continuous personal satisfaction for you. The Chester Fritz Library will stand for years to come as a guide to the objectives you have always believed in."

GOVERNOR DAVIS HAILS GIFT BY FRITZ

Gov. John E. Davis joined university and board of higher education officials today in hailing the million-dollar gift of Chester Fritz for a new library at the University of North Dakota.

"It is wonderful to learn of this interest in the university of a former student who has made a success of his business ventures and is now sharing part of it with our great university," Davis said. "It is extremely gratifying to know that an alumnus is so interested in the future development of the university that he is making this cultural opportunity available to future citizens of our State. This library will be a lasting tribute to his loyalty to both the university and the State."

Other statements of appreciation:

J. Lloyd Stone, university alumni director: "Many loyal alumni have often mentioned that they feel under obligation to the university for the education they received here. Surely the new Chester Fritz Library will stand as a memorial to one who has paid his debt in measure overflowing so that students in years to come might enjoy finer educational opportunities. This gift will serve as a challenge and an inspiration to alumni in future years."

Durward Balch, Minneapolis, president of the alumni association board of directors: "This gift to build the Chester Fritz Library is deeply appreciated by all of us interested in the university. It is the largest contribution from an alumnus to date, and * * * it is also a recognition that the University of North Dakota is one of this country's fine universities."

Dr. George W. Starcher, University of North Dakota president: "Its exhilarating influence will raise the sights of all of us at the university."

FRITZ LONGTIME SUPPORTER OF UNIVERSITY

Chester Fritz, whose gift of $1 million for a new library building at the University of North Dakota was announced today, has long been a supporter of the university.

Since December 1956, he has contributed more than $100,000 for scholarships. Before that he had contributed approximately $32,000 for other university projects.

The Chester Fritz Scholarship Fund, established in 1956, provides for a gift of $5,000 yearly in perpetuity, providing 6 annual scholarships, with preference given to North Dakota residents.

Born in Buxton, N. Dak., Fritz began his education in a one-room rural school in Traill County. He continued his grade schooling in Fargo and graduated from high school in Lidgerwood in 1908. He then entered the university, studying there for 2 years and completing his work for a baccalaureate degree at the University of Washington.

After graduating from college, Fritz took a position with an American industrial firm, whose business extended across the Pacific, and in 1915 he made his first voyage to the Orient.

Since then he has traveled around the world many times. For 34 years he had headquarters in China. During World War II, when the Japanese moved into China, he was interned in Shanghai and repatriated in 1943.

Since 1928 he has been a member of an investment banking firm having offices in both hemispheres. He and Mrs. Fritz now live in Italy, but he considers North Dakota his home State.

In 1951 the university conferred on Fritz the honorary degree of doctor of laws, in recognition of his special merits as a businessman of personal and professional integrity and for his contribution to international understanding.

He was awarded the University of North Dakota Alumni Association distinguished service citation in June 1957.

[From the Washington Post and Times Herald of March 7, 1958]

THESE DAYS

(By George E. Sokolsky)

AN AMERICAN ABROAD

An item of news will on occasion arouse nostalgic memories of exciting days decades ago. So it was when I read in the Grand Forks Herald that Chester Fritz has given a million dollars to the University of North Dakota for a library. The newspaper account said that this large sum was given "in appreciation of what my native State of North Dakota did in furnishing the foundations of my academic education."

I recall almost to the day when I first met Chester Fritz. He had come to China some years before as a flour salesman for a west-coast firm, but he became interested in foreign exchange and was working for the American Metals Co. This was more than 30 years ago.

Foreign exchange is one of the most interesting and most complicated of human occupations. It is only for professionals; the amateur can sometimes win if he has a stroke of luck, and luck comes only once. To succeed in maintaining a position in foreign exchange one must know about everything that is going on in the world. An error of judgment as to what is likely to occur in 30 days or 90 days can wipe out a fortune. When the world is normal, all export and import houses, all banks, and even governments, engage in foreign exchange because of the phenomenon that currencies do not always have the same value. The buyer and seller of goods in some other country tries to protect himself against loss through exchange fluctuations. Sometimes such fluctuations can be sufficient to wipe out a profit altogether.

So, Chester Fritz, born in Buxton, N. Dak., graduate of the University of Washington, found himself in China in 1924, forced by his job to learn foreign exchange and becoming one of the masters in this field. In due course, he and some Shanghai friends organized the firm of Swan, Culbertson and Fritz. The three partners were very young, very enthusiastic and set out to compete with the large British banking houses then existent in Shanghai. It was not long before they had created an altogether new field of endeavor, arising out of unsettled conditions in China, namely, that rich Chinese were purchasing, through them, huge quantities of American securities and American currency as a means of protecting themselves against an inevitable future.

After an internment during World War II by the Japanese, Fritz began his world travels, searching out all the odd and end spots to make sure that he missed nothing. He finally settled in Rome, returning to the United States at intervals.

I once asked Chester Fritz what he would do with his money. He told me he would leave it all to his native State. He was not married then and I said to myself that someday he would have a family and then he would change his mind. Fritz is married now, but apparently he has not changed his mind.

In many ways, the Horatio Alger story never dies. Chester Fritz, the boy, could not imagine $1 million. Chester Fritz, the man, gives such a sum to a university at which he studied for only 2 years. Here is a success story that is worthy of note in these days when young men seek a security guaranteed by law. Fritz never had any kind of security in his life, every moment of which has been a gamble against historic forces.

Self-effacing, shy, in many ways lonely, Chester Fritz, like the Chinese among whom he lived so long, has built himself a memorial while he still lives.

A Bill To Permit a Child To Continue To Receive Social Security Benefits After Age 18, in Order To Continue His Education

EXTENSION OF REMARKS

OF

HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 11, 1958

Mr. FINO. Mr. Speaker, I am today introducing a bill to allow a child to continue to receive social security benefits after reaching the age of 18 in order that he may continue his education. The 1939 amendments established the important concept that the child of an insured individual who dies or retires is entitled to receive a benefit. The benefit, however, stops at age 18 on the assumption that the child is no longer dependent on his parents at that age.

In the 1956 amendments to the Social Security Act, the Congress recognized that dependency does not necessarily cease at 18 when it provided for the continuation of such benefits after that age in the case of a permanently disabled child who could not be expected to find work. My bill is further recognition of the fact that an arbitrary age line does not meet the needs of modern society. It is clearly in the national interest to provide incentives for our children to continue their education beyond high school. The truth of the matter is that dependency and school attendance go hand in hand.

I therefore propose to continue the social-security benefit in the case of a child who is going to school.

Mr. Speaker, recent events in the field of space satellites and guided missiles, as well as in other fields of scientific progress, have awakened us in the United States to the need for increasing and improving the education of our youth, if we are to maintain our technological and cultural position in the world of the future.

The United States Office of Education stated in a recent publication that "Thousands of America's best young minds—potential scientists, teachers, and leaders in many fields—are foreclosed from college training each year." A study conducted by the educational testing service of Princeton, N. J., indicates that approximately one-half of the top 30 percent of the Nation's high-school graduates do not go to college. Unfortunately, this group includes between 60,000 and 100,000 highly able secondary school graduates with aptitude and interest for college who fail to continue their education solely for financial reasons.

In my own State of New York nearly 22,000 high-school graduates in the upper half of their class failed to go to college in 1953, nearly one-half of whom indicated a desire to go to college.

Mr. Speaker, there are a number of bills now pending before Congress directed toward finding a solution to this difficult problem. My bill, being of somewhat limited scope, is, of course, not intended to supply the answers to the many questions which will be raised by the challenge to our educational system. I believe that it is, however, one simple and logical step toward the solution we are seeking.

Aside from the bearing which the issues of national security may have upon it, I believe that this legislation is justified on its own merits. For we have already approved similar provisions in prior veterans' legislation concerning the benefits of the children of veterans. These provisions are now contained in section 101 of the Veterans' Benefit Act of 1957, under which the child of a veteran may continue to receive benefits after reaching 18 if he is pursuing a course of instruction at an approved educational institution.

An analogy may also be drawn from the definition of a dependent in section 151 (e) of the Internal Revenue Code, under which a taxpayer may claim a child as an exemption if he is 18 years old or younger, or if he is a student, regardless of the income of the child.

Mr. Speaker, the estimated cost of my bill is negligible, being slightly more than one-twentieth of 1 percent of payroll. The bill also contains safeguards against abuse by requiring that a school be properly accredited and by directing that regulations be prescribed to assure regular attendance by the student.

Standing alone, the proposal certainly would not supply any young person with sufficient funds to acquire an education. But it might decide the fate of a great number of youngsters in cases where it would supplement the resources of those who, without it, could not afford to continue their schooling beyond the age of 18.

Improved Methods of Stating Budget Estimates

SPEECH

OF

HON. ALBERT P. MORANO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 5, 1958

Mr. MORANO. Mr. Speaker, I have always been a firm supporter and ad-

vocate of the recommendations of the Hoover Commission.

I believe the legislation now before us is an integral part of the distinguished Commission's recommendations for effecting economy and efficiency in our Government operations.

Regardless of what criticism may be offered, the bill as amended, will at least offer an opportunity to explore an area where some savings can be made.

Actually, the legislation does not limit the power of Congress in the matter of appropriations. It will give both the Congress and the executive branch improved control by requiring that the budget include a limitation on annual accrued expenditures.

I do not believe that any of us in this Chamber have been spared demands of taxpayers for a more business-like system of apportioning and spending their tax dollars.

The legislation which is to be considered—with the Wigglesworth amendment—will do much toward providing the taxpayer with the assurance that he is getting an honest dollar's worth for his tax dollar.

I shall support H. R. 8002 as amended in the interest of improved fiscal procedures in Government and in the interest of efficiency and economy.

The Pacific Northwest and American History

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, March 11, 1958

Mr. NEUBERGER. Mr. President, few realms in our country have a more vivid or illustrious historic background than the Pacific Northwest. For this reason, many residents of my native State of Oregon were disturbed when the noted historian and editor of American Heritage magazine, Mr. Bruce Catton, wrote an article for This Week magazine which listed 30 places where American history was made, but mentioned not one place in the Pacific Northwest.

This neglect of a great historic region profoundly disturbed a distinguished Portland physician, Dr. E. G. Chuinard. Dr. Chuinard addressed to Mr. Catton a humorous, but pointed letter, of protest, which has been made the subject of a pertinent and lively editorial in the Oregon Daily Journal of Portland of March 3, 1958.

I believe that many of my colleagues will be interested in reading this editorial, because it is my recollection that last year some of my colleagues from intermountain States were disturbed by so-called snub in Harper's magazine. Now we of the Pacific Northwest are disturbed similarly by a snub by Bruce Catton.

Because Mr. Catton is one of the wisest and most eminent of American historians, it is my hope that he will think twice of his omission and that his next list of 30 places where American history was made will include at least 10 or 15 localities in the region of Lewis and Clark, the Astor Party, the Pacific Fur Co., Fort Clatsop, Fort Vancouver, Champoeg, Wallowa Lake, and much other hallowed ground.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CHALLENGE TO MR. CATTON

President Polk evidently made a grievous error in jettisoning the campaign slogan of Fifty-Four-Forty or Fight which helped to elect him.

If he had not succumbed in 1846 to the lure of a peaceful settlement of the controversy with Britain over the boundary between the Oregon country and Canada, what a nice bloody war might have resulted. And how the historians—back East—would relish including in their ponderous volumes the story of the Battle of Juan de Fuca Straits or perhaps even the Battle of Fort Vancouver. And nowadays they would be recommending that easterners visit the spot where Gen. Winfield Scott or Gen. Zachary Taylor, later to be heroes of the Mexican War, had defeated the British regiments which had challenged the impudent Yankee battle cry. Yes, evidently it was a serious error of judgment that caused Polk to forget a third war with the hated British.

At least that seems to be the tongue-in-cheek viewpoint of Dr. E. G. Chuinard, loyal Portlander, who buckled on his armor to battle Bruce Catton, Pulitzer prize-winning historian of the Civil War and editor of American Heritage magazine. This Week magazine, distributed in the Journal's issue of February 16, included an article, See America With Bruce Catton's Lifetime Travel Plan, with the subhead, "Thirty Places Where American History Was Made—How Many Have You Seen"?

In a letter to Catton, the doughty physician wrote: "In the 30 places listed in your article, you mentioned not one place in the Northwest.

"Granted that these places, like San Francisco, are interesting but they have little American historical import in comparison with Fort Clatsop and Champoeg, Oreg. The historical significance of these latter places is that they helped hold an area for the United States that is larger than all of New England, and helped hold the Columbia River, whose potential permanent wealth far exceeds that of the Comstock lode and the gold of Sutter's Fort."

But the valiant physician doesn't stop there:

"You might be interested to know that the plat for the city of San Francisco, which rates among your 30, is in the courthouse at Oregon City, Oreg.—because at the time of granting the charter the only United States district courthouse on the Pacific coast was at Oregon City; here was the only organized seat of government west of the Rockies.

"Perhaps this great Northwest has missed its due recognition because it was secured for the United States so peaceably; Champoeg lacks the glitter of the Alamo."

Oregon is accustomed to eastern historians' snubs. Nor is this the first time that Catton, eminent historian that he is, has ignored Oregon's contributions to national history. In his superb (except for the blank spot on Oregon) American heritage Book of Great Historic Places, issued in 1957, the Pacific Northwest is left to the concluding chapter.

The sting that any Northwesterner must feel is not alleviated by the handsome color plates of the section dealing with the great trails, which does a rather satisfactory job of the Lewis and Clark Expedition. However, on the accompanying map, Portland and Astoria are the sole cities named in Oregon. There is no Fort Clatsop, where Lewis and Clark spent a long winter planning their return with word to President Jefferson they had mapped half a continent. Fort Vancouver is not even listed, although the Federal Government is now making tardy amends for its neglect of Dr. McLoughlin's headquarters.

In an agate-type directory of Oregon's historical spots, Champoeg is mentioned as on the site of the first settlement in the Willamette Valley, south of Portland. Of the supremely significant action taken at Champoeg on May 2, 1843, which established the first American civil government west of the Rockies, the book is silent.

Dr. Chuinard, after extending my sincere regards (to Catton) for what you have done to spur Americans intests in America, continues in this vein:-

"Not one place in the Northwest mentioned (in This Week) 1959 is Oregon's centennial; that would be a good time for you to become acquainted with us in the Northwest, and our history and scenery. We'd like to have you come; I'll wager that, hereafter, you'd include the Northwest in your articles of history."

Hurray for the belligerent doctor. If more Oregon people follow his lead, the sooner justice will be done the proud and significant events in national history that occurred in the Northwest.

The Great Contributions of the Order of DeMolay

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 11, 1958

Mr. WILEY. Mr. President, I was pleased to read in the newspapers of my State that the governing council of one of the very fine youth organizations in our land had met in Milwaukee, Wisconsin's largest city, to program further fine efforts on behalf of the Nation's young men.

I refer to a meeting of the Order of DeMolay, which took place at the Scottish Rite Cathedral, in Milwaukee, and which heard from Mr. Frank S. Land, founder and secretary general of this splendid organization.

The sessions heard, as well, from Mr. Walter O. Helwig, Wisconsin executive officer for the DeMolay, and from George M. Saunders, grand master.

Out of the inspirational training programs of DeMolay have come innumerable young Americans who have demonstrated the value of DeMolay leadership. They include 7 State governors and 10 generals.

I salute all those adults and young men in the Masonic brotherhood who, since 1919, have contributed to this organization.

I send to the desk two brief articles from last week's Milwaukee Journal which describe the meeting in Milwaukee, and ask unanimous consent that

they be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

PARLEY HELD BY DEMOLAY—LEADERSHIP IS TOPIC

The big problem in youth organizations today is to enlist adult leadership, the founder of the Order of DeMolay said here Thursday.

Frank S. Land, Kansas City, Mo., who founded the Masonic group for boys in 1919 and has been secretary general since, addressed the opening session of a 3-day meeting of the organization's governing council at the Scottish Rite Cathedral, 790 North Van Buren Street.

Land said youth organizations did not have trouble attracting members if they had a strong organization of adult leaders.

Many former DeMolays, he said, are in positions of influence today. They include 7 State governors and 10 generals. He said the organization, with chapters in every State and many foreign countries, was expanding greatly.

Friday's program was to include a speech by George M. Saunders, grand master.

The governing council of 150 is expected to be expanded to 200 Saturday. New officials also will be elected.

The council is composed of adults. Several hundred boys, including 22 State master counselors, are attending the meeting as observers.

HEAD ELECTED GRAND MASTER BY DEMOLAY

Clarence W. Head, of Pittsburgh, Saturday was elected grand master of the Order of DeMolay at the closing session of the order's governing council meeting. The council wound up a 3-day meeting Saturday at the Scottish Rite Cathedral, 790 North Van Buren Street. Head, assistant treasurer of the Aluminum Company of America, succeeds George M. Saunders, of Chicago.

Frank S. Land, founder and secretary general of DeMolay, announced election of five new members to the order's governing body. They are Sherman Adams, assistant to President Eisenhower; John G. Diefenbaker, Canadian Prime Minister; Robert W. Moore, Salt Lake City, Utah, a manufacturing company sales representative; Russel E. Hopgood, Jackson, Miss., clerk of the Mississippi court of appeals, and Senator FRANK CARLSON, Republican of Kansas.

Five DeMolays who risked their lives in water and fire rescues last year were given medals of valor. They are David B. Gaudes, 16, Manchester, N. H.; David G. Sherwood, 16, Canon City, Colo.; Bessie C. Browning, 18, of Brownwood, Tex.; Newton Saarinen, 19, Maynard, Mass., and Scott E. Streator, 16, Winona, Minn.

Next year's council meeting will be held in Kansas City, Mo.

Hard Swiss Learning

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. SMITH of Kansas. Mr. Speaker, the Omaha World Herald is one of the great newspapers of America. It still carries the torch for the fundamentals that made America great. Recently it published an editorial that has a down-to-earth philosophy in regard to a new look at our educational problems. It is self-evident that the social engineers and progressive planners of education will find little in this editorial that conforms to their ideals of the new welfare state.

HARD SWISS LEARNING

Admiral Hyman Rickover and others who have spoken favorably of the European educational methods used in Soviet Russia's schools have received considerable criticism. It has been easy for defenders of soft, effortless education to evade the argument and switch the discussion to the horrors of communism.

But how does this same hard learning work in other countries? In Switzerland, for instance, which is certainly a democratic country, strongly anti-Communist, sternly neutral in its dealing with all foreign governments?

Dr. Harold L. Clapp of Grinnell College writes in the quarterly review, Modern Age, about his firsthand knowledge of Swiss education. He and his family spent a year in Geneva and two of his children attended a grassroots, smalltown public school.

The Swiss, Dr. Clapp says, waste no time in idle chatter about education for a democratic society. They discipline the mind, and the disciplined mind takes care of the democracy.

Even a first grader keeps a separate notebook for each subject, makes all the entries himself—in ink. The same kind of neatness applies to what goes into the mind as well, says Dr. Clapp. No sleazy grammar is permitted. Materials are organized. Expression is precise.

In what corresponds to our third grade, geometry is introduced. They call it geometry, too, says Dr. Clapp, not block play or shapey-wapey. Vocabulary and spelling come under logical subject headings. Each year under each heading they add more grownup words until in sixth grade the young Swiss is expected to have a vocabulary of 7,000 words and be able to define such terms as despotism, autonomy, and protectorate.

Ten-year-old fifth graders read Moliere, Flaubert, Maupassant, Gide, and Giono which, says the Grinnell professor, would be a little like expecting American youngsters of that age to read selections from Shakespeare, Thackeray, Dickens, Henry James, and Steinbeck instead of Dick and Jane.

"Not too long ago," Dr. Clapp recalls, "this kind of fare was standard procedure in our schools. I dare you to test your little fourth grader Willie on an old fourth-grade McGuffey or Appleton reader."

In Switzerland there is a definite program for stretching young minds and for straining after literature at a tender age. The idea is that words give power and the more words a youngster knows the more he can accomplish.

Swiss arithmetic is also tough. Sample fifth-grade problems: It takes 384 square centimeters of paper to cover a cube. What is the volume of this cube?

This businesslike education trains a truly liberal Swiss people. Their youngsters don't emerge as regimented neurotics, says Dr. Clapp, but as tough-minded, tough-bodied, rosy-cheeked and relatively happy citizens. The young Swiss grownup is a man or woman who values freedom, knows how to run a representative government, and lives a full and happy life without ever spending a single minute of school time on life adjustment.

Dr. Clapp does not suggest that America should swallow the Swiss system whole, but only that we should learn something from it. For unless we strengthen our school programs promptly and mightily our children are going to be hopelessly outclassed in the forums and market places of the world.

We think there is wisdom in those words.

The Forward Look—An Address Delivered by George W. Lee, Grand Commissioner of Education, Before Elks Midwinter Conference in Philadelphia, January 30, 1958

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. REECE of Tennessee. Mr. Speaker, Lt. George W. Lee, Memphis, Tenn., who is grand commissioner of education, Improved Benevolent Order of Elks of the World, delivered an address before the midwinter conference of the Elks in Philadelphia, January 30, 1958, which attracted much favorable attention, and in order that it might be more widely available I am inserting it in the RECORD. The work of Lieutenant Lee in business, civic, religious, and political life, has been an inspiration to the young people who have followed his distinguished career. He has made many contributions toward better citizenship and greater understanding among our people.

The grand exalted ruler, officers, and members of Elkdom assembled, in taking a retrospect and a view of the American scene, I would suppose the ultimate purpose of education in a democracy is the development of a common heritage and a common citizenship. I am further convinced that such an unity of educational purpose must be established if our democratic processes are to expand. In this illimitible common ground, social, and racial differences will tend to disappear when equal opportunity is made available to all: and an inspiring and dynamic democracy will constitute the divine fire that will illuminate our presently fearful future.

In order to understand the supreme importance of a common heritage and a common democratic citizenship we must examine the composition of our American citizenship. About two-thirds of our people are of British descent and our civilization in its essence is profoundly influenced by its English part. Yet we must realize that a third of our population is not of British descent but stems from Oriental, African, and Latin inheritances. While the United States fortunately presents no cultural conflict like that in Canada or in Belgium, nevertheless tensions exist, and the word minorities have crept into general usage—a nonmeaning, nonexistent term in the United States of 75 years ago. To make possible the fading away of these conflicting and dangerous tendencies I lay great stress on the development of an expanding democratic citizenship.

To our public school systems and to our colleges and universities must we look for the creation of our essential national unity and harmony. To these cultural bodies in the years to come must be entrusted the intellectual and social materials out of which a democratic way of life may come into being—a way of kindly yet vigorous life against which the marshaled forces of communism cannot prevail. But are these institutions developed and ready to assure national leadership in the creation of a democratic citizenship—a citizenship that must justify itself in its beliefs and attitudes to a neutral world of more than a billion people subject to the tremendous firepower of Communist propaganda?

Let us then examine our public school system and make an effort to assess its present values. For that system has a vital responsibility in preparing us to live in a world in which Russia is so successfully powerful.

Our secondary school system is not as effective on educating instrumentality as we are led to believe. Our pride in our free democratic public school system has tended to blind us to its obvious defects. And moreover, we must note the term, our free public school system, has one meaning in a wealthy eastern suburb and a very different one in a southern backwood rural community.

Speaking generally—New England and New York-New Jersey areas have a marvelous group of private secondary schools; whose traditions are of the finest and whose cultural influence on its student body is unchallenged. But these schools as a rule are open only to the very wealthy.

Elsewhere in the United States our school system offer remarkable diversities, middle and upper middle class suburban schools are often excellent, and, in small cities with a strong educational tradition, and a relatively homogenius school population standards are unusually high. In the large cities, however, imperiling diversities show up. In an upper class neighborhood the schools are usually satisfactory but in such areas you find the public school at its worst.

Contrary to the general impression over public school system for the past 40 years has been continuously lowering its scholastic standards. The stern intellectual disciplines of Latin, Greek, algebra, geometry, and trigonometry are now rarely met. Nor is physics, chemistry nor biology seriously taught, but the cinch courses such as the domestic sciences, the manual arts, music, dancing, the orchestra, the band are all credit-giving, time-consuming, intellectually bankrupting courses. Now I don't mean that in a secondary school curriculum that there is not a place for such subject matter—what I do mean is that these cinch subjects should not be permitted to eliminate the important mathematic, scientific, and language disciples.

Then again there is the question of the quality of teaching. For more than a half-century the abler university graduate has gone into the professions or into business, the less ambitious into teaching. Salaries have not proven too attractive, yet many seem to be in this profession for money only. And then there are proportionately far fewer dedicated persons in the teaching profession than let us say 60 years ago.

The profession itself is unscholarly. A profound scholarship based upon reading into one's special field year in and out is not now too often found at least in the public school system. And then, too, the number of subjects taught by those who have no special knowledge is of everyday observation. And finally many in what should be a dedicated profession teachers often ape the habits and sometimes the dissipations of the well-off middle classes whose mode of life they can never hope to attain. But we who stake our whole future on democratic progress must solve both the scholastic and the economic problems of the teacher whose determined leadership can guarantee a successful democratic approach to our serious but conquerable problems.

Our universities present a similar picture, a few excellent colleges with high academic standards, the remainder from good to impossible. In these institutions the lowering standards of admission in conjunction with the elective system has reduced us to our inferior position. University education is not pursued seriously enough in the United States today.

Now the Negro anxiously desires the best possible education. Yet in our democracy even he is denied the best and most often must accept the worst. In the South the whole process of Negro education is regarded as an undesirable happening.

Our Elks department of education demands the best in education both in the public school system and in our colleges. We are demanding stiffer standards; we are asking for better equipped teachers; and we shall insist that the stigma of segregation become only a memory.

But with these demands upon our fellow citizens we do not stop, we could not if we would. Because the world of Africa is explosive, dynamic, shaking off centuries of sleep. The commonwealth of Ghana is a Negro state, its head, Dr. Nacrumka, is a world statesman, a man whom Queen Elizabeth of England would gladly receive with the other Empire statesmen at Buckingham Palace. Now, in Africa we Elks have a God-given opportunity to ally these developing colored states into our democratic orbit by extending to them our opportunities. I suggest scholarships be granted in American institutions of higher learning in order that we may attract through the influence of the graduates whom we have sponsored the loyalties of these great people to our democratic institutions. We must not forget that our 200 million African brothers should share in the blessings that a Washington, a Lincoln, and an Eisenhower, through their unshakable trust in human goodness have made avialable to us.

In the United States I am urging a physiological approach to civics rather than the anatomical approach as has been our educational policy over the years. Let our public schools set a shining example of racial and social collaboration—let us encourage the hope that anthropological differences in color and physiological variations in attitudes can all be resolved in the brilliant sunshine of a democratic tomorrow.

A common citizenship is the rock foundation on which we must build. In that common citizenship differences based on color, class, or caste must disappear. In that common citizenship the great democratic hopes of the past 150 years must be realized and accomplished. In establishing this common citizenship we are keeping the faith with the scores of great Americans and Europeans who have devoted their lives to the cause of freedom; a Lincoln, a Gladstone, a Douglass, a Finley Wilson flash to my mind among so many heroes of democracy.

And now with the Russian Communist fiend endeavoring by threats, through propaganda and by brainwashing to capture the yellow and black worlds for boshevism—we in the United States must move forward into this breech by demonstrating in our numerical life the strength of democratic idealism.

Our program for 1958 calls for a tightening up of our high-school curriculum, which will bring about special emphasis on a course in human relationships that will enable young Americans to create those great bridges over which they must cross in order to reconcile and to adjust divergencies in race and religion and in the neighborhood atmosphere.

Our objectives are to help remove all barriers in education through the development of a huge scholarship fund for the purpose of extending aid to children of all races, who suffer from race, tradition, poverty. In a day like this, it is highly important that young Americans, who are eager and willing to learn, be recognized and rewarded.

Today we know that human talents essential to the advancement of man are not restricted to race or country. In every race there are young men and women of great ability who, when given the opportunity for education, can help further the advancement of knowledge and contribute to the progress of our great country.

Young men and women, whether they be Jews, Negroes, Catholics, Irish, English, or Italians, have within themselves the potentialities to rise from the dust of the day's long road to the pinnacle of a laughing star.

The country faces a severe shortage of engineers and technically trained personnel, while on the other hand it is predicted that in the decade from 1950 to 1960, the Soviet Union will graduate 1,200,000 scientists, compared to 900,000 in the United States. Unless we remove all barriers in education, Russian scientific manpower might well outnumber ours in many key areas. We cannot afford at this time to set up barriers that will discourage young people who might become scientists when Russia is extolling the scholars and the scientists and devoting its financial strength for scholarship aid. The genius children of our community must not be lost as casualties in the battle of race and tradition or in the blight of poverty.

In the past, our department has played its own particular and peculiar role, to stimulate a deep and widespread spirit of American democracy.

In 1955 our department fought to keep the light of freedom burning by presenting scholarships to Ethel Louise Belton, Spockwood T. Bolden, Jr., Dorothy Davis, Linda Brown, and Harry Briggs, Jr., the children who were named as chief plaintiffs in the long legal drama that led to the Supreme Courts' decision outlawing segregation in the public schools of the Nation.

In 1956, our Department moved into Clinton, Tenn., to give emotional strength to the mothers of those 12 schoolchildren who braved the dangers of mob violence and showed up for rollcall at the first integrated school in that State. The young leader of that group, Bobby Cain, is now attending A & I State University, on an Elks scholarship. In the same year, our department moved into Mississippi, where 500 students rose in revolt against fascism and Uncle Tomism and young Ernest McEwen, their leader, is now in the University of Michigan on an Elks' scholarship.

A part of our 1958 scholarship program for heroes will include the nine brave children, who stand today on the rock as heroic figures, armed with the unquenchable faith in God and man that all people wish to be free and will struggle against odds to win freedom.

The grand exalted ruler, Robert H. Johnson, has commissioned Lionel Hampton, famous band leader, chairman of the Elks scholarship campaign. With his aid we will conduct benefit shows in such large cities where we have strong educational committees, capable of promoting giant benefit affairs for the scholarship fund.

We have already promised college scholarships to the nine Little Rock children and we plan to do the same thing for others attending desegregated schools in tension areas, where courage is demonstrated under trying circumstances.

On our scholarship roll for 1957 and 1958, we are extending aid to 53 young Americans in colleges and universities of America, Canada, and Mexico.

Thus, we move forward to the day when America can truly say—may the words of our mouths and the meditations of our hearts show forth everywhere our dedication to human brotherhood under God.

The Bar Admission Cases, a Strange Judicial Aberration

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. GATHINGS. Mr. Speaker, it is a great privilege to live in a land where constructive criticism against one or all

of the departments of government is in keeping with the rules of propriety as well as accepted procedure.

In the March 1958, issue of the American Bar Association Journal is an article that will appeal to all attorneys and will be of interest to every American citizen. The Honorable William H. Rehnquist of the bar of the State of Arizona writes on the bar admission cases, which he terms "A strange judicial aberration." Mr. Rehnquist's article will be of greater interest to readers when it is remembered that he served as law clerk to the late Justice Robert H. Jackson after receiving his bachelor of laws degree from Stanford. The article points up with care and persuasion the fallacy of the high Court in recent decisions in going overboard to protect human rights.

Mr. Rehnquist's account of these constitutional transgressions in the cases of Schware against Board of Bar Examiners of the State of New Mexico and Konigsberg against State Bar of California follows:

THE BAR ADMISSION CASES—A STRANGE JUDICIAL ABERRATION

(By William H. Rehnquist)

Communists, former Communists, and others of like political philosophy scored significant victories during the October 1956, term of the Supreme Court of the United States, culminating in the historic decisions of June 17, 1957. In 2 opinions handed down in early May 1957, the Court held that 2 applicants to take State bar examinations—1 an admitted ex-Communist and 1 identified as a Communist—had been deprived of constitutional rights by their respective State bars when the latter refused to let them take the examination. Neither *Schware* v. *Board of Bar Examiners of the State of New Mexico* (77 Sup. Ct. 752), nor *Konigsberg* v. *State Bar of California* (77 Sup. Ct. 722), was considered by most newspapers to be of the same front page importance as some of the later decisions of the Court; but for the reasons discussed below, these two bar admission cases may be the most remarkable of the entire term.

In Schware, the New Mexico bar examiners had determined that Rudolph Schware, an applicant for admission to the New Mexico bar, had failed to show the good moral character which New Mexico (and almost every other jurisdiction) requires for admission. This ruling was upheld by the State supreme court (291 P. 2d 607, rehearing denied, 291 P. 2d 629). In Konigsberg, the California examiners found that Konigsberg had failed to show affirmatively either that he was of good moral character or that he did not advocate the overthrow of the State or Federal Governments by force or violence. The State supreme court by minute order denied further review. A majority of five of the Supreme Court of the United States held that these factual determinations were not rationally justified. In Schware, the remaining 3 of the 8 participating Justices concurred on a separate ground; in Konigsberg, the same 3 dissented, 1 on jurisdictional grounds and the other 2 on the merits. This article is concerned only with the opinion of the Court, written in each case by Mr. Justice Black.

What do the reported opinions tell us of the facts?

Schware was born in 1914 in New York City. Finishing high school in 1932, he joined the Communist Party. He left it for a short period in 1937, rejoined and finally left it in 1940. He testified that the reason he joined was his dissatisfaction with the lack of vigor of the socialist movement during the depths of the depression. In the years following his graduation from high school, he was active as a labor organizer in a variety of jobs. During this time, he used two different aliases, both Italian names. He gave three different explanations for why he had done this: (a) To enable him to be a more effective organizer among predominantly Italian workers, (b) to obtain employment in the shipyards, where Jews were not often employed and (c) upon being arrested in connection with the waterfront strike in California in 1934, so that he would not be fired as a striker when he returned to work.

Schware had been arrested at least twice during the 1934 California strike on suspicion of criminal syndicalism. He had been arrested and indicted, in 1940 for violation of the Neutrality Act, in connection with his activities in recruiting soldiers for Loyalist Spain. He was arrested in 1941 while driving a car to the west coast on suspicion that the car was stolen. None of these charges was ever prosecuted to conviction.

In 1944, some 4 years after he, according to his own testimony, had left the Communist Party, Schware had written a letter to his wife. The letter, which he offered in evidence, contained the following passage:

"Jim Crow is on a par with anti-Semitism, anti-Catholicism, anticommunism. All the above 'antis' I mentioned are most dangerous and stupid mistakes for Americans to make."

Finally, in response to written request on the application for such information, Schware had furnished practically none of the names of persons by whom he was employed or street addresses at which he had lived during the years 1932 through 1944.

Schware produced a number of testimonials, both oral and written, to his good moral character. Concededly they would support a finding of good moral character had one been made; since the trier of fact made no such finding, this evidence would not appear to bear on the constitutional question.

On the basis of this testimony, the New Mexico bar examiners concluded that Schware had not carried his burden of proof on the issue of good moral character. He then appealed to the Supreme Court of New Mexico, which said in its opinion:

"On the basis of these considerations we must approve the recommendations of the bar examiners. * * * They questioned petitioner, heard him, and observed his demeanor."

THE KONIGSBERG CASE—THE FIFTH AMENDMENT

Konigsberg had three hearings before the California board of bar examiners. The position he finally took in these hearings was that he would deny that he advocated the overthrow of the Government by force and violence, but would answer no other questions on this subject. He specifically refused to answer whether he was now or ever had been a member of the Communist Party. He ascribed his refusal to answer to his claimed constitutional right to remain silent (not the privilege against self-incrimination). He was repeatedly told by various examiners that his recalcitrance would make it difficult or impossible for the committee affirmatively to certify him as meeting the two standards required for the California bar. At one point, Konigsberg intimated that he feared a perjury prosecution if he denied membership in the Communist Party; the following exchange took place:

Mr. STERLING. You are afraid if you answer the questions as to membership in the Communist Party in the negative and say, "No; I am not a member and I never have been," assuming you made that answer, you are afraid that we could find half a dozen people that were on a perjury trial and the jury believed them and not you, you committed perjury.

Mr. KONIGSBERG. I am saying that no matter what answer I gave whether I was or wasn't, undoubtedly there would be several whom you could get to say the opposite, and as I said before——

Mr. STERLING. Subjecting you to a perjury charge?

Mr. KONIGSBERG. Yes.

A woman who was a former Communist Party member testified in Konigsberg's presence that in 1941 he had attended meetings of the party unit to which she had belonged. Konigsberg had written editorials in a local newspaper which criticized in strong language American participation in the Korean war and the action of the Supreme Court in refusing to review the conviction for contempt of the so-called Hollywood Ten.

Konigsberg produced numerous testimonials from persons who had known him all of his adult life as to his good moral character. As with Schware, these testimonials would have amply supported a finding of good moral character had the trier of fact so found.

On the basis of this evidence, the California bar examiners concluded that Konigsberg had failed to show either that he was of good moral character or that he did not advocate the overthrow of the Government by force and violence. The Supreme Court of California rendered no opinion in denying him a hearing.

How did the Supreme Court of the United States reach the conclusion that these two applicants had been denied their rights under the 14th amendment's due-process clause by their respective State bars?

Both Schware and Konigsberg had contended that certain specific actions of the examining boards or rules governing admission to the bar were unconstitutional as applied to them. Schware argued that (1) the New Mexico examiners had used confidential information to which he was denied access, and (2) New Mexico could not validly consider membership in the Communist Party, at a time when that party was lawful in the State, as a ground for denying admission. Konigsberg claimed that (1) California could not impose a categorical requirement that a bar applicant must not advocate the overthrow of the Government by force and violence, and (2) he had a constitutional right to remain silent in the face of the examiners' questions about present and past membership in the Communist Party. The Supreme Court majority found it unnecessary to decide any of these questions, and it may be inferred that for purposes of argument it overruled them.

Nor does the Court disallow either of the standards for bar admission involved in these cases: good moral character and nonadvocacy of violent overthrow. Schware states generally that the qualifications required by the State for admission to the bar must have rational connection with the ability to practice law, 77 S. Ct. 756, but does not suggest that either of these requirements run afoul of such a rule. The Court also declares that States may not apply permissible standards so as to exclude an applicant when there is no rational basis for a finding that he fails to meet these standards, or when such a finding is invidiously discriminatory as to the applicant, citing *Yick Wo* v. *Hopkins*, 118 U. S. 356, 6 S. Ct. 1064. Yick Wo struck down discriminatory administration of a local ordinance, the pleadings showing that all Caucasian applicants received discretionary exemptions from the ordinance's effect while no Chinese applicants received such an exemption. In neither Schware nor Konigsberg do the opinions suggest that there is any evidence in the record showing that these applicants were treated differently by their respective examiners from other similarly situated applicants, or that any class to which they belonged was the object of invidious discrimination.

The one proposition, of the two for which it is apparently cited by the Court, for which Yick Wo stands, then, is not involved in these cases. The Court actually proceeds on the premise that there is no basis in fact for the finding of the bar examiners, rather than on the premise that the respective States have applied more rigorous standards to these applicants than to others.

This approach, in itself, is something of a novel one; the one case cited for it, Yick Wo, does not appear to deal with it. Even in its statement this new due process sounds little different from the test which State appellate courts apply to review jury verdicts in the type of cases which constitute the staple of their business. In almost every lawsuit, the losing party is deprived of either life, liberty, or property, and this deprivation is based on a factual finding by a judge or jury. If the losing litigant can show to the satisfaction of some court that a factual finding is not rationally justified, *Schware*, 77 S. Ct. 760, or that there are not substantial doubts, *Konigsberg*, 77 S. Ct. 728, to support a negative finding, does he then have a constitutional case? Unless there is some reason why being denied admission to the bar is a constitutionally more serious deprivation than being imprisoned or suffering a large adverse money judgment, or unless former Communists and suspected Communists are a specially favored class who alone may invoke this new due process, logically the Court has made almost every case a due-process case.

The Supreme Court has long held that when a constitutional claim depends on a finding of fact in a court below, it will review the record to see if the evidence supports the factual finding of the lower court. *Local Union No. 10* v. *Graham*, 345 U. S. 192, 197, 73 S. Ct. 587, 97 L. ed. 946 (cited as "cf." in *Konigsberg*, note 17), which in turn cited *Milk Wagon Drivers' Union* v. *Meadowmoor Dairies*, 312 U. S. 287, 293, 294, 61 S. Ct. 552, 555, 85 L. ed. 836. But this factual review has in the past been ancillary to the decision of an independently presented constitutional question; in *Schware* and *Konigsberg* it is the constitutional piece de resistance.

The novelty of the doctrine is not limited to its statement; even more surprising is its application in these two cases. Many lawyers used to traditional rules of appellate review will be surprised at the manner in which the Supreme Court canvassed the facts in each case.

In Schware, the trier of fact had before it admissions by the applicant of previous membership in the Communist Party, use of aliases and criminal charges. In addition, Schware, whether intentionally or not, had effectually prevented further checking of his story by failing to furnish names of employers and addresses at which he had lived. In view of the fact that Schware had an affirmative burden to prove good moral character, would not many impartial observers say that New Mexico's refusal to accept an applicant who made no explanation of such a record would be far from arbitrary or irrational?

Schware did offer explanations of many of these incidents, which, if believed, would tend substantially to mitigate their gravity. But the Supreme Court treats these self-serving explanations by Schware as if they were entitled to the same weight on appeal as the admissions by him which reflect on his character. The Court's opinion states as facts the various reasons Schware assigned for his conduct. The usual rule of appellate review is that the trier of fact is at all times free to disbelieve the whole or any part of the testimony of an interested party, which Schware surely was here. It could hold his admissions against him and yet decide to believe none of his explanations, either because of his demeanor or because of his naturally strong motive to dissemble if dissembling were necessary to carry the day for him. The opinion of the highest Court of the land, which on such a basis reverses a finding by the trier of fact against the party having the burden of proof, is either a drastic departure from these settled principles, or a constitutional overriding of them which is neither adverted to nor justified in the opinion.

The California bar examiners had before them the identification of Konigsberg as a Communist in 1941, together with his extreme recalcitrance in answering any questions about membership in the Communist Party, and his editorials (which, while standing alone would by no means brand the author a Communist, were nonetheless wholly consistent with his having been a Communist much later than 1941). Again, would it not appear to impartial observers that when an applicant, confronted with such a record, stands mute and completely refuses to answer questions clearly relevant to the standard which the Court says, at least arguenda, California might apply, his rejection by the examiners was not irrational?

The Court's opinion, however, while it did not hold that Konigsberg was entitled to the constitutional privilege of silence which he claimed, stated:

"We find nothing in the record which indicated that his position was not taken in good faith. Obviously, the State could not draw unfavorable inferences as to his truthfulness, candor, or his moral character in general if his refusal to answer was based on a belief that the United States Constitution prohibited the type of inquiries which the committee was making."

The two cases of its own which the Court cites for this latter proposition appear to deal only with the permissible inferences from a valid claim of the constitutional privilege against self-incrimination. They appear to leave untouched the question of inferences from an invalid or unwarranted claim of privilege. But even if it is to be from now on a Federal constitutional rule that no factfinding tribunal may draw an adverse inference from the refusal of a party to answer pertinent questions based on an erroneous but honest belief that he was constitutionally privileged in so refusing, see *Barsky* v. *Board of Regents* (347 U. S. 442, 457, 74 S. Ct. 650, 659) (dissenting opinion of Mr. Justice Black), the inquiry still remains as to who is to decide whether the refusal was in good faith. The Court's opinion says that there is nothing in the record which suggests lack of good faith. Again, as pointed out in the dissenting opinion of Mr. Justice Harlan, such questions are traditionally for the trier of fact, which has the opportunity to observe the witness while he testifies. To many whose acquaintance with ordinary factfinding is greater than with constitutional law, the Court's opinion does not satisfactorily explain why the California examiners were not allowed to disbelieve Konigsberg's essentially self-serving statement as to why he refused to answer. Such explanation would seem all the more necessary in view of the colloquy between Sterling and Konigsberg with regard to a feared perjury prosecution set forth above. Motive may be immaterial when the claim of privilege is justified, but when the Court's own statement requires an erroneous claim of privilege to be made in good faith, it is difficult to see why the trier of fact is not allowed to determine the question of good faith.

THE FINAL EFFECT, A TRIAL DE NOVO

In short, what the Supreme Court of the United States has done in each of these cases is to give the applicants a de novo trial on the basis of the printed record. It has chosen to believe every self-serving statement made by each applicant and on the basis of such facts to hold that the findings below were not rationally justified. One must go back 37 years to the case of *Ohio Valley Water Co.* v. *Ben Avon Borough* (253 U. S. 287, 40 S. Ct. 527), to find even a color of precedent for such a procedure. The rule laid down in Ben Avon Borough, which in the light of these cases seems quite restrained, was only that where a utility charged that governmentally fixed rates confiscated its property, it was entitled to a trial de novo in some court on the issue of confiscation. Even Mr. Justice McReynolds, speaking for a divided Court, did not suggest that the de novo trial should take place in the Supreme Court of the United States.

Nor has the recognized doctrine of review of the record where a constitutional claim depends on a lower court's finding of fact, Local Union No. 10, Milk Wagon Drivers' Union, supra, ever gone to such lengths. In the past this rule has meant that the Court would, in contrast to its usual policy of refusing to canvass facts at all, review the record the way a State appellate court would. The opinion of the Court in *Milk Wagon Drivers' Union* v. *Meadowmoor Dairies*, *supra*, specifically stated in connection with the application of this rule: "It is not for us to make an independent evaluation of the testimony before the master," 312 U. S. 287, 294, 61 S. Ct. 552, 555.

It is all but incredible that the majority of the Court in Schware and Konigsberg can mean their rule of rational justification to have general application. Yet if Schware and Konigsberg are to be its beneficiaries, why not every other litigant before the Court? As suggested above, denial of the right to practice a calling is not invariably and indisputably more onerous than other adverse results commonly reached in both civil and criminal litigation. The only remaining difference between Schware and Konigsberg, on the one hand, and a hypothetical litigant who would seek advantage of the rule of their cases, on the other, is that Schware was an admitted ex-Communist and Konigsberg was accused of being a Communist. Conceding that they should be treated no worse than other litigants, is there any reason why they should be treated better? Rationally it is difficult to understand why such persons are entitled to factual review and trial de novo in the Supreme Court while the ordinary man in the street is not. Since the result reached here is not ostensibly based on any civil liberties claim, even that ground of distinction is lacking.

If the Court had chosen to give the stamp of approval to those claims of Konigsberg and Schware which it bypassed, many persons would have disagreed with the result. Nonetheless, the result would have been a principle which could have had application to all similarly situated persons. The most serious criticism of the Court's opinions in Schware and Konigsberg is not that they require such persons to be admitted to practice law—a result about which thoughtful people may disagree—but rather that they reach their result by a line of reasoning which appears to be good for these cases only. Just as surely as Schware and Konigsberg cannot rationally be limited to Communist and suspected Communist bar applicants, they cannot practically be applied to other classes of cases without making the Supreme Court of the United States an appellate court of general jurisdiction. A decision of any court based on a combination of charity and ideological sympathy at the expense of generally applicable rules of law is regrettable no matter whence it comes. But what could be tolerated as a warmhearted aberration in the local trial judge becomes nothing less than a constitutional transgression when enunciated by the highest court of the land.

J. Edgar Hoover

SPEECH
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. LANE. Mr. Speaker, we in the United States have been most fortunate in being served for so many years by such a skilled and devoted public servant as J. Edgar Hoover, Director, Federal Bureau of Investigation.

No wonder that the Communists see red at the very mention of his name. No man in the United States has done more to anticipate their plays and break them up before they got started, than the very able Director of the FBI.

Due to the efficiency of the agency and the exceptional qualifications of its personnel, the Communists have been outwitted at every turn. The Communist Party in the United States has become demoralized, as its members suspect and distrust one another.

Because they never know which of their comrades are FBI undercover agents, planted in their ranks to keep tabs on every conspiratorial and subversive move.

It is no exaggeration to say that the FBI is J. Edgar Hoover, for he has imbued every member with his own passionate faith in freedom, and with the necessity of thoroughly understanding the way that the Communist mind twists and turns, in order to frustrate this menace, no matter how it may try to disguise itself.

His diagnosis of the Communist Party in the United States is complete.

There is no hidden symptom that escapes his experienced search.

Now, out of his vast practical knowledge, he brings to the people of the United States, the opportunity to detect the devious ways of communism, so that we may know how to spot it and combat them.

If J. Edgar Hoover had done nothing more than to develop the agency which he heads, into the most effective counter-intelligence weapon against communism in the whole world, we should be eternally grateful to him.

But he has done more, and in the best tradition of our democracy, by enabling us to arm ourselves with his knowledge, and, let us hope, with a part of his skill.

It is a foregone conclusion that the book which is the fruit of his rich and varied experience, is going to become a best seller.

But, more than that, it is going to render a great public service by its exposé of the enemy that lurks in the shadows.

Masters of Deceit, by J. Edgar Hoover, throws the spotlight on the secret treachery which is basic to communism.

After reading its revealing chapters, there will never be any excuse for anyone to underestimate, or to fall victim to, the tricks and stratagems of atheistic communism.

J. Edgar Hoover has ripped the mask from the Red conspiracy.

Aid for the Enemy

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 11, 1958

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Aid for the Enemy," which was published in the Indianapolis Star on March 10, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

The Indiana Appellate Court ruled the other day that a Hammond man no longer needs to pay support money to his divorced wife and son, who live in Communist Poland. One reason for the ruling was that 80 cents out of every $1 the former husband sent to Poland would have been confiscated by the Polish Government, leaving only 20 cents for the woman and her child.

At almost the same time when the appellate court ruling was handed down, another Hoosier was speaking much to the same point in Washington. Senator WILLIAM E. JENNER objected to a proposed $98 million United States foreign aid loan to Poland. The loan, he said, is a device whereby Americans are to help quiet patriotic resistance of Polish farmers to Soviet exploitation.

Unintentional support for both the appellate court and JENNER came almost simultaneously from a press service specializing in international political comment and analysis Worldwide Press Service, in a dispatch from Vienna by Siegfried Weyr, notes that the uneasy dictatorship of Communist President Gomulka has been materially strengthened by United States foreign aid. Weyr takes an unrealistically rosy view of Gomulka's national independence from the Kremlin, but his facts fully document JENNER's contention. United States foreign aid to Poland does strengthen the Soviet Union.

When Communist Gomulka came to power 18 months ago, his chief aim was to prevent an anti-Communist rebellion such as the one in Hungary. This was when, as Weyr notes, "Polish economy teetered on the edge of chaos. Stalinist overexpansion of heavy industry had created politically dangerous shortages of consumer goods. * * * Large segments of industry were close to the shutdown point. Among these was the foreign exchange-earning textile industry."

That was the time when, by the simple device of doing nothing, the United States could have allowed Poland to become startling proof before the world, including all the underdeveloped nations for whose ideological minds we are supposedly bartering, that the economic consequences of communism are ruin. Instead we gave Poland $95 million in foreign aid.

The Kremlin had the same idea our giveaway bureaucrats had. Poland, a showcase of communism, must not be allowed to collapse. Moscow added $175 million to help prevent the collapse. The results? Let Weyr sketch them in: "United States cotton, for example, appears to have saved the Polish textile industry. * * * While Russia gave Poland cotton for its daily needs, the United States supplied the necessary cotton in the form of stockpiles."

Does anyone remember any more, incidentally, that cotton is a vital ingredient of explosives, and that a country with a big stockpile of cotton has a good start on munitions manufacture?

But to return to Weyr's report: "Gomulka has had to allow the imports of consumer goods to go up. Much of the new increase is provided for in the Polish-Soviet trade agreement. * * * This is a direct result of Poland's not having been able to continue to meet its bills for western credits."

It all adds up to one inescapable conclusion: United States aid to Poland has increased trade between Poland and the Soviet Union even while it forestalled an anti-Communist rebellion which, at the very least, would have made Soviet penetration elsewhere more difficult.

Yet our giveaway artists continue to channel money taken from the wages of American workers to the direct support of the Communist dictator and the indirect support of our greatest enemy. As JENNER asked, "Who in our Government is willing to help the Soviet Union intimidate the rest of the free world?" Whoever the bureaucrats are who have sold the idea of aid to Poland to the administration, they should be hunted out. The aid should stop, and those responsible for it should be removed from positions of trust.

Inconsistency in Findings of the Army Retirement Board and the Veterans' Administration in Disability Cases

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from a constituent:

MARCH 6, 1958.

The Honorable CARROLL REECE,
Member of Congress,
Washington, D. C.

DEAR CONGRESSMAN REECE: In the last several years, since World War II, I have been an active member of the veterans organizations here in Dickson. I have noted with much interest the various laws that have been passed for the protection of veterans and their dependents.

One particular problem which seems unusual to me is that Army disposition and/or retirement boards, and the Veterans' Administration do not always concur in the medical findings where a veteran is concerned. One particular case that I remember is that of Jesse R. Stokes, C-18754863. Jesse was retired by the Army for thrombophlebitis and is currently on the retirement roll. The Army granted him this retirement notwithstanding the fact that there was evidence of preservice existence of the disability. They found that the condition was aggravated by basic training. The veteran filed for Veterans' Administration compensation, because he wanted to go to school under the GI bill of rights for disabled veterans. The Veterans' Administration denied his claim holding that the condition was not aggravated by service.

It seems to me that there should be some type of bill introduced to require that both services be consistent in their findings. In this case the Army had custody of the veteran. They had first-hand information, and accordingly granted retirement pay; whereas, the Veterans' Administration, who only had access to the records made by the Army, still insisted that the condition was not aggravated.

Would appreciate very much your thinking on this matter. This particular veteran comes from a very fine influential family here in Dickson County. I am sure there are others who have been the victims of such interpretations.

Very truly yours,

WOODROW W. DUKE, *Charlotte, Tenn.*

Excessive Crude Oil Imports Impair Domestic Industry

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. BREEDING. Mr. Speaker, the distinguished Governor of the State of Kansas, the Honorable George Docking, has communicated to me the serious, adverse effect increasingly excessive imports of crude oil are having on the economy of the State of Kansas.

With the House Committee on Ways and Means currently studying the President's reciprocal trade recommendations, I believe this to be an appropriate moment to call attention to the depressing impact excessive imports of crude oil and its byproducts are having on our domestic productive capacity.

A realistic appraisal, Mr. Speaker, of our present and prospective national defense posture compels me, and I believe many other Members of the House, to lend my full support to promoting peak domestic oil production lest we be caught during a national emergency with a severe shortage of oil, the lifeblood of our defense structure.

A system of effective controls over the vast quantities of oil imports, so injurious to our domestic reserve levels and productive capacity, must be seriously considered, Mr. Speaker.

THE STATE OF KANSAS,
Topeka, March 5, 1958.

Hon. J. FLOYD BREEDING,
House of Representatives,
Washington, D. C.

DEAR MR. BREEDING: I would like to call to your attention and stress the serious effect excessive imports of crude oil and its byproducts, particularly jet fuel, are having on the economy of the State of Kansas and its people, the domestic oil industry, and the security of our Nation.

Next to agriculture, the oil industry is the biggest industry in our State and because of excessive imports we are experiencing excessive inventories, decreased revenue because of shut-in production capacity, many jobless due to drilling activity and other industry layoffs, and many other businesses are suffering because of their dependence on the State's oil industry. Due to excessive oil imports supplanting rather than supplementing the domestic oil imports our domestic oil drilling activity in the United States of America has steadily decreased with the eventual resulting effect of decreasing our crude oil reserves which we have to depend on in case of emergency when foreign oil is choked off.

The effect of imported crude oil on product prices and in turn their effect on the operating economics of inland refineries which operate on domestic crude oil is becoming more and more serious. If the practice of importing disproportionate amounts of foreign crude oil should continue, the ultimate outcome could well mean the disappearance of a large segment of the domestic refining industry.

In consideration of the foregoing I urgently endorse the adoption of curtailment through mandatory controls on imports of crude oil and its byproducts in order to preserve a strong domestic oil industry which is so vital to the security of our Nation.

Sincerely,
GEORGE DOCKING, *Governor.*

Aircraft Nuclear Propulsion—We'll Be Second in Another Scientific Race

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. PRICE. Mr. Speaker, it has been said that sputnik was actually of more benefit to the United States and the free world than to the Soviet Union because it spurred our efforts to keep ahead in science and technology. There is some justification for that observation, but a decision announced in the White House last week leaves me with the feeling that not all of us were prompted to take warning from the Russian achievements.

The President has ordered that work to get an American atomic airplane aloft first must take a back seat to efforts to get an operational military nuclear-powered plane. His action signals long delays. The American people might well ready themselves for another Russian first—this time with a nuclear aircraft, possibly within 18 months.

The following editorial from the Miami News of March 8 cogently states the case of our being first in the sky with an atomic plane:

WE'LL BE SECOND IN ANOTHER RACE

Most Americans will regret the decision reached by President Eisenhower against a rush program to make this country the first to fly an atomic-powered airplane. The President made known his decision in a letter to Representative MELVIN PRICE, Illinois Democrat.

The Congressman had written the President last October urging such a program. He had then just returned from a visit to Russia and was convinced the Russians were seeking to be first in the atomic plane field. Why it required from October to the present for Mr. Eisenhower to reach his decision and reply to Mr. PRICE's letter is something which only the President can explain.

Our tremendous loss of prestige when the Russians put not 1, but 2, satellites into outer space has caused many in Congress to feel we should lose no time in winning an atomic plane race. Mr. PRICE is chairman of a Subcommittee on Research of the Joint Congressional Committee for Atomic Energy.

The President's reasoning was that it would be pointless to place an atomic power plant in just any big airplane. Both plane and reactor should be designed for each other, he contended. This, he said, would take time and would divert extremely scarce talent from attacking fundamental problems that must be solved before a militarily important aircraft can be produced.

The President contended that to set a target date for producing an atomic-powered plane would be somewhat arbitrary and therefore may be unrealistic.

In other words we'll just go along about our business and some day when we get around to it we'll build such an airplane. Meanwhile, the Russians are expected to make the first atomic-powered flight in about 18 months.

It is evident that President Eisenhower still fails to realize what happened to our standing in the world when the Russians demonstrated their high technical capabilities by launching the sputniks. Nor does he appear to realize the further blow to the esteem in which Americans were formerly held if the Russians beat us to atomic-powered flight.

He apparently is still influenced by such thinking as that expressed by Charles E. Wilson, the former Defense Secretary, who said that an atomic plane, if one could be built would be a bum airplane.

We subscribe to the opinion of Mr. PRICE and his colleague, Representative CARL DURHAM, North Carolina Democrat, who issued a joint reply to the President's letter. Ours is a hopeless, hapless, helpless policy of drift and indecision in this matter.

Watch Out for the Federal Spenders in Your Schools

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. GWINN. Mr. Speaker, John T. Flynn is one of the most respected lawyers in America. His views on educational problems, and their cause, deserve careful attention.

WATCH OUT FOR THE FEDERAL SPENDERS IN YOUR SCHOOLS
(By John T. Flynn)

It's beginning to look as if the politicians in Washington would be lost without Russia—and Russian sputniks. In fact, this Congress is getting to be called the sputnik Congress. That means that every imaginable scheme for spending your money, no matter how fantastic or how useless, is being urged by the spending-hungry politicians. And because they can't get the money out of you unless they scare you to death, it's all being hooked up with Russian sputniks.

Perhaps the most dishonest of these schemes is the one to allow the Federal Government to spend a billion or 2—as a starter—on education. This will serve 2 purposes if the politicians put it over. It will give them something else to spend your money on—at a time when the Government is hunting around desperately for new ways to spend. And it will put the hand of the politicians in Washington further into your State and local schools.

The excuse for this, of course, is that Russia got a sputnik into space before we did because she had more and better scientists to develop it. And she had more and better scientists, so the argument goes, because she has a better educational system than ours. The answer. It's always the same when it comes from politicians—spend and spend and spend—a billion here and a billion or 2 there.

Now the truth about the matter is that what is wrong with our schools is something all the billions in the world can't cure. In the last 25 years, instead of educating our youngsters in the schools, we've been turning out whole batches of them who can't read, can't spell, can't add, substract, multiply or divide. They know little of history, biology, chemistry or language—and care less. All

this is the result of the baleful system of so-called progressive or modern education, under which the kids are taught something called life adjustment—under which they must be free to do so they please and even to choose what subjects they will learn.

The President and his fellow-spenders think the results of this quarter century of undereducation can be corrected by spending a few billion dollars. What they don't know—or would like to overlook—is that Russia once tried this so-called progressive education. When the Communists took over in Russia, they instituted the system in the Russian schools. They had it there for 15 years. Then the kids educated under progressive methods started to appear for entrance before college examining boards. The examiners were appalled at how little they knew—at how badly educated they were. So the Communists in Russia threw out the progressive system lock, stock, and barrel. They went back to the old, traditional American system of educating children—with Communist overtones, of course. But just at the time that Russia was abandoning progressive education, we took it up here—under the prodding of home-grown Communists and leftwingers. They had seen what it had done in Russia. What more effective way could there be for bringing about the downfall of the American way of life than by corrupting generations of American children with this system?

That's what is the matter with American education today. And it can be corrected very simply by going back to teaching the fundamentals of education and cutting out all the frills and furbelows. We don't have to spend a billion or even a million dollars to do this. In fact, it might even save some money which could be spent much more wisely in our schools.

But the politicians—egged on by the left-wing educationists—are using Russian scientific advances as an excuse to get their hands on our schools. It cannot be repeated often enough that the Federal Government has no money to give to your schools. It has to get the money from you—the people in the States—and then hand some of it back to you to spend on your schools. But once the Federal Government takes your tax money, you won't get it back to spend on your schools or anything else without the politicians in Washington telling you how, when and where it should be spent. And before you know it, the Federal Government will be telling you what can be taught, and what can't be taught, how it should be taught and how it should not be taught, in your local public schools.

As long as you can keep the hand of the Federal politicians out of your schools, you—who build and support them and pay the teachers—have the power to clean up the mess into which the progressive educationists have gotten your schools. But once the Federal politicians start spending your money on your schools, your chance to clean up that mess is gone forever.

An Act of Heroism

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. SMITH of Mississippi. Mr. Speaker, I would like to call attention to an outstanding act of heroism which occurred in my congressional district last week. Ernest Crowell, a serviceman for the Delta Electric Power Association, saved three children from death in their flaming house.

Mr. Crowell's action is in the best tradition of the rural electric power associations and is typical of the best relationship which exists between the races in our area.

Under unanimous consent I include an account of this act which appeared in the Memphis Commercial Appeal:

[From the Memphis Commercial Appeal of March 6, 1958]

THREE NEGRO YOUNGSTERS RESCUED FROM FIRE—CARRIED FROM BURNING HOME BY REA SERVICEMAN

CRUGER, MISS., March 5.—An REA serviceman rescued 3 Negro children Wednesday from the flames of their 4-room frame house.

Ernest Crowell, a serviceman for Delta Electric Power Association, was driving through a Leflore County plantation near here when he noticed smoke coming from a tenant house.

Entering to investigate, he saw 3 Negro children, ages 3 months to 3 years, in the flaming interior of the house. Crowell carried them out, then went back to see if there was anyone else inside.

Before the flames swallowed the structure, Crowell had saved some of the furniture. The mother of the children, Ella Young, had left the children unattended.

Observation of "Egg Month" Gains Momentum

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. SCUDDER. Mr. Speaker, I am in receipt of a newspaper clipping from the Press Democrat of Santa Rosa, Calif., under date of March 5, 1958.

Because they are taking recognition of the month of March being designated as Egg Month and because a member of the State assembly in my district has introduced a bill to provide for a tax of 1 percent on poultry feed to be used for promotional work in an effort to stimulate poultry sales, I think it of interest to publish the editorial. I desire to insert the editorial in the RECORD along with my remarks.

POULTRY PROMOTION BILL SHOULD BE PASSED

At the request of Assemblyman Richard F. McCollister, Governor Knight called a special legislative session to run concurrently with the regular budget session, to permit Mr. McCollister to introduce proposed legislation to create a California poultry promotion council.

If the legislation becomes law, a tax of 1 cent per 100 pounds of poultry feed would finance work of a promotional council in stimulating the sale of California poultry products.

At the same time, Representative HUBERT SCUDDER arose in the lower House of Congress to advise the Members that March is Egg Month—and that if everyone in the United States ate an egg a day they would be a lot healthier at less cost.

"While grains are supported as an agricultural crop and are purchased by the poultryman, he in turn must sell on the open market under a free competitive system," Mr. SCUDDER said. "The poultryman should, therefore, be encouraged in every manner possible to create a demand for his product."

The Congressman followed up his talk by treating Members of the House to a double-yolker serving of eggs at lunch on March 3.

The poultry industry falls roughly into three categories: eggs, chicken meat, and turkeys. Per capita consumption of both meatbirds and turkeys has increased sharply in the last 10 years, but production in other States has succeeded in capturing the California markets and California growers as a result are having a difficult time.

Consumption of eggs, in the same 10 years, has declined from 389 per capita in a year to 360. The egg business, as a result, is also in difficulty.

It is high time, indeed, for promotion of California poultry products. Here's hoping Mr. McCollister's bill is enacted.

Frank Schaufenbil, Exemplary Labor Leader

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. LANE. Mr. Speaker, on Sunday, March 9, 1958, at Central Catholic Memorial Auditorium, Lawrence, Mass., more than 600 leaders throughout Massachusetts, gathered to honor Francis M. Schaufenbil, acting president and secretary-treasurer, United Textile Workers of America.

Among the distinguished guests were: Mayor John J. Buckley; Senator William X. Wall; Aldermen Nicholas J. Callahan; John W. Fallon; Gerard A. Guilmette and Louis J. Scanlon; Rev. Francis McDonald, Director of the Archdiocesan Labor School; Very Rev. Vincent A. McQuade, OSA, doctor of philosophy, president of Merrimack College; Kenneth J. Kelley, secretary-treasurer legislative agent of the Massachusetts Federation of Labor; Francis E. Lavigne, education director of the Massachusetts Federation of Labor; Attorney Roland R. Siskind, chairman of the Greater Lawrence Citizens Committee for Industrial Development; John N. O'Malley, executive director of the Greater Lawrence Citizens Committee for Industrial Development; and Timothy J. Scanlon, president of the Lawrence Chamber of Commerce. Also present were Hugh Thompson, George Baldanzi, and former UFWA vice president Herman Ackroyd, Johnnie E. Brown, Kenneth C. Clark, Robert E. Cole, Everett F. Dean, Roy B. Groenert, Edward Hirschberger, Burton Hyman, Joseph Krause, Roger Provost, Calvin R. Ray, Louis Rubino, Philip Salem, Frank Sogambato, William Silcox, and Charles Sobol, and myself.

John A. Callahan, president of the Massachusetts Federation of Labor was the toastmaster.

The program opened with the benediction given by Father McQuade.

Mayor Buckley and I brought greetings from the Federal and municipal governments.

John N. O'Malley made the presentation of a matched set of luggage to Mr. Schaufenbil.

The Lawrence Daily Eagle, on March 10, 1958, stated that: "attorney Siskind, guest speaker, spoke of Mr. Schaufenbil's devotion to duty, and of his many accomplishments. He praised the newly-elevated international secretary-treasurer and acting international president of the United Textile Workers of America, AFL–CIO, for his outstanding work."

The testimonial concluded with a program of entertainment, and benediction by Father McDonald.

Attorney Roland R. Siskind, one of the dynamic leaders whose initiative has contributed so much to the economic recovery of Greater Lawrence, spoke eloquently of the role that Mr. Schaufenbil played in that remarkably successful effort. It was this type of labor statesmanship that helped the workers and the community, in recognition whereof, he was called to national leadership, with a voice in the councils of international labor.

In order that Attorney Siskind's speech may have a wider audience that will appreciate and enjoy his address, I am inserting it, under unanimous consent, in the CONGRESSIONAL RECORD.

Distinguished guest, Frank Schaufenbil, Very Reverend Father McQuade, Reverend Father McDonald, Congressman Lane, Mayor Buckley, gentlemen of the city council, Senator Wall, other distinguished guests, ladies, and gentlemen:

It is indeed a pleasure to be here this evening to pay not only my personal respects to Frank Schaufenbil, but to extend from all the members of the Greater Lawrence Citizens' Committee for Industrial Development their sincerest warm congratulations for his continuing advancement in the labor world.

Most of us who have been associated with Frank have had, for many years, an innate feeling that the service and respect commanded by him in his field of endeavor would not go unrecognized too long.

Frank was born in Prairie du Chien, Wis., and was employed in a weave room of a textile mill in Prairie from 1934 to 1941. In 1939 he assisted in organizing a labor union in that mill and was elected its president. The following year he was elected president of the Wisconsin State Council of Textile Unions. In 1941 he was appointed as an organizer for the United Textile Workers of America and in the same year was elected vice president of the U. T. W. A. in the midwestern area. In 1946 he led an organizational drive in the South for the U. T. W. A. and later in the same year he was named director of the woolen and worsted department of the U. T. W. A. and was assigned to this area with headquarters in Lawrence. His work here and his eagerness to serve his organization were well known by thousands of textile workers employed in local plants.

His determination and his knowledge was again recognized in October of 1948 by President Truman, who appointed Frank to the United States Commission to the International Labor Organizations Conference in Geneva, Switzerland. He is a past councilor of the Lawrence Council of the United Commercial Travelers. In October 1957 he was the unanimous choice of the UTWA executive council for acting president and secretary-treasurer of the international union.

But, in addition to his career, he has not neglected any of his civic duties—that which is a must in everyone's life. For several years he has served on the executive committee for the united fund and on the Greater Lawrence Citizens' Committee for Industrial Development. At the present time he is a member of the executive board of that committee.

Civic pride is merely the common or garden variety of national patriotism, the kind of pride that makes a citizen feel that it is just as important to clean up his backyard as it is to head a Fourth of July parade.

The man who does not take an active interest in his hometown, who does not want to see it prosper and who will not work for its improvement or even its beautification, lacks that vital thing which makes a true patriot. We are fortunate indeed to have citizens of Frank's caliber to counteract the influence of such narrowminded men.

But even though a man has the interest of his city at heart, he can alone do little for its improvement. It is necessary for him to join with others who are likewise civic minded.

This need for cooperation has given rise in the larger cities, to the chambers of commerce, the Rotary, the Kiwanis Clubs, and like organizations, and in the smaller villages, to the booster clubs. And in our own community, this need for group participation has given rise to the many civic committees, some of which are the industrial development committee, the Burke Hospital trustees, the airport commission, planning board, traffic commission, zoning board, and so forth, and to the most recently formed task force committee headed by Mr. Richard Ward, and assisted by many able men and women of this community who are giving unselfishly of their time, effort, and money so that our downtown business area can be improved both in physical appearance and by increased retail business.

Much sport has been made of some of these groups and committees, the idea being that they exist merely as social organizations, where the members meet to exchange gossip, tell jokes, and partake of a hearty luncheon. This is slanderous, of course, but it is true that good dinners aid greatly to the success of any organization.

Associated effort, whether of the muscles or the brain, needs to be stimulated occasionally by social contact. There is a physiological reason for this. One of the great sympathetic nerves of the human system is said to be located in the stomach, and, therefore, our appetites and our sympathies are so intricately connected that when we are gathered around a well-laid table we are filled with charitable feelings toward all the world and with ambitious aspirations for our immediate community.

Any businessman is benefited by association with his competitors. Occasionally one finds a man who feels that the methods which were successful in the past must always be successful.

He is antagonistic toward innovations and then wonders why the new store on the next block is attracting customers which he had inherited from his father. But times change, new systems are adopted, new goods manufactured, and the businessman must keep pace. An automobile dealer can no longer use old methods of salesmanship any more than he can sell a 1920 model in place of a new streamlined car. The same is true in civic activities. There was a time when the only organizations a city knew, aside from its lodges and social groups, were its political circles. In the villages the only organization was a little group which met around the stove in the corner grocery to discuss everything from farmer Brown's new barn to the election of a new President.

There is an old saying to the effect that three persons united against a town will ruin it. That is not true if there is a larger group composed of men like Frank Schaufenbil, which has the good of the town at heart. It is a well-known fact that bad citizens, law breakers, are united, while good citizens are too often divided, and the bad citizens are frequently so vociferous as to give the impression that they are stronger than they really are.

In one of Billy Sunday's evangelistic campaigns it is said that he wrote to the mayor of a midwestern metropolis for the names of those who were especially in need of prayer. The mayor very obligingly sent him a copy of the city directory.

We are quite sure that few of our citizens are especially in need of prayer, but we must not be satisfied with our passive goodness. We must become more aggressive.

The country needs, more than ever, soldiers of peace, and it is here that the various civic organizations can render the greatest good. They are composed of responsible, thinking men, who have established themselves socially, financially, and professionally, and whose interests are identical with those of the city wherein they dwell. A famous military man tells us that the Nation faces a crisis in which many dangerous and insidious enemies are allied against us, the corruption and extravagances of government, and the growth of power in the underworld; that we ourselves are largely to blame for this condition because we have neglected our duty as citizens; that patriotism is just as necessary in meeting the complex problems of peace as it is in meeting the more stirring obligations of war. He adds the warning that with all our marvelous institutions we may go down like Greece and Rome unless we recognize and live up to our civic obligations. If Frank Schaufenbil by his enthusiasm and example does nothing more than to awaken the right kind of people to a realization of their duty as responsible citizens of the city, State and Nation, then he will have accomplished much. There is a place in the life of every city for many aggressive citizens and civic organizations, which seek out the needs of their municipality and vigorously apply the remedy, or render the required assistance. Any bread which we may cast upon the waters of civic betterment will return to us in the increased volume and improved character of our activity, and in the pride and joy we take in our home city.

There is one thing which is admired above all others, and that is success.

It does not so much matter along what branch of human endeavor a man's talents lie—whether art, literature, science, or business—the fact that he succeeds is all important because this fact proves that in his particular field he has greater ability than his fellow man. We respect his ability, his talent. He is a benefit to mankind, not only for his contributions to enterprises of the world, but for his example, for the inspiration we derive from him.

Many people insist that success is largely due to luck, to circumstances, not realizing that it takes sound judgment to shape circumstances to the proper end. It is true that "There is a tide in the affairs of men, which, taken at its flood, leads on to fortune." But how many of us know when the tide of destiny is at its flood?

Frank Schaufenbil tonight has met with a large measure of success, but this success is not due to luck. It is a substantial edifice founded on a solid rock of integrity and earnest endeavor, coupled with a keen perception which has enabled him to foresee opportunities and grasp them as they appeared. His success has been largely earned.

He has achieved true greatness and we rejoice that this is so. We are honored by his presence tonight and hope that our very sincere welcome and modest entertainment will give him pleasure.

It is quite customary to felicitate a man on his accession to a high office, and rightly so, for he is to be congratulated on his rise above the average worker, and he needs the good will and cooperation of his associates. But the man who most deserves this evidence of appreciation and kind regard is the one who has filled the high position, has done his work in a commendable manner, has won the esteem and respect of those who have been associated with and under him, and who is passing on to a higher position.

We feel, Frank, that you are such a man. We have enjoyed the years of close association with you. We have respected your ability and honored your integrity. Now we rejoice in your good fortune and we want you to accept this evidence of the esteem and good wishes of those who have assisted in carrying out your plans.

May the future bring you added honors and the opportunity to display the talent and ability which are yours in so large a measure.

Thank you.

Railroad Unemployment Insurance Act Must Be Amended Immediately

SPEECH
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. VAN ZANDT. Mr. Speaker, this date I have introduced a bill to extend the benefit period under the Railroad Unemployment Insurance Act from the present 26 weeks to 39 weeks with the cost of such extension to be borne by the Treasury of the United States in the same manner as President Eisenhower proposes to pay the cost of extending for 13 weeks unemployment compensation benefits in other industries.

At the moment thousands of unemployed railroaders throughout the Nation are now receiving an average of $40 a week from the railroad unemployment insurance fund and many of these unemployed persons have exhausted or are about to exhaust their eligibility for such benefits leaving them and their families without any income.

Mr. Speaker, in the central Pennsylvania area where my congressional district is located nearly 15 percent of the area's 91,000 labor force is unemployed including railroaders.

Since plans are already afoot to extend unemployment compensation benefits an additional 13 weeks in the various States to those unemployed outside the railroad industry, my bill is necessary in amending the Railroad Unemployment Insurance Act to provide an additional 13 weeks of benefits.

Mr. Speaker, my bill is emergency legislation and should receive prompt congressional approval, thus relieving the desperate plight of thousands of unemployed railroaders not only in my congressional district but throughout the Nation.

Foreign Aid a Colossal Failure—Should Be Stopped

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. GWINN. Mr. Speaker, a check of the records indicates that during the period of World War II and in the postwar period to June 30, 1957, the American taxpayers have supplied more than $134 billion in aid to foreign governments and their peoples.

Last week, at the request of President Eisenhower, there was staged at the Statler Hotel in Washington a great conference of economic internationalists and liberals to drum up nationwide sentiment for a further appropriation of $3.9 billion for foreign aid now masquerading under the name of mutual security. The foreign-aid programs which started in the postwar period and became known in 1948 as the Marshall plan to put 16 European countries back upon their economic feet, have been continued beyond the projected 4 years and an expenditure of $17 billion until today countries in every hemisphere are looking to Uncle Sam's taxpayers for handouts for all kinds of purposes from the ridiculous to the sublime.

We have been regaled with speeches and articles telling us that the only way to stop the spread of communism throughout the civilized world is to get behind the so-called free nations with American grants and credits.

Now what kind of a world is this so-called free world?

Not very many of the countries we have helped with American dollars and supplies can qualify as free nations. We should realize that there is very little of the American kind of freedom under either socialism, communism, or a dictatorship, and Mr. Speaker, these are the kinds of governments we have been for the most part supporting in the postwar period.

The meeting which was held on Tuesday, February 25, 1958, was said to have been underwrittten by a group of 15 prominent Americans. Many in this group and the firms they represent, for years have benefited either directly or indirectly by Government procurement contracts for foreign aid and the like. For example as far back as August 1948, the records of the Economic Cooperation Administration for that month indicates the firm of Anderson Clayton & Co. and their subsidiaries furnished 71.2 percent of the 207,283 bales of cotton exported under the Marshall plan, and paid for by the American taxpayers. Yet among those who are sponsors of the meeting we find Mr. Lamar Fleming of this firm a headliner.

Others who underwrote the Washington conference were: Mr. George Brown of the engineering firm of Brown & Root, Houston, Tex., who have been Government contractors for years; Mr. Abraham Feinberg of the firm of Julius Kayser & Co., manufacturers of textile products; George J. Killion of American President Lines, a steamship outfit which has enjoyed Government subsidies and contracts for years. Also among the underwriters was Frank Pace, Jr., of General Dynamics, a firm greatly benefited by Government contracts.

Then there was Mr. Ernest R. Breech of Ford Motor Co., a firm that does business all around the world and maintains a factory in England to produce small cars for the domestic and export trade. Ford Motor has benefited for years from Government contracts of various kinds and presently they are engaged in several research undertakings.

As a matter of fact, an investigation in all probability would disclose that nearly every one of Mr. Eric Johnston's committee, including Mr. Johnston himself, was a party in interest because of previous or present Government contracts or subsidies.

Over the years there has been much criticism of the waste and mismanagement that has occurred in spending to $65 billion invested in foreign aid in the postwar period. Years ago I presented some facts about the building of the world's largest railway station in Rome, Italy, with the help of American dollars. I also called attention to the waste in the canalizing of the Rhone River in France.

Mr. Speaker, the Treasury records indicate we have spent or loaned more than $65 billion in the postwar period. The Treasury records further show that we now have more than $7 billion more which can be spent in fiscal 1958 and 1959. If there is need for further aid from the American taxpayers, this in itself is an admission that the foreign-aid programs have been a colossal failure and should now be stopped. With our own public debt hovering around $275 billion and likely to go higher, I am convinced the American people want no more of this foreign aid.

Mr. Speaker, there is talk around the Capitol of reducing taxes to help stop the depression which now plagues our country. Instead of reducing taxes at this time, the Congress should first be interested in reducing the spending and then after balancing the budget, get the country back on a sound basis and by so doing a reduction in the oppressive taxing could be effected.

Mr. Speaker, as of February 21, just a few short weeks ago, the unexpended balances to the credit of the mutual security programs, or foreign aid if you please, totaled $7,465,000,000. This is more than the Treasury can make available for spending in the balance of fiscal 1958 and all of 1959 combined. Therefore, we do not need either an additional foreign aid appropriation or even a further authorization to spend at this time. In fact, with more than 5 million American unemployed and millions of others working from 1 to 14 hours a week, its time we set our own economic house in order and forget about this so-called free world which is free in name only.

At this time, Mr. Speaker, I ask that as part of my remarks there may be included in the RECORD two articles from the Washington News Bulletin giving some additional facts about how our foreign-aid funds have been disbursed and in what amounts and also important in-

formation on the wages and working conditions in several of the recipient countries compared with those presently in effect in the United States.

The bulletins are as follows:

DEGRADATION OF POPULAR GOVERNMENT CARRIED TO NEW LOW POINT AS $500,000 SLUSH FUND IS SOUGHT BY NATIONAL CITIZENS COMMITTEE FOR FOREIGN AID, A PRESSURE GROUP ORGANIZED AT THE BEHEST OF EISENHOWER

(By Paul O. Peters)

Reaction is rapidly setting in to the efforts of a group of millionaires to raise a slush fund of $500,000 to be used in pressurizing the public and Congress on the need for an additional $3.9 billion appropriation for foreign aid in fiscal 1959. The 15 persons who underwrote the rally in Washington's Statler Hotel late Tuesday were reported to be:

Mr. Ernest R. Breech, Ford Motor Co.; Mr. George R. Brown of the engineering firm of Brown & Root, Houston, Tex.; Mr. Abraham Feinberg of the firm firm of Julius Kayser & Co., textile manufacturers; Lamar Fleming of the cotton merchandising firm of Anderson, Clayton & Co., Houston, Tex.; Willima C. Foster of Olin Mathieson Chemical Corp. of Baltimore, Md.; H. J. Heinz II of the H. J. Heinz Corp., Pittsburgh, Pa.; Theodore V. Houser of Sears, Roebuck & Co.; George J. Killion of American President Lines; Frank Pace, Jr., of General Dynamics Corp.; William E. Robinson of Coca-Cola; Dr. Ethan A. Shepley, chancellor, Washington University, St. Louis; Joseph P. Spang, Jr., of the Gillette Co.; Roger L. Stevens, real estate operator, New York; and Mr. Eric Johnston who was called to Washington by President Eisenhower to head up the campaign for foreign aid.

The resentment against the procedures and methods used to get a crowd together for the rally at the Statler Hotel, which the Chicago Tribune likened to a three-ring circus, seems to stem from the fact that many of the sponsors are parties in interest and have been recipients of Government contracts and/or subsidies over a considerable period of years during which more than $153 billion was poured out of Uncle Sam's Treasury in wartime and postwar aid.

When approximately 5,000 telegrams soliciting funds for the Citizens Committee for Foreign Aid were sent out on Tuesday evening, February 25, the tab for telegraph tolls said to be around $10,000 was quickly covered by contributions from persons selected by a New York professional fund raiser for that purpose.

What has not been disclosed to the American public up to the present moment is the status of funds presently available and undisbursed for the foreign aid which now masquerades under the name of mutual security.

Here are some facts:

United States Treasury Document No. 3206, issued by the Bureau of Accounts, covering the fiscal year 1957 shows at page 17, unexpended balances for the so-called mutual security programs stood at $6,124,880,172.03. Of this amount the unpaid obligations totaled but $3,223,402,809.65, leaving nearly $3 billion available.

The budget for 1959 reveals at pages 81-92 appropriations for fiscal 1958, as follows:

Military assistance	$1,340,000,000
Defense support	689,000,000
Economic and technical aid	435,183,000
Development loan fund	300,000,000
Direct appropriation, 1958	3,764,183,000
Unexpended balance, fiscal 1957	6,124,880,172
Total	9,889,063,172

In addition to the funds available as shown in this table there also was available $297,712,629 in unused guaranty authority which is a special fund set up to encourage American business to locate or build branches in foreign countries.

In addition to the funds available for direct foreign aid, the President was voted an appropriation of $15,145,000 for fiscal 1958 for cultural exchanges and the promotion of fair trade, which included participation in an international exposition at Brussels, Belgium, starting this spring.

A review of the spending over the past 10 fiscal years would reveal that many of the sponsors of this new National Citizens' Committee for Foreign Aid have been suppliers to the United States and foreign governments in the past and it is to their financial interest to keep the pot boiling until they drain the last bit of succor from the American taxpayers that is possible.

We have heretofore shown that for the fiscal year 1958 there was a total of $9,889,063,172 available for expenditure plus contract authority of over $216,000,000.

In the period from July 1, 1957, to February 21, 1958, the Treasury statement shows that but $2,423,521,158.93 has been disbursed for our foreign-aid programs. Therefore there remained, as of February 21, 1958, an unexpended balance of $7,465,542,013.

With prospects for an unbalanced budget for fiscal 1958, and even greater prospects for deficit financing in fiscal 1959, due to the depression that has settled upon our economy, there seems no basic reason for the Congress to appropriate an additional $3.9 billion for foreign aid. Surely, it is not the intention of our lawmakers to continue the giveaway programs forever.

With a $39 billion road building program here at home contemplated and many other pump-priming schemes in the works to help lift the depression from the backs of our people, more foreign aid will have to come from either increased taxes or borrowed money. Increased taxes would no doubt cause a political turnover in the Congress that would react to the good of the Republic while borrowing money to finance foreign aid would be a further accelerator of the inflation which this nation presently is unable to check.

Tomorrow we will issue a bulletin showing that the so-called free world is not in fact free, nor do these countries have a representative popular government in which the competitive free enterprise system can operate.

FOREIGN AID HAS BEEN GOING TO COUNTRIES IN ALL PARTS OF THE WORLD THAT HAVE ADOPTED SOCIALISM, COMMUNISM OR SOME FORM OF DICTATORSHIP

(By Paul O. Peters)

When President Eisenhower persuaded Mr. Eric Johnston, the president of the Motion Picture Export Association of America, a post paying $125,000 a year salary, to come to Washington and organize sentiment for the continuation of the reciprocal-trade-agreement program and foreign aid, both of which programs are under scrutiny by the Congress, he invited a new system of lobbying by mass appeal which caused the Chicago Tribune to editorialize on the degredation of popular government.

The outcome of a meeting held on Tuesday, February 25 at the Statler Hotel in Washington, D. C., was the forming of a National Citizens Committee for Foreign Aid and later a supplementary organization called the Nonpartisan Committee for International Economic Growth.

In general the appeals to unsuspecting American taxpayers came from parties who have been beneficiaries of the foreign aid programs of the past 10 years, and in general the appeal has been to fight communism and keep in from spreading by helping other countries to maintain their positions in the so-called free world.

The Members of Congress who accept this thesis of helping the free world, need to be informed as to the kinds of governments we have been helping and also the Congress needs to be reminded that there is comparatively little freedom under either, socialism, communism or a dictatorship.

In the table which follows we present the facts with respect to foreign aid (grants and credits) extended to certain nations to June 30, 1957, and a statement showing the kind of government in these nations; there is not a free nation in the list except Western Germany and possibly Turkey:

Country	Kind of government	Population	Grants and credits to June 30, 1957
Austria	Socialist-Labor	6,934,000	$1,018,000,000
Belgium-Luxemburg	Social-Christian	9,025,000	718,000,000
Denmark	Socialist kingdom	4,393,000	281,000,000
Finland	Social Democrat	4,121,000	70,000,000
France	Socialist-Communist	43,300,000	6,067,299,000
Western Germany	Conservative	48,478,000	3,890,000,000
Greece	Independent kingdom	7,206,000	1,373,000,000
Italy	Socialist-Catholic	46,889,000	2,829,000,000
Netherlands	Socialist-Labor	10,808,576	1,017,000,000
Norway	do	3,343,000	291,000,000
Spain	Benevolent dictator	28,306,000	213,000,000
Sweden	Socialist-Labor	7,126,000	106,000,000
Turkey	Democratic republic	20,935,000	510,000,000
Yugoslavia	Communist dictatorship	16,850,000	802,000,000
Czechoslovakia	do	12,340,000	191,000,000
Poland	do	24,977,000	418,000,000
East Germany	Communist	17,313,000	17,000,000
Hungary	do	9,808,000	11,540,000
U. S. S. R. (Russia)	do	109,279,000	426,000,000
England	Conservative-Socialist	50,367,741	6,842,000,000
Israel	Zionist republic	1,675,000	432,000,000
Saudi Arabia	Dictatorship	6,500,000	19,789,000
Egypt	do	20,729,000	72,000,000
Iran	Royalist-Constitution	19,151,000	301,000,000

SUMMARY

Twenty-four countries different governments received $27,915,628,000.

The grants and credits shown for the respective countries listed in this study are exclusive of military grants and credits for NATO and SEATO.

In a recent study of the economies and governments of several European countries, Mr. Glenn Green, representing Dr. George S. Benson, director of the national education program of Searcy, Ark., reported on comparative wages, work hours, and monthly income in European countries as follows:

Country	Industrial wage per hour	Work week	Monthly income yearly average
Austria	$0.29	48	$57
Belgium	.52	48	98
England	.54	48	103
France	.35	48	72
Germany (Republic)	.52	48	99
Italy	.32	48	61
Norway	.78	48	140
Netherlands	.45	48	80
Sweden	.89	48	152
Yugoslavia	.16	48	32
United States	2.10	40	350

This table should be a powerful argument against both foreign aid and the renewal of the Presidential authority to reduce tariffs under the so-called reciprocal trade agreements.

The downtown stores in Washington, D. C., feature many items imported from the countries listed (including wines, liquors, and other beverages), all of which are produced with labor drawing wages far below the amounts required to maintain the present American standard of living; and it must be recognized that for the most part the grants-in-aid of agricultural commodities to these countries act as subsidies to maintain their present living standards and prevent general dissatisfaction among the people of these nations with their economic conditions and their governments as well.

George Washington's Farewell Address enunciated the best policy for the United States.

Tribute to William H. Putnam

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 6, 1958

Mr. MAY. Mr. Speaker, in these days of domestic and international tension, it is fortunate indeed that our land is blessed with leaders whose vision and courage transcend the troubled events of the era in which we live. Such a leader was William H. Putnam, of Hartford, Conn., who passed to his reward on March 10, 1958, a direct descendant of one of the early settlers of our land, Israel Putnam.

William H. Putnam's great forte was his ability to achieve and inspire members of both political parties to constructive action. Throughout his life the betterment of his community has been uppermost in his mind and his joy was commensurate with the degree with which his city and his State and his country progressed spiritually as well as materially. Through enlightened nonpartisanship he was the catalytic agent which precipitated constructive community action. This great man leaves a glowing path for all to follow in striving for a better life for our countrymen and for humanity. For William H. Putnam, nothing was impossible. The greater the scope of the project envisioned, the greater his enthusiasm and the quicker it was brought into reality through his faith, his determination, and his inspiration.

We of the city of Hartford, the State of Connecticut, and the Nation owe Mr. Putnam a debt of gratitude. I submit that he is one of the greatest men ever produced by our country although his fame did not attain national recognition.

The following article which appeared in the Hartford Courant on March 11, 1958, will give an insight into his brilliant career:

W. H. PUTNAM, 80, DIES; LEADING CIVIC FIGURE

William Hutchinson Putnam is dead.

A leading civic figure for more than 40 years and the moving force behind Hartford's redevelopment and bridge-building program, he died Monday afternoon at Hartford Hospital of an acute internal hemorrhage. He was admitted to the hospital last Thursday, failed to rally after an emergency operation Saturday and died at 4 p. m. Monday.

Just a little more than a month ago, on January 30, Mr. Putnam was honored on his 80th birthday anniversary as Hartford's No. 1 citizen at a testimonial dinner attended by some 800 government, business, and civic leaders.

FUND IN HIS NAME

The William H. Putnam medical research fund was initiated at this time with the presentation to Mr. Putnam of checks totaling $10,300. The fund, to be administered through the Hartford Hospital board of directors, honors Mr. Putnam's work in obtaining a modern structure for the hospital.

As another memorial to Mr. Putnam, a bronze plaque, to be mounted near the Founders Bridge approach, was unveiled at the dinner. The plaque was inscribed, "In recognition of the lasting contributions to better life in greater Hartford by William H. Putnam."

A stockbroker who was still active as senior partner of Putnam & Co. at the time of his death, Mr. Putnam was probably best known in recent years for his work in promoting Hartford's multibridge plan and in obtaining funds for the bridge construction.

On October 15 of last year, Mr. Putnam was the first to drive across the newly opened Windsor-South Windsor Bridge, marking fulfillment of the first part of his five-bridge dream. He also participated in dedication ceremonies when the Founders Bridge opened 2 days before Christmas.

Summing up Mr. Putnam's achievements at the January testimonial dinner, Oliver B. Ellsworth, president of the Riverside Trust Co., acclaimed him as a stalwart in public finance and benefactions.

"We know him," Ellsworth said, "as a builder of highways and bridges to bring regional and municipal Hartford closer together * * * for his vision, courage and patience * * * and unending effort to open new horizons for our city."

Although Mr. Putnam's public service career began 42 years ago, it was felt by many that the scope of his service increased with the years.

Only recently, a reporter asked him why he was often seen driving around the countryside early in the morning.

Mr. Putnam answered, "I like to ride around and look at the area in and around Hartford, figuring out how we can improve things and build up the city."

CONNECTICUT NATIVE

He was born in Brooklyn, Connecticut, February 1, 1878, and, with the exception of a few years early in his career, spent his entire life in his native State.

Following his education in public schools; Mr. Putnam became a clerk in the Windham County National Bank in Danielson, a job he held for 7 years until 1902 when he switched to life insurance selling. Two years later, he entered the profession that was to be his for the rest of his life. He became a bond salesman in Boston in 1904, and a year later returned to Connecticut as a representative of William A. Read Co. of New York.

In 1912, he became a partner of the firm of Richter & Co., the forerunner of Putnam & Co., of which he became senior partner in 1921.

Mr. Putnam's active participation in Hartford's civic life began in 1916 when he was appointed a member of the finance committee of the City of Hartford. He served on the committee until 1922.

From this time on, municipal finance and Mr. Putnam's name were almost inseparable.

"It is uncertain," Ellsworth stated at Mr. Putnam's testimonial, "just how much public money he has diverted into good works over the years, but a conservative estimate probably would be about $100 million.

HAD POLITICAL INTERESTS

"As a financial man," Ellsworth continued, "Bill Putnam has not always run true to the normal conception of financier. In fact, at times, he has shown almost a sacrilegious scorn of the money argument when it has been used to delay or hamper any of his public works."

Mr. Putnam also gained prominence in these early years as State chairman in 1917–19 of the World War I Liberty Loan Commission. During the war years, he directed the floating of five liberty loans in Hartford.

Mr. Putnam also took an interest in politics in the rough-and-tumble era of political battling and during several campaigns served as chairman of the ways and means committee of the Republican State Central Committee.

While he always claimed that he didn't know anything about politics, he was considered a shrewd behind-the-scenes operator, who could out-maneuver the most astute politician while protesting his innocence in political dealings.

Mr. Putnam once listed his principal interests as "Hartford Hospital, Hartford parks and horticulture, education of women at Connecticut College, major improvements in the city of Hartford, and the welfare of its citizens."

HEADED FLOOD COMMISSION

His interest in parks brought him appointment to the board of park commissioners in 1931. He served on the commission for 17 years and was twice its president. He was later named a member of the Royal Horticultural Society of England.

Mr. Putnam took an active part in relief work when he was asked in 1939 by former President Hoover to head the Finnish Relief Fund in Connecticut. In this position, he organized volunteers to carry out the relief work.

His philanthropic activities also included membership on the board of directors of the Community Chest, which he helped found, and a term as president of the local community chest.

Mr. Putnam's association with Hartford Hospital began when he was named director and member of the executive comittee in 1934. He was president of Hartford Hospital for 7 years and also served as chairman of the board of directors.

Mr. Putnam took special pride in his association with the Hartford Flood Commission, of which he was named chairman in 1936, by the late Mayor Thomas J. Spellacy.

WAS COLLEGE TRUSTEE

He came to the commission in the days when the Connecticut River periodically stormed over its banks and when patrons of the Hotel Bond were delivered to the lobby by rowboat. The flood commission built dikes and made possible the conduit highway into the center of teh city and the North Meadows Highway.

When the Hartford Redevelopment Commission was established to increase the city's accessibility and business opportunities, Mr.

Putnam was chosen to direct it. Hartford's redevelopment between Market Street and the Connecticut River now in progress is felt to be largely the product of Mr. Putnam's perseverance in this area.

In the field of education, Mr. Putnam served as trustee and chairman of the board of Connecticut College for Women and as a member of the board of trustees and one-time chairman of the board of Suffield Academy.

He received an honorary master of arts from Trinity College in 1942 and an honorary doctorate of humane letters from Hillyer College in 1955. He has also been honored by the order of the Sons of Italy in America and in 1956, he received a "boss of the year" award from the Greater Hartford Junior Chamber of Commerce.

LEAVES TWO SONS

He was a director of St. Francis Hospital and a vestryman at Hartford's Trinity church for 25 years. He also was a member of the board of trustees of Horace Bushnell Memorial and of the New York stock exchange and a director of the children's museum and Hartford Special Machinery Co., as well as a member of the Society of Cincinnati of Connecticut, Society of Colonial Wars, the Mayflower Society and Society of Founders and Patriots. He was a 32d degree Mason and a Shriner.

His club membership included the Hartford Club, Union League, Century Association, in New York, and the Tobique Salmon in New Brunswick, Canada.

He married Adabelle C. Lyon on March 8, 1899. She died April 17, 1944.

He leaves two sons, Lyonel H. Putnam and Albert D. Putnam, both of Hartford; a daughter, Miss Marcella R. Putnam of Hartford; two grandsons, William H. Putnam II of West Hartford and Douglas T. Putnam of Cambridge, Mass.; and a granddaughter, Mrs. Robert G. Perry, Jr., of West Hartford.

Funeral services will be held Wednesday at noon in Trinity Episcopal Church. Burial will be in the family plot in the churchyard of Old Trinity Church, Brooklyn, Conn. The James T. Pratt Co. is in charge of funeral arrangements.

Protect States Water Rights

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. DIXON. Mr. Speaker, following are some of the statements made on the subject of States water rights by vitally concerned groups:

Utah Wool Growers: "We stoutly affirm and support the theory and practice of State ownership of and all water originating within that State's boundary. We earnestly condemn any and all efforts to change or confuse the theory of rights."

National Cattlemen's Association:

"Whereas for nearly a century it has been the settled rule that Western water rights are dependent on and determined by State law; and

"Whereas since 1866 Congress has recognized such sovereign rights; and

"Whereas said State water rights are now in jeopardy because of the decision of the Supreme Court of the United States in the Pelton Dam case: Therefore be it

"*Resolved*, That we urge Congress to pass S. 863, which would by law reaffirm the rights of the States to control, supervise and adjudicate their water."

Gov. George D. Clyde, Governor of the State of Utah: "Advised S. 497 has been amended by House Public Works Committee to strike Senate approved proviso which required compliance with State water rights. Deletion recommended by Justice Department. Urge your immediate effort to restore proviso."

A Nation Changed in the 100 Days

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. DINGELL. Mr. Speaker, one of the most remarkable legislative episodes in history began here 25 years ago yesterday. It has been called The First Hundred Days, and it marked a New Deal for the American people—a basic change in our philosophy of government.

For the first time an American Government actively accepted its responsibility to protect its people, to stop a depression in its tracks, to restore confidence, to create jobs, to recognize, in the words of Franklin Delano Roosevelt, the "social duty" of Government to guarantee people the opportunity to earn their living by the sweat of their brow.

The bank holiday, begun on the day following President Roosevelt's inauguration, ended 10 days later. On March 14, 1933, the Washington Star reported:

The Washington public today poured unprecedented deposits into the 20 banks licensed to reopen on an almost normal basis under approval of the Federal Government. The banks were swamped with customers opening new accounts in what was described as the most remarkable banking day in the history of the city.

Thus did vigorous action begin to disperse fear.

I was a small boy during this remarkable 1st session of the 72d Congress. My father was one of those early New Dealers, and I can recall his intense pride in the powerful effort of the administration and the Congress to drive away the black depression which had paralyzed our people.

It was Dad's great satisfaction, as a Member of Congress, to have sponsored section 7 (a) of the National Recovery Act, which recognized the right of workers to organize and to bargain collectively.

The Nation remembers those days with the fondness reserved for times of great courage. I have the honor to insert here in the Appendix of the CONGRESSIONAL RECORD an article by Mr. Relman Morin, of the Associated Press, taken from the Washington Star of Sunday, March 9. It is called A Nation Changed in the 100 Days:

A NATION CHANGED IN THE 100 DAYS

(By Relman Morin)

When he took the oath of office, the President's hand lay on the passage in the Bible which begins, "For now we see through a glass, darkly * * *."

Darkness covered all of America that day, black shadows of fear and uncertainty. "Nobody knows how far this thing will go," men were saying. A crisis atmosphere brooded over the inauguration, a sense of urgency.

Indeed, Franklin D. Roosevelt immediately invoked the wide powers provided in the Trading With the Enemy Act. He also summoned the 73d Congress into special session.

On March 9, 1933—exactly 25 years ago—the 2 Houses convened. So began the 100 days, the most extraordinary legislative period the Nation has ever known. With unbelievable speed, measures of vast consequence were rushed into law. Measures which otherwise would have gone through years of study and debate were telescoped into a little more than 3 months.

When the 100 days ended, an era of American life ended, and a new one began. The Federal Government entered a very different relationship with the individual. To some, the actions taken represent progress, to others socialism.

HOW THINGS WERE

A whole generation of Americans has grown to maturity with no direct knowledge of the great depression. It was like a blight, mysteriously spreading from mid-America to both coasts.

Did it come from abroad, as some economists said? Was it a result of farm surplus? Or the market inflation and subsequent crash? Or banking practices? Or was it simply affirming the theory that the American system is chained to cycles of boom and bust?

Whatever the answer, the United States was sick, quite sick, when the 100 days began. Every bank in the country was closed. In February, before the bank holiday, the rate of withdrawals of gold and currency shot up from $5 million a day to $15 million.

The holiday caught many people without cash. An employer might issue due bills on the grocery store in lieu of the payroll. In some places, scrip circulated, pieces of paper backed by nothing but mutual trust.

"Thousands of Americans Stranded Abroad," said a newspaper headline.

At home, breadlines coiled around whole city blocks, serpentines of shuffling men, dazed, beaten, shamefaced, or defiant.

Men—and women, too—sold apples on the corner, or panhandled. The standard appeal, "Brother, can you spare a dime?" would soon become the title of a popular song.

City governments defaulted on employees' payrolls. The shuttered bank, the cold factory chimney, the silenced freight yard—symbols of at least 13 million unemployed and probably more.

But there was a more disquieting symbol—the knot of hard-eyed farmers, some with shotguns, blocking the sheriff when he came with a court order to foreclose.

Was the Nation on the brink of revolution? Not in any organized sense. Yet hunger bred lawlessness. Frances Perkins, the new Secretary of Labor, quoted a railroad president as saying: "If a man whose family is hungry steals, I can't blame him. I think I would do the same."

Bitter, sardonic letters appeared in the newspapers. One in the New York Times, signed "Virginia Leffingwell," said the depression had taught her a valuable lesson. "I shall never again practice economy. I shall spend every cent. * * *"

On the eve of the 100 days, William Hard wrote in the Washington Star:

"The country and the Congress do not want Mr. Roosevelt, as President, to query. They want him to command. He therefore will."

It was an accurate statement.

THE ACTION BEGINS

The first bill—the Emergency Banking Act—was finished, introduced in Congress, passed, and signed into law, all in the first day of the 100 days.

In scope, it was gigantic. It gave new powers to the Treasury, the Comptroller of

Currency, the Federal Reserve, the Reconstruction Finance Corporation. It affected transactions in credit, currency, gold, silver, and foreign exchange. It provided penalties for hoarding or exporting gold. The House passed it unanimously and the Senate vote was 73–7.

The very next day, March 10, a second bill—the Economy Act—was ready to go up to Capitol Hill.

Since it provided, among other things, cuts in war veterans' pensions, the act had somewhat rougher going. But the House passed it March 11 and the Senate March 15.

Meanwhile on March 12, there was the first fireside chat. For 20 minutes, the President spoke in informal language, "I want to talk for a few minutes with the people of the United States about banking."

The next message to Congress—on amending the Volstead Act to legalize wine and beer—was only 72 words long. There was no trouble in either House.

Week after week, in rapid rhythm, Congress received and passed new laws. They touched almost every segment of the economy.

Some statistics indicate the wide range of problems:

Unemployment: The Department of Labor showed 12,830,000 jobless out of a total working force of 51,840,000. Nearly one-quarter.

Banking: From 1930 to the eve of the 100 days, 5,504 banks had closed. Their total deposits had been $3,430,000,000.

Agriculture: Farm prices had fallen 56 percent since 1929 and gross income from $17 billion to $5,240,000,000.

Railroads: Of 138 class A carriers, 38 showed a profit for 1932, 55 had earned operating expenses but not enough to meet fixed charges, and the other 45 had not met operating expenses.

Federal finances: Estimates of anticipated revenue fell nearly a billion dollars short of the budget estimate of $3,450,000,000. The national debt was over $20 billion, of which $11,345,000,000 in long- and short-term obligations was redeemable within that year. (The Economy Act carried the astonishing title, "To Maintain the Credit of the United States Government.")

Congress adjourned June 16. By that time, it had passed a farm bill, set up the Tennessee Valley Authority, established the Civilian Conservation Corps—which authorized the employment, largely on reforestation projects, of 250,000 men between the ages of 18 and 25—passed other relief, employment and financial measures, and had enacted the National Industrial Recovery Act.

Of all the measures, none excited more controversy that NIRA. It brought the Federal Government into the rough-and-tumble of business competition. When it became law, a correspondent wrote:

"At 10 o'clock this morning, the United States abruptly departed from the economic system that had grown up without change during the entire existence of the Nation."

There was a short provision, section 7–A, in the act which said in part, "Employees shall have the right to organize and bargain collectively through representatives of their own choosing. * * *"

NIRA later was declared unconstitutional, but section 7–A became the basis for a whole body of labor-management legislation.

At the end of May, the administration took stock. From questionnaires to 22 key industries, the Commerce Department reported:

Gains in steel operations, compared to the last half of March. Production and sales of automobiles 22 percent higher than the same period for 1932.

Cement and motion pictures were down from 1932. Wheat and meat prices had risen. The stock market had made some gains. There was much better feeling in the farm machine industry.

Brewers, in business again, said they were planning to spend $22 million on the east coast, and expected to create 300,000 jobs.

Had public confidence been restored? Observers disagreed.

WHAT IT MEANS TODAY

What do the 100 days mean to us today?

Banking practices were radically changed, most financial men believe for the better.

Section 7–A of NRA became the basis for the Wagner Act and other labor-strengthening legislation. The results are fiercely disputed.

Dispute rages too, over the farm laws that grew out of the AAA, and over the TVA, and other Government-developed projects.

What about the overall impact, the impact on philosophy?

Raymond Moley and Rexford G. Tugwell, both members of the original brain trust would debate that.

Mr. Tugwell cited, as some prime results:

"We have the floor which exists under the whole social-security system. We never can have a 1929 again because we will never have a situation in which people are hungry. That is something new in our time.

"We no longer accept the defeatist point of view which existed at that time. Nobody who was in power believed you could do anything about a depression. As a matter of fact, they didn't believe it was any of Government's business."

Mr. Moley, however, sees the results in this way:

"We have a planned economy generally. We have the theory that Federal spending is the way to get out of a depression. The excesses in giving relief were greater in 1950 than they were in 1932.

"He (Roosevelt) believed in the collectivist theory that the way to stimulate purchasing power, or to stimulate purchasing, was to give more money to people."

Mr. Tugwell says:

"We argued that you had to have an economy in which there were groups who could be each other's customers, or else the other fellow wouldn't be producing, and you would have unemployment. Each group had to have enough income to buy the other fellow's goods. The President called it a concert of interests."

Mr. Moley says that the chief immediate result of the legislation of the period was the deterioration of individual initiative because of some of the excesses. That led to the theory, as Harry Hopkins set it out, that the way to political success was "tax-tax-tax, spend-spend-spend."

Mr. Tugwell says:

"What's the use of talking about personal initiative? There was a breadline stretching around the block. Those men wanted to work, and we were feeding them."

THE 100 DAYS

March 9: Emergency Banking Relief Act.

March 20: Economy Act. It was designed to help balance the budget by saving of $500 million in Government expense.

March 22: Beer-Wine Revenue Act amended the Volstead Act to legalize wine and beer.

March 31: Civilian Conservation Corps Reforestation Relief Act.

April 19: Gold standard abandoned.

May 12: Federal Emergency Relief Act created an agency authorized to allot $500 million in direct relief to State and municipalities.

Agricultural Adjustment Act.

May 18: Tennessee Valley Authority established.

May 27: Federal Securities Act, designed to provide investors with information on new securities.

June 5: Gold repeal joint resolution, cancelled the gold clause in Federal and private obligations, and made contracts and debts payable in legal tender.

June 6: National Employment System Act authorized a Federal employment service in cooperation with the States.

June 13: Home Owners Loan Corporation created to refinance home mortgage debts.

June 16: Glass-Steagall Banking Act created Federal Deposit Insurance Corporation, guaranteeing bank deposits under $5,000 and extending powers of the Federal Reserve Board.

Farm Credit Act, designed to facilitate credits for agricultural production and marketing, thereby refinancing farm mortgages.

Emergency Railroad Transportation Act, aimed at promoting financial reorganization and the study of improvement methods.

National Industrial Recovery Act established codes for business competition operating under Government supervision and guaranteed labor's right to organize and bargain collectively.

Title II of the NIRA established the Public Work Administration and authorized a fund of $3.3 billion for construction.

The President of a Medical Society and a Leading Nurse Educator Agree—What This Country Needs Is a Good 2-Year Trained Bedside Nurse, With Dignity of Status, and a Living Wage

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mrs. BOLTON. Mr. Speaker, as one who has worked for many years with nurses and other personnel intimately associated with care of the sick, I am asked, again and again, What can be done to remedy the nursing shortage? And as a legislator who has voted for Hill-Burton Federal-State matching fund legislation to increase hospital beds across the country, I am asked why, in the face of wards being closed for lack of nurses, the Federal Government is not doing something about the crucial need for 50,000 more nurses now. Of course, the Federal Government is doing something for nurses. Among other things it is giving traineeships for the advance study of teachers, administrators, and supervisors of nursing. Essential as these grants may be, however, the vital question is, Do they represent any sort of solution to the nursing dilemma?

The causes of the shortage lie deeply imbedded in practices and methods. Although more girls than ever are going into nursing, too many are leaving during and after training. Is the 3-year training period too long? What about compensation? If low pay by comparison with other occupations is causing many to leave for other more lucrative work, where is the money coming from which will permit their pay to be raised to a level which will make nursing attractive?

Is there sufficient job satisfaction? Are their skills being properly utilized? Why are nearly a fifth of the active registered nurses in the United States practicing private duty because it is the only branch of nursing left where a qualified

nurse can give total patient care at a professional level, with job satisfaction? Is too much administrative and other responsibility not associated with patient care being heaped onto too many young women who do not want it, who want only to care for the sick at the bedside?

These are but a few of the unanswered questions which led me during the last Congress to introduce a bill calling for a national commission on nursing services. It would have brought together a group of nurses, doctors, hospital administrators, educators, economists, representatives of government and—not to be forgotten—those who are the recipients of nursing services, the patient public.

The joint recommendations of such experts could have brought national attention to the total picture of patient need. They could have spoken not for doctors, nurses, or hospital authorities as such, but for and on behalf of the public which is in need of more and better nursing care.

As my colleagues know, this bill was killed in committee, in large measure by leaders of the nursing profession who feel that whatever problems exist can be solved by their own efforts.

In this connection, the findings of a questionnaire which I sent out last year to 12,000 nurses is interesting. To the question whether the problems which interfere with nurses giving adequate nursing care could be solved by nurses alone, 2,219 said "No"; only 112 said "Yes." I asked what groups would be needed to help solve the nursing dilemma. They put hospital administrators at the top of the list.

Mr. Speaker, so that the Congress may have the benefit of some expert points of view on the nursing situation, I ask unanimous consent to include with my remarks an article written by Miss Edith A. Aynes, professional education division, National Foundation for Infantile Paralysis, which appears in the March issue of Modern Hospital. It explains the four-way squeeze which nurses are caught in today, and relates a spirited debate on many issues facing the profession between a medical authority and a nurse educator.

WHAT WE NEED IS A BEDSIDE NURSE

If Florence Nightingale came back to life and went to work in a modern hospital, a student nurse said recently, she'd have somebody else carry her lamp.

Nurses who think this is an exaggerated view might consider a recent survey indicating that only 30 percent of nursing personnel in the group of hospitals studied were graduate nurses—and more than one-third of the graduate nurses were in administrative or teaching, rather than nursing, assignments.

Caught in a four-way squeeze with the demands of doctors, nurses, nurse educators, and patients pressing them from all sides, some hospital administrators blame nurses themselves for everything that is wrong on hospital floors. Others blame the Government, or industry, or hospitals without schools, which use but don't train scarce nursing talent. Still other administrators simply look the other way where patient safety is concerned and hire women they call nurses, rationalizing that a white uniform and some kind of nurses' cap is all that is required to attend patients.

With a little urging, both doctors and hospital administrators will admit that their most pressing patient care problem revolves around the nursing shortage, and they acknowledge that the greatest single item of cost in their hospitals is for nursing service. If they are completely honest, they will then tell you that even with the sums allocated to nursing service personnel, their patients are receiving the poorest nursing care in the recent history of hospitals.

Nurses will tell you, if you ask them—and listen to their answers—that hospital nursing is the least satisfying of all kinds of nursing available to them today.

Why?

I would like to start with a conversation I had recently with the president of a State medical society in the Middle West.

This doctor and a number of his colleagues handle the medical needs of a small city, and they patronize the local hospital. His problem was not new, nor were his feelings about organized nursing. What was new was his willingness to discuss—and I mean listen as well as talk—the problem in terms of nurses and nursing needs as well as the needs of doctors and hospital administrators.

His first point was that the accreditation of nursing schools was causing many small hospitals to close their schools, thus eliminating the student labor so important to the operation of the small hospital already overburdened with expenses. I countered with the timeworn rebuttal of protecting standards for the student who is seeking an education.

"But all we want are bedside nurses," he reiterated. "We don't want these highly educated women. Oh, of course, you need a few, but they aren't content to give the service we need."

I conceded that point, but asked about the student.

"Do you think you can get the high-school girl of the caliber you want to enter a training school, work for 3 years in a nonaccredited school for practically nothing, and wind up at the end of that period with a diploma that blocks further education, keeps her from working in better places—keeps her from civil service jobs, from jobs in industry, public health, and the service nurse corps?"

"I can fill my hospital right now with 25 girls who would be content with that kind of training," he said earnestly. "They want this kind of an education, and this kind of work."

"I can't believe it," I said. "If they were content with that level of education, they would go into practical nurse schools. Why don't you start one of those?"

"Because practical nurses aren't trained enough for what we want," he said simply. "You can't expect a practical nurse to give an intravenous."

"In other words, what you still want is a nurse who can take a doctor's responsibility with nothing but on-the-job training and very little pay."

"No, not that at all," he said patiently. "What we want are good, safe, beside nurses who are content to stay at the bedside."

Four hours later we found we were in practical agreement:

What this country needs is a good, 2-year-trained bedside nurse with a title that will permit her to stay at the bedside with the dignity of status and a living wage. A trained nurse with more technical training than a practical nurse's 1-year course allows, but with a course condensed from the 3-year curriculum that now graduates a product expected, upon graduation, to know not only bedside nursing with all its intricate specialties, but the art of teaching, training, and supervising everything from a bedpost to contemporary graduates. Then, in addition, she is expected to reveal the management skills required by the hospital administrator who holds her responsible for the economical use of supplies, the fire regulations, the time schedules of personnel from the maid to the graduate staff, the supervision of the hospital at night, and the narcotic count.

What is needed, it seems, is a 2-year-trained bedside nurse who can safely and independently carry out the doctors' orders, but who is not to be saddled with anything administrative. She is not to be put in charge of a ward, a department, a group of patients, of time schedules, of handling personnel or equipment, of teaching the nonprofessional in or out of the classroom; of heading patient care teams for critically ill patients. She should not have such responsibilities unless she herself desires to change her status and is willing to take further education in a formal classroom to supplement her technical nursing skills with the management skills required for such leadership positions.

My medical friend was right. He could fill his hospital with women who prefer nursing patients to nursing leadership headaches. Seventy-two thousand (nearly 18 percent) of the active registered nurses in the United States are practicing private duty because it is the only branch of nursing left where a qualified nurse can give total patient care at a professional level—with job satisfaction.

So our 2-year-trained bedside nurse would be an operator—not a chief operator.

"But she will still be an R. N." my friend said.

"No," I almost shouted. "Let's not confuse the picture any more. She must not be confused with either the professional nurse or the practical nurse, but she must be required to pass a licensing test by the State, not only for the protection of the public, but as a means of establishing her educational level. She must be recognized as a fully qualified, trained, bedside nurse."

Promising a student a white cap, a white uniform, and an R. N. after her name is almost a requirement to obtain students for any professional nursing school, regardless of what kind of diploma she gets. In order to attract anybody these days, you've got to promise them something. Just as the military did in World War II:

"Join the WAC—save the wounded—replace registered nurses."

When the emergency developed, the military had to make the best of what it could get. Women who served medical needs in the WACS, the WAVES, the SPARS, the Marines, and the Red Cross nursing programs wanted to help, and they did help. But they would have been happier and more effective if they had had some training and organization before they were flung into hospitals and clinics—with sometimes downright unfriendly doctors and nurses to look to for guidance.

You can't use mirrors to take care of people in a military hospital, any more than you can use mirrors in a civilian hospital. It takes trained people.

In the armed services, the people giving nursing service to patients are divided into several categories: officer nurses, enlisted men and women, civilian employees under civil service—both graduate nurse and nonprofessional, Red Cross nurse's aides, volunteers and others.

In civilian hospitals, the people giving nursing service to patients are also divided into several categories: professional nurses, practical nurses, student nurses (both professional and practical), attendants, nurse's aides, ward maids, orderlies, volunteers, and others.

Ward maids and orderlies correspond nicely to the untrained soldier or Wac; the nurse's aides and attendants are comparable to their counterparts in the military and to the hospital corpsman, and the medical tech-

nician compares with the on-the-job trained practical nurse.

Essentially the military has the same nursing problem as the civilian hospital—only the military is more complicated. Where the civilian hospital has only a board of trustees to convince, the military hospital has the whole Government making decisions that affect it, and military doctors—being civilian trained—are just as unfamiliar with nursing problems as are their civilian colleagues.

"We don't want a bunch of blankety-blank generals," a colonel-doctor roared at me during a Regular Army nurse commissioning session a few years ago. "We want some bedside nurses."

Yet the Army—presumably with the approval of doctors—established the Army Nurse Corps more than 50 years ago on the basis of one nurse to 10 beds: teachers of nursing to supervise the care of the sick. Soldiers were supposed to benefit from their training. Nobody ever explained to those early graduates of Florence Nightingale schools that they were teachers. With the backing of the medics and civilian nursing, the Army nevertheless commisioned the products of State-approved civilian schools of nursing, regardless of the educational standards of the school involved. With the full support of the American Nurses Association and at least the tacit approval of the American Medical Association and the American Hospital Association, graduate, registered nurses from some of the smallest schools in the United States as well as the largest, are commissioned as potential leaders on the same basis, with the same pay, privileges and responsibilities, as leadership candidates from West Point and the ROTC programs.

Whether anybody likes it or not, or approves of it or not, the hospitals in our economy and other agencies needing nurses have only one source of supply for graduate registered nurses—the eleven-hundred-some-odd civilian schools of nursing. All these schools of nursing, whether they are attached to a 10-bed hospital without an instructor, a 50-bed hospital with one half-time or full-time instructor, or to the largest universities in the country, issuing degrees instead of diplomas at graduation, produce only one level of worker—the nurse who takes the State board in her own State and becomes a good, bad, or indifferent registered nurse—a professional nurse.

Right now it matters little where the nurse works or from what school she graduated, she finds herself in a position where she must work with subordinates. In theory, since she is registered by the State, she is a better bet than the attendant hired away from the local ice-cream factory, and presumably she is capable of safeguarding the medications and treatments ordered for patients under her surveillance. But, just as in the case of the 1-nurse-to-10-beds ratio in the Army 50 years ago, she isn't supposed to let on that she knows this is her function. By some funny scheme, the nurse is supposed automatically to take care of all the patients that need her attention, and leave alone those who do not. She is automatically supposed to satisfy all the demands of the medical staff that need her level of assistance and stay out of the way for the rest. She is supposed to keep all the administrative matters under control that her crystal ball tells her the hospital administrator wants her to handle, and leave the others strictly alone.

All this she is to do without much guidance. The lack of communication and feedback between the top level of hospital administration and the nurse who is working at a foreman's job is appalling. Why should a hospital administrator listen to what a general duty nurse has to say? In the eyes of the doctor or the hospital administrator, a nurse is a nurse. Nurse's aids, practical nurses trained or untrained, attendants—anybody with a uniform—can be a nurse. If nursing leaders want to provide better qualified head nurses and supervisors and think they should educate to that level so professional nurses will be professional in fact, as well as in fancy, the doctors and hospital administrators shout: "We don't want a bunch of blankety-blank generals. We want some bedside nurses."

For a few years following World War II when the military need had jumped from 639 to 57,000 graduate registered nurses—I was optimistic that something constructive would come out of the nightmare we had gone through. Even after the war, civilian hospitals, scraped to the bone, were relying on student nurses and overworked graduates to take care of civilian patients. The situation approached chaos. Surely, I thought, somebody would do something to make sense out of the whole mess before we got into another international misunderstanding.

But everybody has been too busy. Men who learned tricks about hospital administration in the medical administrative corps scurried out to get administrative jobs in civilian hospitals. Doctors who learned about new medications and new surgical techniques scurried out to establish themselves in the best possible places in civilian communities.

Nurses, appalled at the confusion and turmoil and the lack of understanding that surrounded their efforts in both military and civilian hospitals, returned to classrooms wherever they could to try to learn the techniques of teaching nonprofessionals and the intricacies of administration, so they might make some sense out of their own profession. But nurses not only went to school, they went into public health, school programs, industry—anything that would keep them out of hospital wards.

Why?

1. Because hospital administrators, with their newly found stature, would not concede that anything administrative belonged in the jurisdiction of the nurse. She should just take care of patients.

2. Because doctors would not concede that anything professional belonged in the jurisdiction of the nurse. She should just take care of patients.

3. Because nurses, faced with both administrative and professional problems in the care of patients, had little backing and no authority to recommend organizational changes or even to complain effectively about things as they were.

Today there are flocks of untrained people under foot on hospital wards who are not capable of giving safe nursing care to patients, people who are encouraged by both doctors and hospital administrators (and a few nurses) to do procedures that nurses with consciences feel are too dangerous for untrained or semitrained people to perform unsupervised. The bulk of the nurses are not trained as teachers, they are not trained as supervisors, and they do not want to accept the nursing-care responsibility for patients when there are too few trained people to help them. They feel that any person in contact with sick patients should be conversant with new technics, new drugs, new equipment, and know the effects on the human body of such drugs and treatments. When the workload becomes impossible for them to give or even supervise the nursing care themselves, they seek work elsewhere—where a conscience off duty can rest.

After 4 hours of discussion, the president of the medical society and I were in complete agreement: What this country needs is a good, 2-year trained bedside nurse. A trained nurse who, upon completion of her training, would not be a head nurse or a supervisor; would not be a public-health nurse, or an industrial nurse, or a nurse anesthetist, or an operating-room supervisor, or an educator—and she would not be eligible for a commission in the Armed Forces.

This trained bedside nurse would have an in-between status of her own—something like a warrant officer's rating in the military. She would have periodic pay increases at intervals, up to what it takes to keep her on the job if she's worth it. She should have the opportunity to become a senior bedside nurse—a promotion comparable to the chief warrant or petty officer in the military. But if she wanted to become a professional, she would have to return to a civilian university and obtain the necessary education.

The area of nursing below the professional level should be a career in itself. Teaching, supervising, nursing administration require more than a 3-year diploma, not only for the sake of patients, but for the sake of the poor devils who have to work on nursing services and in nursing departments under the guidance of the so-called professional nurses.

The 2-year level is also an opportunity for the practical nurses to prove they can go on; whether they should be licensed by examination or by sweating out the course for 2 years would have to be settled by State boards of nurse examiners. The State board requirements for licensing should make these people realize that they not only have legal responsibilities, but also they have legal limitations on their activities. Licensure should help the individual remember that the practice of medicine is a full-fledged doctor's responsibility requiring 5 to 8 years or more of education—whether the doctor is around all the time or not.

The 2-year school of nursing would do several other things: It would answer the smaller hospital's need for cheap labor and at the same time meet the needs of many girls who cannot afford the more expensive education that goes with professional nursing. Many girls cannot meet the educational requirements, let alone the financial. This level of training would make possible the expansion of the nursing service of the Nation without danger to patients.

The nursing aspects of medical care and treatment, the ethics that surround doctors, patients and hospitals, would be stressed in this 2-year course, along with human relations. Cooperation with professional and practical nurses, not competition, would be emphasized. As a result, workers would not be subjected to the tactics of untrained nurse managers who neither know how, nor want, to train and supervise at the bedside.

Nursing is having a feeling for people—a human feeling that makes it possible for you to serve them and their often disagreeable sickroom needs around the clock, with compassion, sympathy and understanding. Teaching nursing, supervising nursing, inculcating the ethics of nursing into people and inspiring them to give that nursing care in a compassionate, sympathetic and understanding manner is an entirely different job. But you have to understand the first before you can accomplish the second.

Hospital administrators make their greatest mistake, waste the most money, in believing that quantities of people can substitute for quality in nursing.

Consider one of the prototype studies published in The Modern Hospital last year, for example. The 600 bed hospital was reported as having an average daily census of 482 patients with 51 newborn.

To give nursing care to patients and to staff operating rooms, delivery rooms, outpatient clinics, central supply departments, teaching schedules, head nursing jobs and supervision around the clock, the 600 bed hospital employed 754 people, only 30 percent of whom were graduate, registered nurses. Less than half these nurses were

general duty nurses, and even including the part-time nurses employed, they accounted for only 20 percent of the number of people employed as nursing personnel.

Of the 528 less than professional personnel, 260 were student nurses, 39 were practical nurses and 229 were other employees, identified as nurses' aides, orderlies, maids and attendants. Under these circumstances, the graduate staff, whether it is acknowledged or not, must be, of necessity, in leadership positions, even as general duty nurses. Yet surveys reveal that only about 30 percent have the required interest, personality, education and other qualifications for such responsibilities.

Thirty percent of a staff that includes all levels of workers should all be leaders—not just 30 percent of 30 percent.

Suppose the nurses who lack leadership qualities and ambitions could be designated as trained bedside nurses, and the best practical nurses, nurses' aides, and attendants could be given enough training to bring them to a 2-year level of education, and licensed as bedside nurses. This group, along with new recruits to 2-year schools, will soon make up a staff of bedside nurses who know and understand the nursing aspects of medical technics, who want to practice them and can be legally responsible for doing them right. Let this group, under the administrative guidance of the professional head nurses and supervisors, give nursing care to patients. But fire the first head nurse or supervisor who fails in her role as supervisor or teacher when the staff asks for help.

A third of the remaining force should be trained practical nurses so that the skills and abilities of the bedside nurses will not be wasted with less than the acutely ill. If your professional staff are true leaders, you will find you can probably cut the size of the paid staff to about one-half what it is today—but you will be required to back your director of nurses on matters that affect nursing service, and include your total professional staff in your communications system. Mental telepathy is not taught in enough schools to make it effective, in either direction, in the hospital.

Nearly one-half of your nursing staff is now trained to a safe level; one-third is in an understudy position, and the other one-sixth has an opportunity to progress if they want to make the effort. Any person at any level can stay at that level, if she prefers. With this kind of an organizational structure in civilian institutions, nursing service could be expanded to meet a national emergency, but instead of drafting only graduate, registered nurses and untrained enlisted men and women, a portion of each trained group could be ready for the expansion, and a like portion could remain at home. The main idea is to have an organized nursing service and get your money's worth from the people you hire at the level you hire them, both as a civilian hospital administrator and a taxpayer. If you are going to have to pay commissioned officer salaries to nursing personnel, in or out of the military, for goodness sake require the qualifications and performance that go with them. But don't leave them stranded at the top of the ladder with nothing between them and the bottom rung.

The time should be long past when we, as patients or taxpayers, can afford to pay lush salaries to haloed Florence Nightingales because they once graduated from schools of nursing and practiced nobly at the bedside of patients. Top-level performance in nursing leadership should be the criterion of high-sounding titles and big salaries, in any area of our national economy—Government or civilian. Especially when somebody else is carrying the lamp.

Propaganda for Summit Meeting

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. CURTIS of Massachusetts. Mr. Speaker, in extension of my remarks, I include my current newsletter which discusses the present propaganda in favor of a summit meeting, as follows:

President Eisenhower and Secretary Dulles have made clear America's willingness to engage in meaningful negotiations with the Soviets, but distrust of steps whose principal value might be for propaganda purposes.

"It is absolutely futile," said the President at his press conference last week, "to attempt to hold a summit meeting unless the agenda and the subjects included on it are so well prepared as to give a general belief that real progress toward easing of tensions can be accomplished."

The Soviets are now engaged in a tremendous campaign to show that they are the ones most anxious for peace. Perhaps America's reaction to the sputniks and intensified defense efforts were more than the Russians had bargained for, and they are now pouring oil on the troubled waters. Their campaign is featured by demands for a summit meeting.

The New York Times suggests a reason: "The Soviet aim appears to be to relax tensions in Europe in the hope of undermining the West's willingness to bear the burdens of defense, and of gaining acceptance of the status quo—that is, a divided Germany and Russian domination of the eastern half of the continent."

People must guard against the assumption that those who speak the loudest in favor of a summit meeting are therefore the ones who are most devoted to the cause of peace. Russian propaganda has made effective use of that assumption.

A summit meeting is simply one between the heads of state. For us that would mean President Eisenhower's personal participation. For England it would mean attendance by the Prime Minister rather than the Foreign Secretary. It is no cure-all.

After all, international agreements have not usually been made at meetings of heads of state. Neither President Wilson's participation in the Paris peace conference following World War I, nor President Franklin D. Roosevelt's talks with Marshal Stalin, evoke particularly happy memories.

The last summit meeting at Geneva in July 1955 was disillusioning. Then as now people expected great results. There was enthusiasm for the spirit of Geneva. President Eisenhower met with Marshal Bulganin and Mr. Khrushchev, Prime Minister Anthony Eden of the United Kingdom, and president of the council Edgar Faure of France. The meeting culminated in a directive to the foreign ministers which stated:

"The heads of government, recognizing their common responsibility for the settlement of the German question and the reunification of Germany, have agreed that the settlement of the German question and the reunification of Germany by means of free elections shall be carried out in conformity with the national interests of the German people and the interests of European security."

But when the foreign ministers met at Geneva a few months later, the Soviets refused to negotiate for the reunification of Germany.

When asked whether this subject should be brought up again at the proposed new meeting, Secretary Dulles replied that he saw doubtful wisdom in a second summit meeting which would in effect bury the results of the first one rather than build on it.

President Eisenhower said at his news conference last week: "We will never close the door * * * if there is any possible avenue, no matter how crooked, no matter how narrow, if * * * it will take us toward some easing of tensions in the world, one step toward peace, I am perfectly ready to start."

The attitude of the administration is in the highest traditions of America. We proceed with wisdom and caution, but will make every honorable effort. Whosoever shall compel thee to go a mile, go with him twain.

The Meaning of Mutual Security

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. CARNAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following editorial from the February 25, 1958, issue of the Arkansas Gazette published in Little Rock:

THE MEANING OF MUTUAL SECURITY

Little Rock has just been treated to a visit from a bipartisan team of Congressmen which is touring the country in support of President Eisenhower's embattled mutual-security program.

The traveling team, made up of Representative A. S. J. CARNAHAN, Democrat, of Missouri, and CHESTER E. MERROW, Republican, of New Hampshire, could be likened to one of those so-called truth squads, a development of recent political campaigns, whose job it is to clear up misinformation spread by the other side. Unlike the truth squads, as they have worked out in practice, however, the team of CARNAHAN and MERROW is not leaving a store of new misinformation in its wake.

It simply tries to give factual answers to questions about the mutual-security program, and in so doing to dispel some of the prevailing misconceptions which seek to dismiss mutual security as a giveaway program, pouring money down a rathole, and so on through a variety of verbal tricks.

Mutual security is simply that a program of overseas assistance undertaken for the benefit of both the United States and the recipient nation. Even foreign aid, although handy for headline purposes, is not quite an adequate definition.

In their speaking appearance at Little Rock, Representatives CARNAHAN and MERROW used a standard pie-cut chart to demonstrate that mutual assistance takes up only 5 percent of the administration's proposed new spending budget for fiscal 1959. If they had broken those spending figures down still further, to show the actual amount contemplated for economic assistance overseas, foreign aid's slice of the pie would have been shown to be an infinitesimal wedge indeed.

Yet when most people think of foreign aid they think of economic assistance. A bottle of milk for every Hottentot, was the contemptuous term used in the very earliest days of the mutual assistance program. The

facts, of course, are that by far the major share of every mutual security program of recent years has gone into military hardware for our armed allies.

There are imbalances in the mutual security program as presently constituted and as projected in Mr. Eisenhower's new budget. There have been examples of waste and errors in administration. By and large, however, the program has lived up to the billing Mr. Eisenhower gave it in his special message to Congress last week: It amounts to a first line of defense for America in vital areas overseas, which if lost to the Communist colossus, would deny us vital and irreplaceable markets and sources of raw materials. It has, moreover, been cheap at the price.

The mutual assistence program—with its adjunct, the reciprocal trade program—is one area where the President's early lack of vigor and resolution may cost him and the country dearly. However, it still is not too late if enough good Americans of both parties will follow the example of Representatives CARNAHAN and MERROW and weigh our overseas trade and aid programs for what they really are and ought to be.

Governments Are the Craziest People

EXTENSION OF REMARKS

OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 11, 1958

Mr. SCUDDER, Mr. Speaker, under leave to extend my remarks, I desire to insert an editorial from the Press Democrat of Santa Rosa, Calif., of March 4, entitled "Governments Are the Craziest People."

It might do us some good to know what people think of us with regard to some types of legislation which is enacted by Congress, and a thorough investigation should be made in line with this criticism. I believe that many times projects that are extremely necessary and would not add to our surplus could well take priority over certain projects that would add to the production of surplus crops that adversely affect present production.

The editorial follows:

GOVERNMENTS ARE THE CRAZIEST PEOPLE

If an individual was growing so much wheat that just the bill for storing it was a hardship, but kept hiring still more people to raise still more wheat for him, folks would be inclined to question his sanity.

Or if he decided he had too much land under cultivation and retired part of it, simultaneously building a lot of dams and canals to put other new land under cultivation, his neighbors would probably holler for a lunacy hearing in his behalf.

If he decided he should save more money for his old age, but sawed every dollar of his savings in half and threw one-half away, folks would sure enough conclude he was slightly less than normal.

Yet those are only three examples of what goes on perpetually in our Federal Government. It has accumulated basic crops beyond all reason, and many lawmakers want to restore the high parities that led to the surplus. Reclamation projects are opening new farmlands while the Soil Bank retires existing lands. Social security taxes build up a reserve for old age income while national fiscal policies constantly encourage whittling down the buying power of what a dollar will purchase.

What we can't figure out is why something that would be sheer insanity if done by an individual becomes sound policy if done by a Government supposed to represent millions of people.

The way it seems to us, if a thing would be insane if done by one person, it's 150 million times as nutty if done in the name of 150 million people.

Speech of Senator Allen J. Ellender

EXTENSION OF REMARKS

OF

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 11, 1958

Mr. ROGERS of Florida. Mr. Speaker, on March 8, we were fortunate in having Senator ALLEN J. ELLENDER speak in Hollywood, Fla., at a Broward County Democratic dinner. Senator ELLENDER, as an outstanding Senator from the great State of Louisiana, and one who is recognized nationwide for his public service to the Nation, was warmly received.

Senator ELLENDER has rendered a fine service to the Nation as chairman of the Senate Agriculture Committee and as a member of the important Appropriations Committee as well. He has devoted a great deal of his time and effort in keeping abreast of world affairs and has traveled extensively throughout the world, including Russia. This travel and study has given him an exceptional background and knowledge of the administration of the foreign aid program as carried on by our Government. His observations are included in this forceful speech:

Ladies and gentlemen, I was flattered and pleased when your fine, able Congressman, PAUL ROGERS, invited me to come down here to talk to you on problems of mutual interest. I have always had a soft spot in my heart for Florida. My late wife, my only son and I often visited your many interesting sights. It has been my privilege to work closely with your two Senators, Senators HOLLAND and SMATHERS. I also knew and admired PAUL ROGERS' father, who represented this district so ably.

Florida is extremely fortunate in having such a splendid delegation representing it in Congress. SPESSARD HOLLAND, with whom I serve on both the Senate Committee on Agriculture and Forestry and the Senate Committee on Appropriations, is one of the finest, ablest, most courageous, and hardest working Senators I have ever personally known—and I have served in the Senate for nearly a quarter century. He is devoted to the cause of Florida, in fact to that of our great country. GEORGE SMATHERS has consistently represented Florida well and ably. In his capacity as chairman of the Democratic Senatorial Campaign Committee, we depend upon him to carry us to victory—and he has done a fine job. PAUL ROGERS, although a relative newcomer to the House of Representatives, has a fine future ahead of him.

Now, it occurs to me that some of you may wonder why I choose to compliment and pay tribute to your legislators when, on occasion, we do not see eye to eye on national problems. I think it is important that the reason for this is understood and appreciated, for in it is found the basic principles upon which the Democratic Party rests.

The reason is simple.

People are different, their views and opinions vary, from State to State, even from county to county. Yet, within the framework of the Democratic Party, there is room for diversity of opinion, for differences in viewpoint. Our party is no monolithic structure, governed in its views by one man, or one clique. On the contrary, under the Democratic Party's banner gather men and women of varied opinions. I believe this is a good thing. It makes our party truly representative of the people, for we do not purge or outlaw those whose views may differ from the views of the majority.

Let me give just one example of what I mean.

There is the matter of foreign aid.

I have been a Democrat since I first sought and won public office, over 40 years ago. Generally speaking, the leaders of the Democratic Party favor a continuation of the foreign aid program, as, obviously, do the ruling circles of the Republican Party. Yet, I—for one—have been in the vanguard of those opposing the present program. By analogy, the recent announcements made by President Eisenhower, who said he would not support Republican candidates who opposed foreign aid, a move should be underway to read me out of the party.

Such has not been the case. On the contrary, some of those most vociferously in favor of the present aid program have gone out of their way to see that I have been provided a forum from which to make my views known. Their position has been—and I believe rightfully so—that the American people are entitled to the benefit of all the facts, both pro and con, and from these facts, our people can be trusted to reach the right decision.

That is why I have no qualms about telling this audience tonight, as we pay tribute to the patron saints of our party, Thomas Jefferson and Andrew Jackson, that I am going to continue to fight against the program as now administered with every ounce of strength within me.

In this regard, I do not think my views are radical, or ill founded. On the contrary, I am convinced that if we strip the ballyhoo and propaganda from around the foreign aid program, our people will agree that is has been too long continued—that it should, and must, yield to a much different concept if we are to emerge victorious from the global cold war in which we are now engaged.

Ladies and gentlemen, our country has spent over $50 billion—nearly one-sixth of our present astronomical national debt—in an effort to win the cold war by the generous application of what is apparently the only nostrum our Republican friends recognize—dollar balm.

Evidently the administration is of the opinion that since the ills of big business can be alleviated by this remedy, the same medicine should be spoon fed in liberal doses to each and every country of the world.

The abysmal record compiled by the foreign-aid program to date shows the fallacy of this theorem. But evidently the administration just refuses to face facts.

Only a couple of weeks ago, Big Chief Eisenhower and his tribal braves organized a mammoth circus in Washington to whoop it up for foreign aid. Almost everybody of any note was there, from professional politicians to professional baseball players.

I do not believe for 1 minute that the application of mass advertising techniques will make a $4 billion foreign-aid program palatable to the American people. The program may be a welcome salve to some of our dollar-hungry and greedy allies, but it is castor oil to the American taxpayer.

It would be a lot less grueling upon me, as an individual and as a Senator, if I just sat back and parroted the unctuous and pious

platitudes which oozed out of the foreign-aid conclave in Washington.

But I cannot. I have seen the program as it has been operated in the field. I know, from firsthand experience, that waste is plentiful and ill-conceived projects rampant—that we are spending vast sums of money and accomplishing little, if any, real good. In many cases we are becoming the laughingstock of the world; in others, we are downright despised.

For one thing, quite a few of the people we send overseas to administer and operate our country programs are no credit to our Government. There seems to be something about the atmosphere of foreign lands which goes to the heads of some of them. They get the idea that they are better than the folks they are sent to help. They develop an affinity for big cars, large houses, hordes of servants. Too many of them look down their noses at foreign peoples, particularly in Asia and the Middle East, because their customs are different from ours. They forget about the masses and focus their attention on the big shots, the wealthy people, and too often our programs do the same thing.

For example, I found that in Cambodia we are paying 1,000 American dollars per month to a rich Cambodian landlord for rent of his residence, in which residence we maintain a library.

We are pouring money into such countries as Saudi Arabia and Iran whose oil revenues are staggering. This money is not helping the people who most need help—the masses—but serves primarily to make the rich even richer. You will never convince me that Saudi Arabia and some of the other oil empires of the Middle East need United States dollars when King Saud can come to the United States, leaving a trail of jewels and solid gold wristwatches behind him.

You know, ladies and gentlemen, programs such as foreign aid all too frequently attract more dreamers than hardheaded realists. I am convinced that insofar as the practical use of American funds are concerned, our foreign-aid planners are much more inclined toward testing out harebrained schemes than in rendering help to backward peoples.

In Korea, there are many examples of this.

Now, if you only read the newspapers and the broad justifications submitted to Congress in support of foreign aid, you would be led to believe that our programs in that country are absolutely vital to maintain even a spark of life among the masses of people.

Let me tell you now that the practice does not jibe with the preaching.

Koreans have been rice eaters for many, many centuries. Their traditional diet is rice—they like rice, prefer rice, and most of them have never seen a loaf of bread. But some of our starry-eyed planners concocted the bright idea of changing the diet of the Korean people. As a result, we have built four flour mills in Korea.

Korea does not produce any wheat, so we have to give them the wheat to grind into flour in the flour mills we have built. The justification given was that Koreans should learn to consume wheat so that they could export rice.

This is just one example of such waste. We have also built in Korea a plastics factory, to make plastic rice bowls for the Koreans to hold the rice which our planners are teaching them not to eat. We have bought hundreds of streetcars and buses for Seoul and other Korean cities.

In Formosa, we have undertaken a mammoth GI bill of rights for retired soldiers of Chiang Kai-shek's armies. We are building rest homes for them, and have even purchased road building and similar equipment to be used by these retired soldiers in the construction of roads and buildings, a la WPA.

Afghanistan is one of the most backward countries in the world. Yet, we are undertaking to provide Afghanistan with a complete system of airways—from airports and runways to aircraft and pilots.

Afghanistan is in greater need of things other than airplanes; yet, we are insisting that they take them. But, they cannot turn down the offer of something more or less free, especially when we pay for the services of a prominent airline company to teach them how to manage airports and train pilots.

In addition, it burns me up to be told that we do not have enough money to modernize our own airports when we evidently do have enough money to build new ones for Afghanistan. Florida, like Louisiana, has a heavy interest in tourism. Each year, hundreds of thousands of our people come to this fine State to enjoy your warm breezes, to bask in your sunshine, and, of course, to spend their money. Many more could and would come if transportation methods were improved—if bigger and better airports were built, if more fine highways such as your Sunshine Freeway were constructed. These things could be done if we were not so busy doing similar things in areas which do not need them that we must skimp on important work here at home.

All of us know and understand that we cannot buy admiration or friendship with dollars. All of us should have learned by now that you can go just so far helping someone without ultimately making him so dependent upon you that he refuses to help himself.

Such has happened in Western Europe. We spent money under the Marshal plan in order to bring the Western European countries back to economic health—to strengthen them to a point where they would be of assistance to the free world. We all understood that the United States could not and cannot bear the whole burden of free world defense for an indefinite period of time without inviting economic collapse and national bankruptcy.

So we helped Europe to recover.

Today, Europe is back on her feet; as a matter of fact, she is better off than she ever has been in the past.

But are the Europeans helping us to carry the load in the Middle East, in southeast Asia, in Korea, in Formosa?

They are not. On the contrary, they are cutting their taxes, reducing their armies, and calling to Uncle Sam to make up the difference—even at the cost of raising our own expenditures and our own debt past the danger point.

We have heard a lot about the North Atlantic Treaty Alliance lately. We are being fed some slick advertising to the effect that NATO is strong and vigorous.

Ladies and gentlemen, NATO is sick; the vaunted shield of Western Europe has about the same relative strength as a wet paper bag. Almost the only ground forces available for immediate action in defense of Europe are our own 5⅓ divisions stationed there. The British have pulled many of their troops back home. The French troops are in North Africa, making war on nationalist-minded natives, using American arms—arms provided to defend Europe, not to perpetuate colonialism, and to bully smaller countries. Just the other day, Secretary of Defense McElroy undertook to justify further large-scale military aid to Europe on the basis that for every dollar we put up, Europe puts up 5. Well, that is true up to a point, but that $5 counted as the European contribution includes not only European contributions to NATO, but each country's domestic defense budget as well. If we add in our own domestic defense expenditures, as well as foreign aid, our contribution to free world defense is 3 United States dollars to very 1 of Europe's—a contribution which makes Europe's look mighty small—as it is.

We would also be led to believe that all we do is provide a few weapons to Europe, that the Europeans do the rest for themselves. That is not so. Here are the facts.

Under military aid, we defray the cost of 50 to 60 percent of Europe's military research and development work, in addition to 100 percent of our own. This is called mutual special weapons development.

Then, when weapons are developed, we help build factories in order to manufacture these weapons. This is called facilities assistance.

When the factories we have helped finance are built, then Uncle Sam places contracts with them under the offshore procurement program for the purchase of the weapons we have helped develop. These weapons paid for with American dollars, are then donated to European armies. In other words, we help develop the weapons, we help build factories to manufacture the weapons, then we actually buy and donate many of the weapons so developed and produced.

Over and above this, we donate considerable amounts of our own materials of war to the European armies.

This is not a mutual security program. Mutual means cooperative. As the late Senator Smith from South Carolina used to say, "Europe does all the co-ing and we do all the operating."

Just lately, there is a growing awareness among Americans that we are on the wrong track in our effort to win the cold war—that we are betting our money on the wrong horse and losing every time.

I think it is high time we faced up to the fact that our real enemy in the cold war is Russia. Instead of squandering our substance in such bottomless pits as are found in Western Europe, instead of undertaking to Americanize every country in the world, instead of wooing India, and other neutrals, by providing them with cash and by shipping them wares and goods by the boatload, I think we should face up to the fact that if we can create dissension within the Soviet Union, we will have won a great victory.

We have spent over $50 billion in an effort to strengthen the free world, and to weaken the Russian system. Instead of building free world strength, we have succeeded in creating only a desire upon the part of our so-called friends to lean a little bit more on Uncle Sam. Instead of weakening, the Soviet Union is growing stronger.

She is developing her internal resources; she is giving her people a better way of life than they have ever enjoyed, although it is still far below our own standard. We cannot find solace in the fact that our steel production is higher than Russia's when that of the Soviet Union is increasing at a much more rapid rate than our own, nay, when we are now using about 50 percent of our capacity. We cannot burrow our heads in the sand and feel secure because we produce more refrigerators than the Soviet Union when she has obviously progressed much further than we in her rocket research and some other fields of technology.

During the past 3 years, I traveled extensively in Russia. I found some astounding things—things which I am forced to conclude the administration deliberately kept from our people. For instance, just about 2 years ago, Mr. Dulles told Congress that Russia was on the verge of internal economic chaos—of collapse. He was dead wrong, and he must have known he was. The Russians are nowhere near economic collapse—their economy is growing and expanding. Their industrial base has become broad enough to support not only a tremendous military program, but also a fairly large consumer goods production as well.

Siberia, which most of us thought at one time was an icebox, a barren waste, a prison camp, is becoming the granery of Russia; factories are sprouting there, powered by electricity generated by high hydroelectric dams, and the vast coalfields of the area.

But, in addition to these developments which should alarm us, there are others within the Soviet Union which offer us an unprecedented opportunity. Education is the first and most important.

The Russians are going all out to educate their people. As they do so, they are creating curiosity among their people about other countries—about the way other people live. Where this curiosity has been coupled with a peek at the outside world, it has frequently resulted in the Russian leaders having to modify their system in order to accommodate the demands of their people.

In brief, there is an evolution going on inside Russia—an evolution which, if taken advantage of, will offer us an opportunity to mold the future course of Russian society.

We are seeing increasing signs of a willingness of the Red leaders to bow to the demands of their people, when these demands are too vigorous to be denied.

A most recent example involves the decision of Khrushchev, and others to abolish the so-called machinery tool stations.

In Russia, one finds two kinds of farms—state farms and collectives. State farms are owned and operated by the state; the workers are paid fixed salaries. The collectives are essentially cooperatives, composed of large areas of land owned by the government but worked by as many as 500 Russian families, on a cooperative basis.

In the past, collective farms have not been permitted to own machinery, such as tractors, combines, and so forth. Instead, collectives have had to rely on the government-owned machinery tool stations to plant, cultivate, and harvest their crops. This has frequently resulted in hardships. The MTS bosses often gave preferential treatment to some collectives. In addition, because machinery was in short supply, crops were lost.

When I was in Russia in 1955, I found much dissatisfaction among the collective farms with the machinery tool station setup. Evidently, this dissatisfaction grew to such proportions that the Kremlin decided to reverse a basic Marxist theory and permit collective farms to own their own equipment, thus giving Russian farmers a bit more independence from government control.

It is my considered judgment that if we encouraged more of the Russian people to visit the United States, and if we sent more Americans from every walk of life to Russia, we could make the Russians so dissatisfied with their present way of life and so envious of our own, that they would gradually force their leaders to change their ways.

I found, for one thing, that the Russians are convinced that communism is superior to capitalism because they have no conception of the advantages capitalism has to offer—of the abundance of spiritual and material things which we in free countries now enjoy.

All the Russian people know is that communism has brought them a better way of life than that enjoyed under the czars, which, incidentally, it obviously has, although it is far from as good as our own.

Freedom, such as we enjoy within the United States, is a force which communism can never overcome if only it is possible to plant some idea of the benefits of freedom in the minds of the Russian people. Increased exchanges of persons from every walk of life would help us plant and nurture this seed—a seed which will grow to a point where either the Russian leaders will accommodate their system to it, or face their own downfall from forces within Russia.

Let us use the traditions of freedom, of individual choice, of individual dignity we possess here at home to combat the vicious evils of communism; let us set up America as a showplace of freedom's wares, permitting all who desire to look, an opportunity to do so. In such a manner, we can—I repeat—create dissension within the Soviet Union.

Many years ago, when our Nation was in its infancy, the voices of our leaders announced a principle which I fear we have abandoned, namely, millions for defense, but not one cent for tribute. The American people are sick and tired of offering their wealth as tribute to foreign lands—as a kind of bribe, by which we hope to keep our so-called allies on our side. We should not need to bribe nations to accept freedom, and I, for one, think it is time to call a halt.

With faith in the future, with an abiding trust in the justice of our couse—we can and shall find means of fostering freedom, of destroying communism, without sacrificing our country's heritage on the altar of continued giveaways.

Certainly, such an approach would be infinitely more beneficial to our country than a continued reliance on programs such as foreign aid, which have not only failed, but which have brought us to the brink of bankruptcy—a development which the Russians like immensely. After all, internal economic collapse of our country would represent a great victory for the Communist system, and would, I believe, ultimately doom the free world to extinction.

In addition, we must remain militarly strong. We must offer no temptation to any would-be world conquerers to achieve dominance over us by military means.

We need an austere but progressive military program, one based upon sound fiscal concepts. We need more emphasis upon missile research, development, and production, and complete abolition of emphasis upon interservice rivalry and the creation of personal "empires" within our Military Establishment.

We urgently require expanded research on ways and means of defending our cities against nuclear attack, particularly attack by submarine-based launching devices designed to obliterate our coastal metropolitan areas.

In brief, we need the kind of Military Establishment which will concentrate on the meat and potatoes items of defense, and forgo the champagne and caviar—such wasteful things as internal bickering, fancy personal cars for high brass, high-priced personal aircraft—including helicopters—and the maintenance of swank residences, hunting lodges, and night clubs on military bases, or elsewhere.

It is a sad commentary upon political factors operating in Washington and elsewhere that with a military man in the White House, our Defense Establishment has not kept pace with that of the Soviet Union, the armed strength of the free world has dropped alarmingly, and the missile-testing site up the coast from here a ways has seen more fizzles than successful firings.

For quite some time, I have urged a new look at our foreign policy, but with this should be coupled a new look at things at home, as well. While John Foster Dulles drags us to the brink of war, his cohorts down the street are leading us to—and perhaps over—the brink of depression.

Tonight, and in the future, let us pledge ourselves that there will be no more such brinks, either at home or abroad. Instead, let us work for a Nation which is strong both militarily, and economically—which is respected overseas, not regarded as a laughingstock.

Let us put things in their proper perspective—forego the wasteful programs of the past for the kind which will spell success in the future. We have had a dose of so-called modern Republicanism in Washington, and we have found that it is 90 percent advertising and 9 percent talk.

One percent results is a sorry batting average in anybody's league.

Our Nation needs action, not slogans. We need a change for the better, not merely more promises that if we wait around long enough, keeping our chins high and our mouths shut, we will pull through.

American deserves better than merely the prospect of pulling through. America needs and deserves a forward look in something besides Chrysler cars.

Florida obviously believes that—as the caliber of your congressional delegation demonstrates.

I am hopeful that your viewpoint in this regard will not change, and that when the 1958 elections have come and gone, the people of Florida will not only have sent to the Congress a delegation 100 percent devoted to the principles of Thomas Jefferson and Andrew Jackson, but will have done so in such a resounding manner as to put others on notice to "Go, and do likewise."

Sudeten Germans Stress Need for Peaceful Policy of Liberation for Peoples of Czechoslovakia

---

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 11, 1958

Mr. BURDICK. Mr. Speaker, I believe that some words should be added to the manifestations of friendship and sympathies toward the peoples who had become victims of communism through the communization of Czechoslovakia 10 years ago. The Czechoslovak National Front President Dr. Benes signed the new Communist government on February 25, 1948, and the Parliament of the National Front approved it on March 10, 1948. In this way, the communization was legalized.

For those who study the CONGRESSIONAL RECORD as a source of wisdom, truth, and political information, I may add that Czechoslovakia was a state of many nationalities. She was founded as a new state in 1918, and contained the following nations: 6.8 million Czechs, 3.2 million Sudeten Germans, 2 million Slovaks, 762,000 Hungarians, 477,000 Carpatho-Ukrainians, and 336,000 of other nationalities.

If we express our sympathies toward those who became victims of Communist aggression we should express our sympathies towards all these nationalities.

An outstanding committee of this House, the House Committee on Communist Aggression, under Chairman Charles J. Kersten, investigated the reasons for the communization of Czechoslovakia and published its report in December 1954. I believe that the attention of every student of the communization tactics and of the communization of Czechoslovakia should be called to this excellent report for which the praise belongs to the distinguished members of this committee. Any remembrance of the 10th anniversary of the communiza-

tion of Czechoslovakia without mentioning the findings of the House Committee on Communist Aggression certainly gives an incomplete picture.

I should like also to add that after the Czechoslovak Republic was restored in 1945 by Benes who returned to Prague with the Communist-led Government of the national front, the Sudeten Germans and a great part of the Hungarians were appropriated and expelled. The expulsion of such a big segment of population which owned a great part of the entire industry and agriculture on the territory of Czechoslovakia and which was absolutely anti-Communist, was perhaps the most important reason for the success of the communization of Czechoslovakia from within 3 years later, in 1948.

Also the part played by the Communist Secretary General Rudolf Slansky should be stressed in the same way as the part played by the state security police. Slansky-Salzman was the prime mover in the communization of Czechoslovakia, more powerful than the Communist Prime Minister Klement Gottwald.

Some politicians of the Communist-led national front were able to come to the West after 1948. I believe we should encourage and ask them to reject any type of collaboration with the Communists and to reject any past unlawful deeds which they had committed in the 3 years of the national front, 1945–48. We should encourage them to seek friendship and cooperation among all nations of former Czechoslovakia, and to set just aims for the future above all the restoration of political and economic freedom and of ethnic conditions as they were before the Communist and Nazi interventions, and second, the application of a full and absolute right for self-determination for each nation of former Czechoslovakia.

Instead of giving praise to the National Front men here in the United States, telling them that Czechoslovakia—founded in 1918—was one of the oldest European states or that the first Czechoslovakian university was founded in 1348 or even calling the National Front President Benes a great modern citizen or calling the National Front a government of independent political parties, which all is misleading, not only for the students of history but also for those who would like to find means how to protect the rest of the free world against Communist intrigues and tactics, we rather should watch closely the situation as it really is and also see that many politicians of the National Front of Czechoslovakia who did not understand sly Communist tactics in 1945–48 obviously also today, in America, do not understand the sly Communist tactics, and while working in Radio Free Europe or the Assembly of Captive European Nations, never reveal and attack the system of the Communist State Security which had outwitted them already once in their homes. We probably should, instead of giving them undeserved praise, ask the National Front politicians to start finally to understand the true Communist system and to fight it, not to protect it.

Finally I should like to stress and to recommend to the attention of my colleagues that not all the refugees of former Czechoslovakia are acting in the way the former National Front politicians are acting. The really anti-Communist Czech, Slovak, Sudeten German and Hungarian refugees and expellees understand the system of the Communist State Security in the Communist countries and they also do not believe in national communism and Titoism. They believe that Gomulkaism and Titoism were invented by the Communists themselves in order to get economic aid from the West and in order to soften and paralyze all real anti-Communist and intelligent policies on the part of the free world.

Real anti-Communists from Czechoslovakia reject the illusions about Titoism, spread by the Communists, and request rather a realistic policy of liberation which could abolish communism without war and which is expressly wished by the enslaved nations. I call this policy, as it is being recommended by the secretary general of the Sudeten German Council, Dr. Walter Becher, and the Czech exile, Mr. George Brada, and by other anti-Communist exile leaders, to the attention of my colleagues:

The active and concrete policy of liberation, as expressedly wished by the enslaved nations, meaning the abolishment of communism and war contains the following points:

1. Restoration of the free world's authority and foundation of Western policies on the principles of both the real American traditions and the best traditions of Europe, on the principles of sound reason, morale, social justice, enlightened nationalism, and Christianity.

2. Founding of a possible military strategy planning on a technical and scientific superiority, on guided missiles, rocket weapons, air force, etc.

Restoration and strengthening of the West's scientific and technical superiority so that communism cannot start any war and, therefore, may be abolished without war.

3. Removal of the artificial fear of Russia, created by means of false propaganda. Showing the real basic weaknesses of the Communist slave system, of its collectivist economy, of the system of conspiracy and rule by a minority. Revealing of the fact that the Soviet successes in the past were mere swindles and thefts.

4. Fight against as well revelation of the Communist state security system (the "invisible government" behind the scene) in the East, revelation of the Communist system of agent provocateurs.

5. Fight against communism and the secret Communist conspiracy also in the West by all means of press, radio, and other facilities of enlightenment. Full support and intense publicity for the splendid work of the committees of the United States Congress as well as practical application of the conclusions of their findings. Full and definitive exclusion of all security risks, crypto Communists, and of spies. Full eradication of the Communist conspiracy in the West, which will be followed by the absolute eradication of communism in the East.

6. Revelation of those who form the backbone of world communism. Concentration of all the attacks against this backbone of international communism and promise of amnesty to all those seduced, if they will repent, in order to separate them from the heartless and incorrigible leaders of international communism.

7. Severing of the economic relations with Communist countries and stoppage of every military and economic aid for Communist or Communist-allied countries.

8. Severing of the diplomatic relations with Communist countries and expulsion of Communist representatives from international organizations, as the U. N., etc.

9. Concentration of all anti-Communist refugees and expellees in national organizations, units, and institutions according to their nationalities for various individual tasks, e. g., the strengthening of anti-Communist spirit and work, the creation of magnets causing defection of Eastern nationals and soldiers, and the acknowledgment of exile governments formed by anti-Communist refugees.

10. Declaration addressed to the peoples of the world stating that the enormous tax burdens as well as armaments and the atomic danger can be stopped provided that communism is destroyed. Promise of full economic aid to the enslaved peoples after their liberation has taken place.

11. Better radio broadcasts for the East, practically doing the very opposite of what Radio Free Europe is doing now, giving to the enslaved peoples real guidance, counsels and leadership.

12. Active and material support for anti-Communists in the East.

13. Outlawing war.

Using all deterrents to war, besides those mentioned above, so that communism can be finally destroyed and abolished without war from within, by its own slaves, who will remove the tiny minority ruthlessly governing them.

I assume that all my colleagues will agree with me that the best thing we and the exiles of the nations of former Czechoslovakia can do at the occasion of the 10th anniversary of the completion of the communization of Czechoslovakia is to urge the people of the free world to accept a new policy of liberation without war and to work actively for it.

Salute to Emma Bellamy, Registered Nurse, of the Wilkes-Barre General Hospital

---

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 11, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

SALUTE TO EMMA BELLAMY

Both the profession and the community shared the sentiments expressed by Wilkes-Barre General Hospital officials, alumnae and students last night in paying tribute to Miss Emma S. Bellamy, registered nurse, who has been identified with the institution for 40 years, the past 20 in the responsible role of director of nursing education and service.

It is unusual for a nurse to dedicate her life to her alma mater. With Miss Bellamy, this obviously has been a labor of love, providing her with an unparalleled opportunity for service in the finest tradition of a noble profession.

Miss Bellamy not only has had the personal satisfaction of catering to the needs of humanity, but of training others to follow in her footsteps. Thus, her example and skill have combined to obtain maximum results in the discharge of her duties.

Miss Bellamy has been honored by the commonwealth and by the profession on many occasions. Impressive as this recognition has been, it could not have meant more to her than the expression of good will and esteem last night from the hospital which she has served with such inspiring fidelity for four decades.

Louisiana Editor Urges Caution in Proposals for Military Changes

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. WILLIS. Mr. Speaker, there has come to my attention an editorial from the Daily Iberian of New Iberia, La., in which the editor and publisher, Mr. M. A. Wolcott, very thoughtfully and wisely calls for calm and careful consideration of some suggested changes in our Military Establishment, such as abolishment of the Joint Chiefs of Staff and the merger of the armed services. Whatever opinion his readers may hold on these matters, Mr. Wolcott stresses that the Nation should not be stampeded into quick and perhaps dangerous changes simply because of a sudden and surprise move by the Soviets in launching their sputnik. I think his advice to move cautiously and deliberately is most timely.

I am glad to have the opportunity of placing in the RECORD this editorial appearing in the issue of the Daily Iberian for February 26, 1958, and which follows:

JOINT CHIEFS OF STAFF—KEEP 'EM OR SACK 'EM

What's all this talk about abolishing the Joint Chiefs of Staff, merging armed services, interservice rivalry?

You hear arguments to dispense with the Joint Chiefs of Staff and substitute a super-Prussian type of command, eliminate so-called interservice rivalry by merging the Army, Navy, Marines, and Air Force in one standard uniform answerable to one supreme commander.

Here in New Iberia we have as much stake in those proposed changes as the rest of the country. They concern us and we ought to start doing our own thinking about the problem and offer some suggestions.

Probably the beginning of the argument came when Russia put the first satellite into space. The temper of feeling was to change things, reorganize the armed services, crack down on somebody.

Presently we are operating under a Joint Chiefs of Staff, principal military advisers to the President. It is composed of five men: Gen. Thomas D. White, Chief of Staff United States Air Force; Gen. Maxwell D. Taylor, Chief of Staff United States Army; Gen. Nathan F. Twining, USAF, Chairman of the Joint Chiefs of Staff; Adm. Arleigh A. Burke, Chief of Naval Operations; and Gen. Randolph McPate, Commandant United States Marine Corps.

Chairman of the Joint Chiefs of Staff (now General Twining) is selected by the President. As chairman he is not responsible to his own service, USAF, but serves as coordinator.

Serving directly under the Joint Chiefs is a staff of several hundred experienced, specially trained officers. These officers are drawn from the military service in proportionate numbers. Most have had combat experience and are familiar firsthand with the strategic employment and the combat capabilities of their respective services.

The Joint Chiefs of Staff, with their operational deputies, usually assemble twice a week. The deputies usually meet separately three additional times each week.

Before meetings, each Chief goes over the agenda items himself. He studies the problems and the solutions recommended by the joint teams. He then listens to the views of his operational deputy and other assistants from his own service who have also studied the agenda items. In this manner each problem is given careful, professional analysis and consideration before it reaches the Joint Chiefs of Staff conference room.

Some critics say that all the Joint Chiefs of Staff does is bicker, that nothing is ever done, or it's postponed until forgotten, or swept under the rug.

Interservice rivalry in itself is not bad. What usually is considered as interservice rivalry is simply an honest difference of opinion. Problems of necessity have to be weighed and debated and then arrive at a conclusion of what's best for the good of the country.

There are three basic areas of war—land, sea, and air. If we are ever to deal with them in proper balance, it is imperative that we have experienced and determined advocates for each.

Like counsel before a judge, their duty is to urge their case so strongly that when the arguments are done we can feel sure that no area for betterment has been overlooked.

One respected military man has pointed out that in his opinion downgrading the Joint Chiefs of Staff system and merging the military services into a single service would be following the logic that the best way to stop a nosebleed is to apply a tourniquet around the neck.

Well, it also ought to be mentioned that we won World War II under a Joint Chiefs of Staff operation and they probably had some honest differences of opinion during those perilous days.

It sums up to the fact that we shouldn't be stampeded into a rambunctious change merely because a Soviet-built satellite was fired into the air by surprise.

Let's reexamine the operations with the thought in mind that perhaps we've still got the best system, including Joint Chiefs of Staff and interservice rivalry.

A Congressman Changes His Mind

EXTENSION OF REMARKS
OF
HON. A. D. BAUMHART, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. BAUMHART. Mr. Speaker, on March 5, 1958, the Norwalk Reflector-Herald, of Norwalk, Ohio, an outstanding daily newspaper in my congressional district, published an editorial centered around certain remarks made by my esteemed colleague, the Honorable FRANK T. BOW from the 16th District of Ohio. This editorial pointed out how Mr. Bow's conceptions concerning a strong and active merchant marine have changed during the 8 years he has served in Congress.

As a member of the Merchant Marine and Fisheries Committee and representing a congressional district whose lake ports, with the completion of the St. Lawrence seaway project, will participate directly in foreign commerce, I fully concur with Mr. Bow's recent statements.

The United States, as the bastion of free world commerce, has the responsibility of maintaining supply lines with other democratic nations the world over. Even in this day of earth satellites and supersonic aircraft, it is still essential that the bulk of our international commerce be carried on with ships as the primary means of transportation. We must not be placed in a position wherein we need rely upon foreign hulls which for one reason or another might not be available. A strong United States merchant marine will free us from our dependency on other nations for this transportation service and strengthen our hand militarily, thereby helping us maintain the peace.

I ask unanimous consent that the editorial concerning the timely and considered remarks of our distinguished colleague, FRANK BOW, be printed in the Appendix of the RECORD.

A CONGRESSMAN CHANGES HIS MIND

Representative FRANK T. BOW, of Ohio, first came to Congress in 1950. At that time, he says, he was "not convinced that the dollars our Government spends to help support a merchant marine were necessary."

Then Mr. Bow became a member of the House Appropriations Committee, one of the most important committees in Congress. As a member, he goes on, he "made a careful study of the reasons that Congress, in 1936, passed legislation to help maintain a strong and active merchant marine, equipped to carry a substantial portion of our foreign commerce in time of peace and prepared to transport troops and equipment in a military emergency."

As a result of this study Mr. Bow came to a conclusion diametrically opposed to his view when he took office: "Government support of our merchant marine is one of the soundest investments we are making in the prosperity and security of the Nation."

Mr. Bow is certainly not alone in this. All manner of other people, in and out of Government, who have studied the merchant marine siutation, and objectively evalued its importance to our economic and military welfare, have reached the same conclusion. Some 300 merchant ships now operate under Government contracts, and the contracts are strict indeed. The steamship companies must provide regular service on 33 essential world trade routes. They must replace their ships with vessels built in United States shipyards and manned with American crews. For meeting these and other requirements, the lines receive payments from the Government to help equalize high United States shipbuilding and operating costs with low costs of foreign competitors. Thus the Nation pays a small price for not being at the mercy of a foreign merchant marine.

William T. Roy

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. ROGERS of Florida. Mr. Speaker, shortly after I was elected to the

House of Representatives, I had the pleasure of meeting William T. Roy, Assistant Parliamentarian of the House, and after that time, had the opportunity to see and talk with him on many occasions and to benefit from his many years of parliamentary experience. It is with great regret that I learned of his retirement for he will be truly missed in the House of Representatives. However, my district is fortunate in that Bill has bought a home in Delray Beach, Fla., and plans to make it his permanent home, so while we have lost a very able parliamentarian in the House, Florida has gained a fine citizen. As Congressman from the Sixth District, I would like to take this opportunity of publicly expressing my great satisfaction in knowing that Bill Roy will reside in Delray Beach, and of welcoming him and his family to our district.

Remove Limitation of Advancement of Postal Transportation Service Substitutes

EXTENSION OF REMARKS
OF
HON. VINCENT J. DELLAY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. DELLAY. Mr. Speaker, today I introduced a bill to amend the Postal Field Service Compensation Act of 1955 (39 U. S. C. 981) by striking out the limitation on the advancement of postal transportation service substitutes.

Mr. Speaker, section 401 (c), which my bill would amend, now provides, "Each substitute employee in the postal transportation service whose position is allocated to salary level PFS–5 as a distribution clerk in a railway or highway post office shall be advanced in the manner prescribed for other employees under subsection (a) of this section, but such substitute shall not be advanced beyond step 4 of salary level PFS–5."

Until a few months ago all postal transportation service substitutes were recruited at level 5 of the postal field service schedule. In November 1957, the Post Office Department changed its procedures and placed some postal transportation service substitutes in postal field service schedule level 4 and gave dual appointments in both levels to others.

My bill would remove the restriction in the last part of the section by removing the limitation that such substitutes could not advance beyond step 4 of level 5. In view of the fact that some postal transportation service substitutes are now going to the top step of level 4 it seems to me that those substitutes who are assigned in level 5 should also be enabled to advance to the top of their particular level.

It is understood that one of the reasons why the limitation originally was included in the act of 1955 is that the post office anticipated that there might be difficulties if a top step postal transportation service substitute in level 5 were to be given a regular assignment in level 4. The problems that were anticipated were centered upon the reduction in pay which would be involved. In view of the fact that conversion from substitute to regular is a voluntary action, there would in fact be no applied pay reduction. The conversion in such cases is at the request of the employee and, consequently, there should be no administrative difficulty.

In the letter which was sent by the Post Office Department to employees who were given appointments at level 4 it is declared that "this action is proposed because the law specifies that distribution clerk work in terminals and airport mail facilities is level 4 work." It must then also follow that the work in railway and highway post offices and in other level 5 assignments should properly be compensated at the appropriate step of level 5 within the spirit of the act of June 10, 1955.

Mr. Speaker, my bill would accomplish that purpose, and I hope that the legislation I have proposed will be speedily enacted by this Congress.

Home, Sweet Home

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. WAINWRIGHT. Mr. Speaker, every Member of Congress is proud, at least in public, of the community from which he comes. Both publicly and privately one of the most fortunate things that ever befell me was that a chance of nature made the village of East Hampton, N. Y., my home. Several years ago I invited a dozen of my colleagues for the weekend. To a man they agreed they had never seen a lovier place in all the world—in mid-July, cool, clean, green, with lovely homes, giant elms and oaks and an aura of peaceful happiness. A colloquial expression, which I deem a badge of honor for a resident of East Hampton, is "Bonacker." This has been defined as "someone who wants to get back to East Hampton when he's away." Our most famous "Bonacker" adds substance to this definition. John Howard Payne wrote the song Home Sweet Home while in Europe. His most famous home is located off the village green and the town pond in East Hampton.

How much is fact and how much is fiction in regard to Payne's early life and childhood in East Hampton is always a subject of lively debate. On the other hand, I invite you to visit the village of East Hampton and its shrine. Based on a firsthand inspection, you will be forced to conclude that John Howard Payne could only have poured out his soul for this heritage.

Tomorrow there will be an unveiling of one of the original copies of Home Sweet Home in the handwriting of John Howard Payne. A fine article by George Kennedy appeared in yesterday's Washington Evening Star. It is here set forth:

HOME, SWEET HOME
(By George Kennedy)

'Mid pleasures and palaces though we may roam,
Be it ever so humble, there's no place like home.

On the night of May 8, 1823, in Convent Garden, London, a singer took the center of the stage in an opera entitled "Clari; or, The Maid of Milan," by a young American, John Howard Payne; and sang Home, Sweet Home.

The song was a hit. But Payne never received a nickel for it. That was before copyright laws. For the opera, which was interred after 12 performances, he received 50 pounds.

This is one of three or more copies of this most successful expression of nostalgia in Payne's handwriting. The Eastman School of Music at Rochester, N. Y., has the entire manuscript of Clari; or, The Maid of Milan, including the lyrics of Home, Sweet Home.

The Pennsylvania Historical Society in Philadelphia has a copy of the lyric written by Payne. Tradition has it that the copy to be exhibited here was written for Dolly Madison.

As to the music, Payne could not write in the diatonic scale, and he wrote the words to the measures of a song called Ranz des Vaches, whose composer seems to be unknown.

According to legend, Payne is supposed to have written his sentimental verses about home while wandering on a foreign shore in difficult circumstances.

The truth was that he was in one of the prosperous periods of his existence and comfortably ensconced in Paris.

When it comes to Payne, truth is better than legend. There is one thing that can't be taken from him—he had an interesting life.

He was publishing a critical review of the New York theater at 14. At 15 he wrote his first play. At 16 he made his debut as an actor playing Romeo and Hamlet and even King Lear. He was a sensation for 1 year, 1809; a failure in 1810. Friends raised $2,000 for him and sent him to conquer the London stage when he was 22. He was not a success. He returned to writing plays with successions of success and failure. He leased Sadler's Wells Theater to produce one of his own melodramas, but the financial fiasco landed him in Fleet Street Prison for debt.

He fell in love with Mary Wellstonecraft Shelley, the author of Dr. Frankenstein, and widow of the poet. She told him she was in love with Washington Irving.

He returned to America 9 years after the first singing of Home Sweet Home, poor but famous. After 10 years of precarious literary existence, friends got him appointed United States consul at Tunis. He died there on April 9, 1852.

Thirty-one years later, W. W. Corcoran, Washington's wealthiest citizen, arranged to have Payne's body brought back from Tunis and reburied in Oak Hill Cemetery in Georgetown on the wooded slopes of Rock Creek. It was quite an event. The procession formed at the Corcoran Art Gallery (now the Court of Claims) at Pennsylvania Avenue and 17th Street NW. President Chester A. Arthur, the Cabinet, the diplomatic corps, the members of the Supreme Court, and Members of both Houses of Congress were in the carriages. Bands played and the Washington Rifles marched.

Payne's monument in Oak Hill draws an occasional pilgrim. His bust, atop a tall pedestal, shows that he was a handsome man. In the grass nearby is the stone slab under which he was buried in Tunis. For some unknown reason it says he was born in Boston. He was born in New York.

Salute to 4-H Youth

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. McGOVERN. Mr. Speaker, more than 2,165,000 young people throughout the Nation belong to the 4–H Club, which is one of the finest youth organizations in existence today.

Last week, communities throughout the country honored these young boys and girls between the ages of 9 and 21, through various observances. It is only fitting and propper that we should pay tribute to each and every one of these young people and their leaders, who have dedicated their hearts, hands and minds to better living and greater service to their country.

I am proud to say that South Dakota has 15,692 members, who make up some 1,300 4–H Clubs across the State.

By tradition, the 4–H Club has emphasized the importance of family living and the development of wholesome attitudes and activities on the part of rural youth.

In addition, the 4–H Club has taught millions of farm youth the vital need of improved farm methods and the application of scientific findings to the production of food.

To sum it up, the 4–H Club program has specifically aimed its activities toward the development of more responsible citizens. Its past record is eloquent proof of its success. Even today, the rate of juvenile delinquency is practically nonexistant among its millions of members.

As further tribute to this organization I wish to include in my remarks the following editorial from the Yankton Daily Press and Dakotan of March 5, 1958:

NATIONAL 4–H CLUB WEEK

An honored American institution is being given well-deserved special recognition during the March 1–8 period. The occasion is National 4–H Club Week. This year its theme is 4–H Salute to Parents.

The week will be highlighted in Washington, D. C., when six top 4–H members present the annual 4–H club report to the Nation. This will summarize 4–H accomplishments in stories and pictures and pay special tribute to parents who help to make the achievements possible. It's expected that these 4–H'ers will review the report personally with President Eisenhower at the White House.

More than 2,165,000 young people are now members of the 4–H Clubs. The overall purpose of the week is to inform the public about the meaning and value of the 4–H program, to invite more boys and girls to join, to assist new members in starting 4–H projects, and to honor parents and the 358,000 volunteer leaders who help to guide the work in some 90,000 local clubs throughout the 48 States, Alaska, Hawaii and Puerto Rico.

The 4–H'ers carry on widely varied projects. There is recreation as well as work. Character development and good citizenship are their most significant goals. They learn by doing and their motto is "to make the best better." Here is an attitude that is urgently needed in today's discordant world.

One way that Yankton business people can help promote the 4–H Club program in Yankton County is by supporting the farmer-businessman dinner April 8, sponsored by the agriculture committee of the chamber of commerce. Four-H club families throughout Yankton County will be serving the banquet, and all proceeds from the affair go to the building fund of Yankton County 4–H Clubs, Inc.

Ticket sales are in progress this week by members of the chamber's agriculture committee.

A New Birth of Freedom

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. FOGARTY. Mr. Speaker, on last Thursday, February 27, 1958, I had the happy privilege of addressing the 22d annual meeting of the Davis Memorial Goodwill Industries at the Hotel Statler, here in Washington, D. C.

As I said at that time, Goodwill Industries has certainly been true to its mission—a mission based on compassion and humanity and one for which they should be publicly commended. Its record of achievement over the years has been outstanding, and the help and encouragement it has given the handicapped can truly be termed a new birth of freedom for those who, as a result of birth, accident, or disease, suffer mental or physical affliction.

Because of the high regard in which this organization is held, I was deeply moved to be the recipient of its national award for my "good will toward the handicapped." You may be sure that I shall prize this citation always, and I am pleased to have this opportunity to publicly thank the officers and members of Goodwill Industries for so honoring me.

Mr. Speaker, under leave to extend my remarks, I include the address made by me at the luncheon meeting:

A NEW BIRTH OF FREEDOM

Mr. Chairman, distinguished guests, professional and volunteer workers of the Davis Memorial Goodwill Industries, friends of the handicapped, I am very happy to be with you today, because it is almost like being home with my own constituents in Rhode Island. As you know, a politician (and I consider politics one of the most necessary and honorable professions) is always hard put to turn down a speaking invitation within his own congressional district. And, although we are not in Rhode Island, I feel that I am talking with a special constituency, those interested in the handicapped.

As you have been told, since 1946 I have acquired a special group of constituents—those who are dedicated to giving greater equality of opportunity to those among us who because of birth, accident, or disease have become handicapped. The House Subcommittee on Appropriations which I have the honor to chair has consistently sought new and imaginative ways of waging war on disability. We have enlisted for the duration of this conflict and I can pledge to this audience the continued interest, enthusiasm, and legislative support of programs which seek to change disability into ability, to remove certain indignities under which some handicapped today must labor, and to guarantee, insofar as it is possible in this imperfect old world of ours, that the men, women and children whom God in His infinite wisdom has chosen to suffer mental or physical affliction may do so with a maximum of dignity and a minimum of suffering, neglect, or misunderstanding.

I am indeed pleased to accept your kind invitation because it gives me an opportunity both to compliment Goodwill on the excellent work it has been doing these past few years and also to tell you about a new piece of legislation which should be of interest to all who work with and for the mentally and physically handicapped of our great country. The volunteer spirit so well exemplified by your fine board of directors and ladies' auxiliary, is one of the great things about our beloved country, and through you I wish to pay tribute to the more than 120 local Goodwill Industries throughout the Nation who have been in the forefront of this modern crusade for greater equality of opportunity for the handicapped.

Since passage of Public Law 565, the Vocational Rehabilitation Amendments Act of 1954, as amended in 1956, 48 Goodwill Industries in 23 States have received Federal funds totaling $855,193. In order to receive these funds under the grant expansion program, local Goodwill agencies with community support have poured an additional $432,000 into this program which has helped give a new dynamism and imagination to work for the handicapped.

According to a report prepared by your national headquarters, the results have been dramatic and have proven that the effort was well worth the cost in time and talent. We in the Congress are sometimes accused of being overly concerned with statistics and with figures, but those of us who are responsible for saying "yes" or "no" to these new pieces of legislation as they come along are always confirmed in our enthusiasm when we see such reports as yours, stating that between September 1955 and September 1957 the 48 Goodwill Industries receiving assistance grants showed an increase of 26 percent in the number of handicapped persons served, at a time when other Goodwill Industries were increasing services by only 16 percent.

Of course, we who live here in the Washington area are all aware of the wonderful new Rehabilitation Center which Goodwill has built to better serve the area and the Nation under provisions of Public Law 565. Perhaps less generally known to this audience is the establishment in other areas of 9 sheltered workshops, 9 special projects to better serve the severely disabled (too long the forgotten people in this field), and the expansion of services by some 30 local Goodwill Industries through acquisition of vitally needed equipment. I have summed up much of the progress in a single paragraph when I could have spoken for hours on what this means to people and to our country.

However, dramatic as has been the progress of the past, we must ever look to the future. In summary, I should like to quote from the last paragraph in the introduction of your Goodwill Industries of America report, for it best expresses my own reaction and that of my fellow colleagues on the Hill. Your report says in summary, "this is indeed a magnificent example of Government and community cooperation working successfully to meet an ever-increasing challenge to serve the Nation's handicapped."

But now to the future. On February 10 of this year I had the great honor to introduce in the present Congress, H. R. 10608, a bill proposing the Rehabilitation Act of 1958. As you know, we generally try to explain the purpose of legislation in the first paragraph of a bill. This particular bill is 21 pages in length and the first paragraph reads as follows:

"To provide evaluation of rehabilitiation potentials and rehabilitation services to handicapped individuals who as a result thereof can achieve such ability of independent living as to dispense with or largely dispense with the need of an attendant at home, to assist in the establishment of public and private nonprofit workshops and rehabilitation facilities, and for other purposes."

I can almost hear my friends in the audience whispering, "What a mouthful." However, the key words in this all-inclusive paragraph are those which trigger the three major sections of the bill, namely, independent living, workshops and rehabilitation facilities, and evaluation services. I'd like to share with you some comments and ideas on each of these sections because they have great meaning to Goodwill Industries and, in time, could well be as vital and meaningful for your local industries as have been certain sections of Public Law 565.

First, I'd like to highlight the five findings of fact which serve as background material for those considering this legislation and for the State and local groups which must understand and implement it. The Congress has found, through expert testimony and its own staff research that—

1. Many severely handicapped persons, including the mentally ill or retarded, and older persons, now ineligible for vocational rehabilitation, as a result of independent living rehabilitation services can achieve such a degree of independence that institutional care can be terminated, need for attendant's care at home can be ended or substantially reduced and, in many instances, these individuals will be found to be capable of vocational rehabilitation and will become gainfully employed.

2. Independent living rehabilitation services ends or minimizes the public and family burden, contributed to dignity and self-respect and is in the public interest.

3. There is a grave shortage of rehabilitation facilities where independent living and vocational rehabilitation services are provided the severely handicapped.

4. There is a grave shortage of sheltered workshop facilities wherein work capacities of severely handicapped can be evaluated and developed, and can also be utilized in productive work.

5. Federal grants for the above facilities and services are required in the public interest as a necessary expansion of present grants under the Vocational Rehabilitation Act.

As you can see, the Congress hopes to do something specific and special for the severely handicapped and to do it as a reasonable extension of present services, under existing Federal-State programs and in a manner which will make it possible for local groups to undertake additional steps in this partnership of "Government and community cooperation."

At the time H. R. 10608 was introduced, I said that States would be able, when the bill was enacted, to rehabilitate people to enable them to achieve a level of independent living so as to dispense with institutional care or attendant care at home. I feel that freeing such disabled people of their physical dependence on institutions or their families will not only contribute to their personal dignity and self-respect, but also sharply cut the high costs that many communities are encountering in taking care of their disabled.

Independence has long been a hallmark of America. We were founded on a declaration of independence and we have grown and prospered and increased in world leadership as we maintained our own independence and helped assure our friends in the world community of nations of their continued independence insofar as we were able. Shall we have two kinds of independence in our country—one for the able-bodied and another for the handicapped? I think not and for this reason I am hopeful that the public will understand what this bill does and that the Congress will write a new declaration of independence for the handicapped in enacting this legislation. It has been many months on the drawing boards and has passed through the hands of many of the most distinguished professionals in and out of Government as we worked to perfect a document which can mean so much to so many.

Our Founding Fathers were writing as much for 1958 as for 1776 when they said, "We hold these truths to be self-evident: That all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness."

There can be little life, liberty, or pursuit of happiness for many Americans who today live under the bondage of severe disability. It is our hope that through the independent living provisions of H. R. 10608 we can help assure a greater equality and a greater enjoyment of those unalienable rights which belong to all Americans, including the severely disabled.

The independent living rehabilitation services section would appropriate $10 million this fiscal year and $20 million next fiscal year so you can see that it is a program of substance and one which may provide a major breakthrough in local services to the severely handicapped, a breakthrough I might say that cannot come too soon.

Many public and private groups are now taking admitted long shots in providing rehabilitation services to severely handicapped persons, gambling that the end result will be competitive employment. This bill will lessen administrative pressures on those making decisions and enable findings to be made based more upon justice rather than possible employment. For who among us in work with and for the handicapped can't name person after person who, after being declared nonfeasible by competent authority on the basis of the best facts available, has confounded all the experts and gone forward with indomitable spirit and proved feasibility by actually going out and getting a job and making good at it?

Medicine is not yet an exact science. Counseling is not yet, nor will it ever be, the final answer to inner motivations. The human spirit has yet to be measured exactly in individual cases, probably because there is a spark of Divinity in all of us and who can measure God at work in His creatures? So, we propose to make it possible to provide services to men and women to enable them to free themselves from institutions and from hourly dependence upon heroic family ministrations, while at the same time cutting local costs of institutions and freeing the dedicated families of all or part of the crippling burden of waiting hand and foot upon their loved ones for want of the modern, almost miraculous, medicine of vocational rehabilitation.

Under the third title, "Workshops and Rehabilitation Facilities," the bill provides 10 million this year, 12½ million next year and $15 million for the year ending June 30, 1961. Like the other title, the bill provides for additional sums as decided upon by other Congresses.

As you know, the Hill-Burton bill which was proven such a boon to our care for the crippled and disabled, is medically or hospital-oriented. This title would be community-oriented and would emphasize vocation aspects rather than medical. Thus, it is a logical extension of Hill-Burton and would put on a permanent basis one of the lapsed provisions of Public Law 565 which made it possible to partially finance some workshops and rehabilitation facilities. This construction section allows more elasticity to the States and makes it possible to provide more communities with workshops serving the severely disabled. This particular section could be more helpful to Goodwill than that part of Public Law 565 which was previously mentioned, the grant expansion program, for you could obtain matching funds for expansion or development of workshops.

The last major title of the bill provides for rehabilitation evaluation services. This will be a Godsend to the handicapped and also a great timesaver to the community once it is tried and understood for it short cuts the agonizing trial of the handicapped from agency to agency, from referral to referral each with its duplication of questions, forms, findings, and evaluations. It makes possible a central referral point where diagnostic and other services are done but once, probably in greater detail for better results both to the client and the community agencies which are trying to serve him. We hope to speed up treatment through better referrals based on better findings at great savings in professional time and talent and considerable lessening of the wearing and tearing process to the footsore and heartweary handicapped person who trudges from referral to referral trying vainly to find where he is eligible, where he has rights, where he is nonfeasible and where he can get services.

This provision also should be of real interest to Goodwill Industries across the Nation for you could expand your present vocational evaluation work for the severely disabled, and, as you know, many self-help clients are useful and valuable prospects for your workshops or homebound programs. In going into this program, you would be helping materially in raising the standards of present evaluation services in many areas, in saving local tax and contributed money by making information available to interested agencies without making them dig for it and by generally increasing the professional competence of all workers in this important field.

In conclusion, I should like to compliment the Davis Memorial Goodwill Industries upon another year of magnificent service to the Washington area. I was fortunate to have an advance copy of your annual report and I was thrilled at your past year of progress, at your modern rehabilitation center, and at the promise of greater service when your new building is finished in time for this annual meeting next year. I am particularly struck by the quotation by Betsey Barton in your report where she says, "Freedom of spirit, freedom within * * * is the most important freedom of all." That certainly summarizes the feeling of the Congress as we devote ourselves to assuring a new birth of freedom for the severely handicapped.

And, I would be remiss in the presence of officers and staff members of Goodwill Industries of America whose advice and counsel have been so generously given to the Congress and to me personally, if I did not also pay tribute here before the bar of public opinion to the splendid work done by Goodwill throughout the Nation as graphically outlined in your recent 1957 report. I was particularly impressed to read that 18 percent of the persons you helped in 1957 were among the mentally and emotionally handicapped and more than 14 percent were aged and infirm. Here you have been true to your mission, a mission based upon compassion and humanity and one for which you are to be publicly commended.

As we work together, the Congress and the States and the public and private organizations of this country, we shall help provide the handicapped of our Nation with a new birth of freedom, a new declaration of independence. And, in the concluding words of the Declaration of Independence, "with a firm reliance on the protection of divine providence," I ask that you who work with and for the handicapped so devotedly join

with Members of Congress in pledging to each other our lives, our fortunes, and our sacred honor, that the handicapped of America may truly enjoy life, liberty, and the pursuit of happiness.

How Freedom Vanished by Vote of the People—A Study of History, Including Modern Times

---

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 15, 1958

Mr. GWINN. Mr. Speaker, some years ago I was in utter distress of mind to see our own drifting, like the rest of the world, into our own variety of modern-day socialism and statism. Ours is, without a doubt, one of the worst.

I tried to get some relief by studying history. I was somewhat relieved to find that the Greek and Roman world experienced generally, long before and after Pericles' time, substantially what we are doing through today.

So it appears that people do live through such times, even though it is painful.

It may be a relief and indeed, some will even find humor in the fact that mankind stumbles and makes mistakes like drunken men do over and over. To some, drunken men are so alike that they are indeed funny. Just so, people are cast into a series of spells by political leaders—who are able to deceive them by outpromising each other—over and over again.

Fortunately, there are a few interludes of freedom from these spells in history. They are known as periods of constitutional restraints which are imposed on the government by the people.

The progress of mankind during such periods is phenomenal and makes the story worth telling. As Burke points out in his English studies, these rare examples in history show that the only genius for government people have lies almost wholly in constitutional procedures and not in the voting processes exercised by the people.

A kind of revelation must be brought to the people of the nature of government. By some process other than the voting process—perhaps by handing down the tablets from the fiery mountain—the eternal principle of right and of government must be proclaimed. Some president or some dictator or even some constitutional convention may affirm these principles.

The people, because of the eternal verities of the principle and the desire to live by moral law, find ways of assenting. A supreme court may affirm these eternal principles and thus a nation may be launched for a period of time which will be willing to be governed by moral and natural laws as programed by the constitutional documents.

Thus it was in my study entitled "How Freedom Vanished in the Ancient World by Popular Vote":

How Freedom Vanished in the Ancient World By Popular Vote

(A study of how majority rule can be used to impose ruthless dictatorship from the earliest times to the Middle Ages, with an observation that the modern day forms of dictatorship (communism and socialism) are likewise imposed by popular vote.)

Interludes of freedom are short and far between.

About 500 years before the birth of Christ, Athens—then the center of the world's civilization—was rapidly falling into a severe depression.

To combat it, Pericles started what would today be called a PWA program. His public works program staggered the imagination. He began with the building of a great temple, called the Temple of Athena Nike. In 9 years he constructed the Parthenon, then art galleries and still more public buildings. Dams were built with PWA money, some wholly unnecessary. Along with all this was his own variety of giveaway programs: public housing, licenses, privileges, loans and contracts—plunder to the faithful voters and members of his political party. He himself dipped into the public treasury too.

All this made Pericles more and more popular. The people elected him Chief Strategos, a title roughly comparable to that of President of the United States. They elected him to this office 15 times. In so doing they violated what one historian called the most sacred tradition in the Constitution—the rotation tradition that had rigedly been observed and which was considered a bulwark against dictatorship. In fact, democracy under Pericles degenerated into liberty of the sovereign people to decide as Pericles thought best. And a majority approved.

The big PWA program brought jobs to a lot of people. Here are some of them, listed by the historian, Plutarch (Pericles, 12): "Carpenters, sculptors, cobblesmiths, stone masons, dyers, moulders of gold, painters, embroiderers, engravers, merchants, sailors, wheelrights, wagoners, drivers, rope makers, flax workers, leather cutters, road makers and miners."

According to the pattern that has come down to this date, Pericles asked for and got from the people all power concentrated into his hands. He could even decide the issue of war or peace. In the end he chose war, as nearly all governments do in the pinch of trouble, threatened resistance by the people, unemployment, and especially fading popularity of the leader. Pericles went to war with Sparta. Most of the experts now agree the disastrous Peloponnesian War was wholly unnecessary. Pericles thought it was. Sparta did not attack Greece. Greece—at the direction of Pericles—attacked Sparta. The Spartan king, Archidamus, did all in his power to prevent war. Neither he nor his countrymen wanted war.

In fact, Archidamus put up with all sorts of insults from Pericles rather than go to war. He received ambassadors from Pericles who taunted Sparta about her shortcomings in the Persian wars. When that didn't work, Pericles "cut inland Greek states off from an outlet to the sea by closing the port of Piraeus which they (the Spartans) had used for many years." He violated a 30-year peace pact by a belligerent act. Plutarch, the historian, said flatly that but for Pericles, the Spartan war could have been avoided.

The real reason for Pericles' decision to go to war was revealed in the plays of the great dramatist, Aristophanes, who said that since Pericles' power and popularity were fading, he saw war as the only way to bolster both.

But the gigantic PWA program of Pericles, and the war expenditures, "left the door open for one type of effective opposition." That was to promise more to the people in the way of government money.

Now take a look at the man who did that:

Cleon

Cleon was a shoe salesman. Like Huey Long, who sold mineral oil, Cleon managed to get around among a lot of people. When Cleon wasn't peddling shoes, he was a cobbler. He had a loud voice, was given to uncouth language. He decided maybe he could outpromise Pericles. So he went around promising the people better pay and shorter hours. The people began to listen to him. He offered more government spending than Pericles ever thought of. That they liked, too.

By this time Athens was in the second year of the war with Sparta, and since the war was unpopular, the prestige of Pericles was slipping. Cleon had support both from the rabble and those who honestly thought the war was a mistake. Although Pericles had taken over most of the democratic forms, he hadn't yet conquered the courts. And Cleon successfully accused Pericles of misappropriating public funds. That was the end of Pericles, and Cleon took over.

Cleon now had to make good. If he was going to keep up government spending, he had to get the money from somewhere. "Under his leadership," says one historian, "Athens extorted every penny she could from the vassal states remaining to her. This fund, augmented by wholesale confiscations of the property of wealthy people, was distributed as a dole to the people. For a short time the people realized higher doles and more leisure, but they were to discover that higher wages would not buy wealth that was not produced."

Cleon had no ethics. He looted the Athenian treasury without compunction. When it came time to submit the annual budget for a vote in the Ecclesia, he didn't submit it item by item, as Athens had once known in the days of democracy. He asked it be approved as a lump sum. Had debate been allowed, Cleon's thievery would have been exposed.

Meanwhile, he put more and more people on the public payroll. A vast bureaucracy was developed. Long after the war with Sparta, thousands were still on the public payroll. Only a feeble democracy survived. Demosthenes describes it "as overrun with salaried paupers."

When at last, in the third century before Christ, Phillip of Macedon destroyed what was left of Greek democracy, he found—as he stood at the gates of the once proud capital—"a hollow democracy in which the people were ground down by poverty and resigned to a spiritless dependence on the state for their daily crusts of bread. The Athenians had long since ceased to take pride in the glory of Athens or any courageous interest in defending free government."

It was the rise of big government, with its one and only policy—government spending—that ruined Athens. Today, as we lok on the ruins of the Parthenon, we should remember that those who choose to ignore the mistakes of history are condemned to repeat them.

Octavius

The next outstanding world figure to use the giveaway programs to get the vote through the forms of freedom was the successor to Julius Caesar. He was the Caesar Augustus (Octavius) referred to in the New Testament as emperor of Rome when Jesus of Nazareth was born. Like Pericles and the rapacious Cleon, he believed in government spending on a big scale. That means big government management and control, which means in turn destruction of individual invention and freedom of choice.

Julius Caesar himself, faced with economic crisis, had contrived to keep his popularity by a combination of (a) extraordinary political showmanship, and (b) a modest amount of government spending. Soon after he came into power in 49 B. C. he made free distributions of corn and oil and even money to the

populace and staged vast shows—wild beast hunts and gladiatorial contests—in every quarter of the city of Rome.

Likewise he stirred the imagination of the people by grandiose schemes, such as diverting the course of the Tiber, cutting up the Campus Martius into building sites, building a huge theater, establishing large libraries, piercing the Isthmus of Corinth, building a gigantic road over the Apennines, and the codification of all existing law.

But Caesar and his friends also conducted a wholesale pillage of public money under his eyes. In his climb to power he had not hesitated to bribe liberally. But before long he was running out of money. How was he to get more? He cast envious eyes on Parthia (Persia). Here were vast stores of all sorts of material wealth. If only he could conquer it. Plainly, it was the only way out.

So he set out to conquer Persia. Some of his rich friends, however, knew that if he came back with the plunder of Persia, he would be powerful enough also to plunder them. And Caesar was ambitious. So one of these friends (Brutus) assassinated him just as he was to leave on the Persian campaign.

No sooner was Caesar buried than the nation plunged into civil war, out of which emerged Octavius as the supreme leader. He had at his command a tremendous amount of war booty. War was the quickest way in ancient times of getting wealthy. Monopoly—by and with the consent of the dictator—was the second fastest way.

Octavius was not only the richest man in the Roman state but he made himself richer after the murder of Caesar by confiscating the estates of his political enemies. Besides, in Egypt he had captured all the treasure of Cleopatra, then believed to be the biggest single fortune in the world. The redistribution of wealth to his supporters and party members bought their votes in his time. These techniques that had been employed for 2,000 or 3,000 years before Karl Marx were simply modernized by him out of facts of history that were very old by his time.

As chief consul, Octavius observed all the outward forms of a constitutional dictatorship created with the consent of the people. He even continued the tradition of having two annually elected consuls, the other being his stooge. From 30 years before Christ to 27 years after his birth, Octavius ruled Rome; but 3 years before Jesus of Nazareth began His ministry, he took over a new office conferred on him by the senate, called the principate. The senate also gave him the complimentary title of Augustus, by which he is known chiefly in history. In his new office he ceased to go through the forms of running for office each year.

He was also elected by the senate pontifex maximus for life. That meant he was the chief priest of the Roman religion. Finally, he was voted the power to issue edicts, and so—for the first time in Roman history—we have government by edict.

By vote of the majority, he was also voted the power to convene the senate at his pleasure, to commend candidates for election to any post, to set aside the act of any magistrate.

Now, how did the citizens of Rome come to yield all these powers, in spite of the lessons of disaster following dictatorship? Did the people have any choice but to follow one dictator after another who could bump off the dictator before him, often by outpromising him?

First of all, as Ferrero notes in his Greatness and Decline of Rome (vol. IV, p. 163):

"To secure his hold of Rome and of the republic without any display of force or undue influence, he patiently worked to attach every social class to the new government, and these bonds were forged of golden chains, delicate and almost invisible, but, nonetheless, strong. Augustus laid down one of the essential principles for the future policy of the Empire—that expenditure should be wide and free at Rome and directed to the profit of every class."

Says Willis J. Ballinger in By Vote of the People (p. 117):

"Only a thoroughgoing reform of Roman capitalism, which would have been directed to releasing the productive powers of private business in the domestic market, could have made it possible for the Roman citizen to earn his living without being dependent on the state. * * * With a prodigal hand, he annulled all the state claims for back taxes * * * he paid the Roman municipalities for land seized from them in the civil war, distributing among them probably 300 million sesterces in hard cash. To the plebians of Rome, that dangerous and disorderly rabble of more than 250,000 men, he distributed 400 sesterces apiece. To his soldiers, who totaled some 250,000 men, he gave 1,000 sesterces apiece and, in addition, a plot of land."

While Octavius was playing Santa Claus in a big way, he further endeared himself to the voters by affirming his faith in Roman democracy. He even announced he had "handed over the republic to the control of the Senate and the people of Rome."

Now, he started a more ambitious public-works program than Julius Caesar ever dreamed of. He built roads and temples and public buildings on a vast scale. His personal fortune was so vast, derived from war booty and inheritance, that he could for a while delay the day when he had to increase taxes at Rome and on the barbarian tribes. But that day was to come. So great was his government spending program that he created in process one of the most powerful political machines ever known in the history of the world. But he did this, using all the forms and trappings of democracy.

All this government spending made him enormously popular. "The evidence," says Ballinger, "is convincing that Octavius was deeply venerated by the people, and that the people on more than one occasion petitioned him to become dictator. Indeed, in one instance, the masses threatened to burn down the Roman Senate if it did not make Octavius a dictator at once. * * * The gradual absorption of power was done by vote of the people. All during the emerging dictatorship, the Roman Assembly continued to exercise its two basic functions—the election of magistrates which, of course, included the Princeps, and the ratification of all laws. The transference of power was ratified step by step by the Roman Assembly. The conclusion is inescapable that, in the last analysis it was the Roman people who destroyed Roman democracy."

Thus under Octavius, Rome passes from the outward form of a republic to an empire and a long line of emperors.

The last and final step was to make Octavius' dictatorial powers hereditary. Thus Tiberius, Octavius' stepson, became his successor. The Roman Senate and Assembly voted to make Tiberius Princeps for life. That was the end of representative government in Rome.

In fact, the truth is that "under a literal rain of jobs, the people surrendered their sovereignty. But when dictatorship became fully established, the picture changed. The necessity no longer existed to court the people. They no longer had any power to surrender. Dictatorial government then changed its tune. It became thoroughly exploitive. The Roman people one day awoke to find that they no longer possessed civil rights and that their lives were at the mercy of the Emperor."

After Octavius came the deluge—government interference with business, with the individual, with the expression of public opinion. Paul Louis in Ancient Rome at Work (p. 21) describes how the state interfered with the marketing of oil, the conditions of carpentering, earthenware manufacture and of house paintings. So much so, adds this historian, that "the masses of people, broken under tyrannical legislation and plunged into incurable misery, did not even dream of emancipation."

Diocletian

Three hundred years after Octavius (284-305) came the Roman Emperor Diocletian, who outdid in state control anything his predecessors, both in the republic and empire, ever tried.

He not only fixed prices and regulated wages, but persecuted Christians in the bargain. The reason he did the latter was that they were the only ones he couldn't control. He wanted to revive the old Roman religion, and the church as an independent organization he looked upon as a menace to his authority.

"Diocletian," says Ballinger, "for all his purple toga and imperial dignity, sounds a good deal like the La Follettes and Bryans of our day. He excoriated the rich men of his era for stifling production and impoverishing the people as thoroughly as many liberal leaders of our own democracy have done."

But what did Diocletian do?

He decided that everything could be remedied, everything straightened out, if only he could fix wages and control prices. That would give a fair break to everybody. But how to do it? First, he must wipe out the last vestiges of local government. There was some local autonomy even under the empire. Clearly, that was bad. So he set to work to centralize all authority in Rome.

He set up a huge bureaucracy, entirely dependent on—guess whom?—the emperor. He filled the ancient capital with thousands upon thousands of civil servants. Everything had to be decided from Rome.

Like Octavius, he was enamoured of a public-works program. He adorned the city with numerous buildings, such as the Thermae, of which extensive remains are still standing.

But Diocletian made himself famous—one of the few Roman emperors to be remembered—by his effort to control prices and fix wages.

Never had the ancient world seen anything like it.

It has gone down in history as the imperial edict of 301 A. D.

The punishment fixed for violating the price-fixing edict was—death.

Pricefixing included cereals, wine, oil, meat, vegetables fruits, skins, leathers, furs, footgear, timber, carpets, and all clothing. There were maximum prices set in great detail for all these articles.

Wages were also controlled, ranging all the way from the wages of laborers to the fees for lawyers and doctors.

The effect of the price-fixing-wage-control edict was disastrous. Business was bound down in a maze of redtape. Trade came virtually to a standstill. The value of money was also rigidly controlled, adding to the confusion.

So many violations were alleged that Diocletian himself pardoned or exonerated many; the tribunes (courts) were clogged; nobody could make any sense out of what was going on. The price-fixing, wage-control attempt was limited to the eastern part of the empire. The law was on the books long after Diocletian died, but enforcement fell by the wayside, and finally fell into abeyance. Technically, it was on the books of the empire at least down to 403 A. D., but long before that it was recognized as impossible to enforce. It was the last and most ambitious attempt in the ancient world to control wages and fix prices. Yet the effort was bound to fail, just as the empire itself centuries later was bound to fall, not only from external assault but internal decay.

Cosmo, dictator of Florence (1434–64 A. D.)

Now we come to the most interesting story of all. No people in the history of the world loved freedom more than the people of Florence, an independent state on the Italian peninsula. They did not have a democracy, as we know it, nor even representative government. But they did love freedom, and they went to extraordinary lengths to safeguard it—but even Florence was taken in by a dictator who beguiled them with government spending—and the end, as usual, was ruin.

In fact, Cosmo founded a dictatorship which lasted 300 years. Yet the citizens of Florence thought they had done everything possible to prevent a dictator from rising.

Florence in the 13th century had a population of about 90,000, but only 4,000 or 4,500 could hold office. They included the merchants, learned lawyers, and great artists. Within this small circle was an intense love of political liberty and an ever-present dread of despotism. Now this small group appeared to have one purpose in common: that was to prevent the rise of a dictator.

To achieve this purpose, they wrote extracautious provisions into the constitution. Let us see how the constitution came about.

In the 11th century Florence was little more than a town in northern Italy. A feudal nobility owned most of the land. Gradually, however, the city of Florence expanded rapidly in 3 centuries, and the merchants—getting together in 7 guilds—wrested political power in the realm from the nobles, so that by the 13th century, the Florentine constitution was an extraordinary instrument of freedom.

By the 14th century, the people—that is, every male resident—had the right to approve or reject any change in the constitution. This did not mean that everybody could hold office in the state. They couldn't as these honors were limited to the merchants and the professions.

Whenever a change in the constitution was proposed, the government had to summon a gathering of the whole male resident population of Florence. Whatever change was proposed was to be carried out by a specially appointed commission. And the question would be put to the people whether such a commission should be appointed.

Thomas A. Trollope in his History of the Commonwealth of Florence (vol. 2) describes the Florentine Constitution and how jealously the merchants and professional class guarded the freedom of the people—for a while.

Instead of having a chief executive or president, they feared the centralization of power in one man, so the executive office or signory was composed of 36 members, with a presiding chairman called the gonfalonier.

Instead of having 1 attorney general, they had 12 attorneys, schooled in constitutional law.

To avoid having a legislature that might be pliant to the will of the executive office, even though the latter was composed of 36 members, the legislative power was split into three houses. Further to prevent the rise of a dictator, the constitution provided that all of the above-named officials were to rotate in office every 2 months.

But the Florentines carried their caution further:

Because they thought the commander in chief of the Florentine Army might become a military hero and thus become a dictator, they provided by law that he must be a foreigner, chosen annually, and thus not eligible for any civil office. Likewise, they provided that the chief of police and the minister of justice must be foreigners, appointed in a similar manner.

Finally, to prevent the rise of a political machine, the Florentine Constitution provided that officeholders (drawn from the special group hitherto mentioned) must be selected by lot. Thus, "the names of all citizens eligible for office were put into borse or purses. Citizens so eligible were business proprietors who were not in arrears in their taxes."

The historian, Trollope (vol. 2, p. 179) goes on to say:

"No people under heaven ever had so much faith in the virtue of haphazard * * * the names of all citizens should be put and drawn by chance for all offices of trust and power * * * for how else can we prevent our rulers from getting to be greater than we?

If we appoint the most able, his very ability will help him to put the yoke on our necks * * * we will trust no man. * * * Then, at all events, I am as likely to be king as you. And in order that every dog may have his day, and we may be all kings in our turn, we will reduce the term of office to 2 months. There surely can be no danger of a man making himself great in that time."

Now one would think, on the face of this, that it would have been impossible for a dictator to have arisen in Florence. The people had written extraordinary precautions into law against the possibility. But they reckoned without the cleverness and the government spending ideas of one Cosmo di Medici.

Cosmo—the people called him that—inherited, like Octavius in Rome, a great fortune. His father, Giovanni di Medici, had been one of Florence's richest bankers at a time when Florence was the banking center, or financial capital, of the world. The Florentine bankers in the 13th century loaned money even to the kings of England and of France. At this time Florence had 120 banking firms, each with branch offices all over Europe.

Cosmo's father had made the family name revered among most Florentines by leading a reform in the tax system, whereby the rich paid their fair share of taxes. On the death of his father, Cosmo fell heir to the leadership of the liberal party. There was the counterpart of the liberal and conservative party running all through this history.

There was a great difference between Cosmo and his father, however. Cosmo was ambitious. He saw dreams of personal power. To get it he remained in the background. Like Boss E. H. Crump of Memphis, he held no political office—for a while. Instead, he went around quietly paying up the tax arrears of citizens qualified to hold office. Next there were rumors that the borse or purse, from which officeholders were selected by lot, had been tampered with. The right names seemed to be coming up all the time. In fact, a blind beggar by the name of Benedetto "made himself rich by predicting what names would come out of the borse when a new signory was drawn."

In addition, Cosmo—still keeping in the background—lent money to influential men. It was not long before every important citizen in the commonwealth was indebted to him. His behind-the-scenes power got to great that the signory, not yet under his control, ordered him into exile.

Yet this did not face Cosmo. Even from exile he continued to dictate things. Within a year, however, a new signory, favorable to him, came into power and he was brought back into the city as a hero. The deft way he had manipulated "the selection by lot" of the signory now paid off. The members bent to his will. They summoned a parliamento of the people, and it granted him dictatorial power for 5 years!

Never had Florence seen anything like it. He had seduced the processes of free government by his money bags, and now he started on a spree of government spending.

He started what today would be called a WPA and PWA. He ventured on a gigantic public hearings and even churches.

He established his dictatorship in Florence in 1434. For 30 years he ruled with a despotic hand—so cruel that many murders were committed by his henchmen and no man was brought to justice for them.

The technical name of the Signory had been the Priors of Signory. He changed the name to Priors of Liberty. Why? Machiavelli amused all of Europe by explaining: "He did this so that the people might at least preserve the name of the thing they had lost."

Gradually, government spending increased, instead of lessened, and Florence sank from the foremost republic in the world to a tax-ridden tyranny. The people were abandoned to their poverty, the slums of Florence became models of filth and disease. For 300 years the dictatorship, initiated by Cosmo, continued until fell before the invading armies of a united Italy.

Significantly, however, Cosmo acquired his dictatorship by majority vote, and until he had firmly intrenched himself he appeased the masses by government spending until the people were finally reduced to incredible poverty. Yet never before had so many safeguards been thrown around republican government, all to no avail in the face of an ambitious man, greedy for power with his supporters and beneficiaries corrupting the voters by taking from those having the fewer votes and giving the proceeds to those with the greater number of votes.

We now move toward communism by majority vote, while observing all the forms of democracy.

A STUDY OF KARL MARX'S COMMUNIST MANIFESTO AND THE EXTENT OF ITS TRANSLATION INTO FACT IN THE UNITED STATES OF AMERICA

The Communist Manifesto was published in 1848. It is the official creed of the Communist Party. In 1948 the 100th Anniversary edition of this book was published. The following are the major goals in the modern giveaway programs already tested in history as sure to work and get the vote of a majority of the people, as set out in the official Communist Manifesto (pp. 32, 33, 34). We are all quite familiar with them. Most of the countries of the world have adopted the concepts, including the United States. It has adopted the principle of Marx but in some cases stopped short of Marx's total consummation of his goals. Having adopted the principles, how can we stop or reverse the course?

1. Abolition of property in land and application of all rents of land to public purposes.

How far has this happened in the United States of America?

To get an understanding of the answer, we must look at the traditional land policy of the Government. As Admiral Ben Moreell has pointed out, the early American policy was to get this land into the hands of private owners as quickly as possible. Sometimes it was given away, but always the idea was to get it into the hands of private owners, whether it be a railroad, a college, an individual homesteader, or others.

Now, however, the reverse is true. More and more land is being taken, for public purposes. So what has happened? One-fourth of all the land now in the confines of the continental United States is owned by the Federal Government.

Thus, the Federal Government owns 85 percent of Nevada, 71 percent of Utah, and 69 percent of Arizona. There isn't much land left to acquire west of the Mississippi and the trend is steadily upward.

2. A heavy, progressive or graduated income tax.

In this, our beloved country has out-Marxed Marx.

In 1894 a revenue bill was passed by Congress which provided for a graduated income tax (act of August 27, 1894).

The law was declared unconstitutional by the Supreme Court on April 8, 1895 (*Pollock*

v. Farmers Loan and Trust Co.). It was held invalid on the ground that the law imposed direct taxes, not apportioned among the States as required by the Constitution.

On February 25, 1913, the 16th amendment to the Constitution was adopted authorizing the imposition of income taxes without apportionment among the several States.

The tax, says Moreell, "was described by its proponents as a modest levy, with a normal rate of 1 percent on personal income up to $20,000, a surtax to a maximum of 6 percent of $500,000, and a flat corporate tax rate of 1 percent. The sole purpose, they said, was to produce revenue. When a Senator protested that the normal rate might some day rise to the confiscatory level of 10 percent, he was shouted down in derision."

Instead of 10 percent, the personal tax has risen to more than 90 percent in the highest brackets. The tax acts as a powerful brake on private capital, this making it easier for the Government to step in with public capital.

Take a specific illustration in line with the Marxian ideal of wrestling, by degree, all capital from the owners of private property. In 1951, says Moreell, "the total of the income-tax payments to the Federal Governmen by the largest company in each of the twenty largest industries was three times the total amount that was paid of the owners of the businesses. That is, for every dollar set aside for Federal taxes and dividends by these companies, 75 cents went to the Federal Government and 25 cents to the stockholders."

3. Abolition of all right of inheritance.

Not only has the inheritance tax taken as high as 75 percent of the grants in the highest brackets, but to this has been added the gift tax, something Marx never thought of.

When one of the Du Ponts died recently, leaving an estate of $75 million, a total of 75 percent of this was paid out to the Federal Government in inheritance taxes. This, too, is moving in the direction of the Marxian goal "to wrest, by degrees, all capital from the bourgeoisie."

To quote Moreell: "You may condone this action, saying 'Oh, well, there is plenty left,' but I speak here of a basic moral principle, the right to retain property."

4. Confiscation of the property of all emigrants and rebels.

American citizens of Japanese parents, who were suspected of possibly becoming rebels, were deprived of their property during World War II. When the war was over the Government compensated them for it at a fraction of what it was worth.

5. Centralization of credit in the hands of the State, by means of a national bank with State capital and an exclusive monopoly.

Already proposals are before the Congress, with the support of the New Dealers and Fair Dealers, to buy stock of the Federal Reserve bank and place title in the Government. Then all new Government money requirements, including those for retiring outstanding bond issues, would be met by delivering non-interest-bearing bonds to the banks, which "would establish corresponding credits on their books." Better than that: the United States variety of socialism issues interest-bearing Government bonds at 3 percent tax-exempt. For example, 3 percent public housing bonds in the hands of those in the 80 to 90 percent tax bracket is better for them than investments in 13 percent dividend stock. Thus public ownership thrives—private investment dies. Lenin said the surest way to destroy the capitalistic system is to destroy its currency. Government control of credit and interest rates is a movement in exactly the direction Marx had in mind.

6. Centralization of the means of communication and transport in the hands of the State.

Both the FCC and ICC have made a start in this direction. The railroads, for example, are not only sometimes taken over by the Government, but they are so strictly controlled they cannot, with propriety, be pointed to as examples of private ownership and operation. Add to this situation the heavy Federal subsidies to steamship lines, airlines, airports, bridges, etc., and we have the beginning of overall controls.

7. Extension of factories and instruments of production owned by the State, the bringing into cultivation of waste lands, and the improvement of the soil generally in accordance with a common plan.

Here we have a record of many manufacturing plants owned outright by the Federal Government. Then there is the entry of the Federal Government into the ownership and operation of electric powerplants. Federal ownership in this field (of plants already in operation) has reached 10.7 percent of the total, and by the end of 1955 it will be 15.4 percent. If State and local plants are added, the total is 23.8 percent.

In another field—synthetic rubber—in the first 6 months of 1952, Government-owned plants produced 62.3 percent of the Nation's consumption of new rubber.

8. Equal liability of all to labor. Establishment of industrial armies, especially for agriculture.

This one plank has not gained wide acceptance here, despite memories of the Works Progress Administration and the Civilian Conservation Corps. Yet the American Communist Party in 1921 advocated the closed shop as essential to the creation of a Red America.

Nor should the Temporary Industrial Disputes Settlement Act of May 26, 1946, recommended by President Truman, be forgotten. This empowered the President to draft workers and management into the Army. The House of Representatives, by overwhelming majority vote and under suspension of the rules, voted it 306 to 13. In the Senate, Senator Taft led the fight to eliminate the draft provisions, and was successful; the bill then was passed and died in conference. Said Taft at the time: "I wish to say that it seems to me that section 7 goes further toward Hitlerism, Stalinism and totalitarian government than any provision I have ever seen proposed in any measure."

9. Government planning in agriculture and industry.

We appear to have accepted the fundamentals of this plank. Proposals are now under consideration to force the decentralization of industry under the emergency powers of the Defense Production Act. Likewise we have the example of the Truman-sponsored Brannan plan, "a scheme to lock a large segment of agricultural production in the vise of bureaucratic controls." Rent, wage, and price control are commonly accepted policy.

10. Government-controlled schools.

The president of Harvard University recently advocated the abolition of all privately operated grade and secondary schools. In a recent Columbia University study, James Earle Russell reported: "The Federal Government in a typical year (1947) spent $500 million of the $1 billion it cost the colleges to operate—or 50 cents of every dollar." The report shows higher education has become a major concern of the Federal Government. The Supreme Court has already laid down the principle: "It is hardly lack of due process for the Government to regulate that which it subsidizes." How far off is regulation?

Observes Ben Moreell of these 10 planks: "We cannot imprison or shoot an idea. We can only study it and try to understand it. If the ideas we sponsor—knowingly or unknowingly—are Communist ideas, democracy will be of little help. It is just as much a Communist idea if the majority impose it upon a minority * * * as if it is done in the name of dictatorship."

Martin Van Buren (1837–41)

Like a breath of fresh air in a smoke-filled room was the philosophy expressed in the message of Martin Van Buren to Congress on September 7, 1837.

It came at the height of the first great depression to hit the United States. In it President Van Buren turned down suggestions, emanating from both parties, that he take the lead in a program of Government spending. Said the President to Congress:

"All communities are apt to look to the Government too much. Even in our country, where its power and duties are strictly limited, we are prone to do so—especially at periods of sudden distress and embarrassment. But this ought not to be.

"The framers of our Constitution, and the people who approved it with calm and sagacious deliberation, acted at the time on a sound principle. They wisely suggested that the less Government interferes with private pursuits the better for general prosperity. * * *

"It is not the Government's legitimate object to make men rich or to repair, by direct grants of money or legislation, losses not incurred in the public service. This would be substantially the use of the property of some for the benefit of others."

This philosophy, expressed by the President of the United States, raised a storm of objection in Congress, in both Houses, but the President stood his ground.

Daniel Webster professed to be shocked. Said Webster, addressing the Senate, "I confess this declaration [of the President] is to me quite astounding. And I cannot think but that—when it comes to be considered—it will be a shock to the country. This avowed disregard for the public distress on the ground of alleged want of power; this exclusive concern for the interest of Government and revenue—now for the first time drawn—between the interest of the Government and the people, must surely be regarded as commencing a new era in our politics."

The press echoed with Webster's denunciation, but suddenly support came to the President from a strange quarter. John C. Calhoun and his followers had all but withdrawn from the Democratic Party. Now, almost overnight, they returned. And Calhoun himself, although ill and hardly able to stand, took the floor of the Senate and alined himself squarely on the side of the President of the United States. Said Calhoun:

"I dread the doctor more than the disease itself. * * * I rely more on the growing crops, on the cotton, rice, and tobacco of the South, than all the projects and devices of the politicians. * * * We have arrived at a remarkable era in our history. The days of legislative and executive encroachment * * * and extravagant expenditures are past for the present. We are about to make a fresh start. I move off under the States-rights banner, and go in the direction in which I have long been so long moving."

A revolt against Van Buren's policy broke out in his own party, however, led by Nathaniel Talmadge, of New York, and William C. Rives, of Virginia. Nevertheless, the President was able to muster enough support, including Calhoun and his followers, to avert upset of his leadership.

And so we conclude, that where the Constitution has been torn down, the first step is to repair and reassert it. The way to do it is clear. Who will do it?

Retired President Judge W. Alfred Valentine of Wilkes-Barre Honored

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

JURISTS CITE VALENTINE AS INDIVIDUAL, JUDGE

Judges and lawyers from Luzerne County and throughout the State gathered last night at Hotel Sterling to honor retired president judge W. Alfred Valentine at the annual dinner of Wilkes-Barre Law and Library Association. An estimated 250 persons turned out to pay tribute to Judge Valentine, who recently retired after 29 years on the county bench.

Keynoting the testimonial event was President Judge John J. Aponick, who spoke on behalf of the court of common pleas. Outlining Judge Valentine's long career of service, Judge Aponick stated the retired judge "has made an indelible impression on the judicial history of our county."

Quoting Greek philosophy, Judge Aponick called attention to the four qualities a judge should possess as set forth by Socrates: "to hear courteously, to answer wisely, to consider soberly, and to decide impartially." Claiming he would add dignity as the fifth, the speaker said: "Judge Valentine possesses all of those five qualities to a high degree."

"From the time he walked into the courtroom and ascended the bench, there was an atmosphere of quiet dignity pervading the courtroom," Judge Aponick said. "All of those present had an instinctive feeling that here justice would be dispensed with kindness and impartiality," he added.

Terming Judge Valentine "a guiding force and an able adviser to the court en banc ever since he became president judge," the speaker declared: "During his 16 years as president judge, the spirit of good will and cooperation among the members of the court has never been greater."

"He loved the law for itself—not as a means of livelihood," Judge Aponick maintained, adding that "it was his very life."

Lauding Judge Valentine for "his infinite capacity for hard work" and "his remarkable memory," Judge Aponick called attention to the fact that for long periods of time Judge Valentine performed the major portion of the work of the entire court. Citing the retiring judge's term in juvenile court, the speaker said: "No one can ever know how many boys and girls he has saved from a life of crime by his wisdom and insight into character." He continued: "Only Almighty God knows all of the tremendous good he has done in guiding the wayward youth of this county into the paths of right."

Pointing out that Judge Valentine will be "gravely missed and his place will not be easily filled," Judge Aponick said: "Despite the reputation he has gained throughout the State as an able and conscientious judge, he has remained the same humble and unassuming person he always was."

"Looking back on Judge Valentine's career and my long association with him brings to mind the legend of Abou ben Adhem who received a visit from an angel who was writing in a book of gold," Judge Aponick said, adding, "Ben Ahdem asked the angel what he wrote, and the angel replied: 'The names of those who love the Lord,' Ben Adhem asked if his was one and the angel replied in the negative. Then Ben Adhem said: 'Write me down as one who loves his fellow men.' The next night the angel returned and displayed the names on the page, and Ben Adhem's name led all the rest.

"I believe we can draw a parallel to that in the career of Judge Valentine," the speaker stated. "His only aim was to be able to say: 'I have done my work, I have dispensed justice as I saw it, and I have tried to do the best I know how to my fellow men.'"

Judge Aponick concluded: "So when the book is finally closed and the great judges of Pennsylvania are set forth on the golden pages for all mankind to see, we may expect that, like Ben Adhem, lo, his name will lead all the rest."

Speaking for the superior court was President Judge Chester H. Rhodes, who praised Judge Valentine as "an individual devoted to serving the people of this Commonwealth" and as a judge who has carefully adhered to the role of judicial impartiality.

"He has set an outstanding example in the impartial administration of justice and has displayed great judicial ability in his work," Judge Rhodes said.

Following the speakers, Attorney J. Thirwall Griffith, president of the association, presented a portable television set to Judge Valentine.

Toastmaster of the affair was Attorney Joseph L. O'Donnell. Attorney John L. McDonald was chairman of the dinner event. Invocation was given by Rev. Jule Ayers, pastor of First Presbyterian Church. Benediction was given by Rt. Rev. Msgr. Francis A. Costello, of St. Mary's Church, Wilkes-Barre.

Senator Smathers and Inter-American Economic Solidarity

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. SIKES. Mr. Speaker, I would like to call the attention of the Members of the House of Representatives and the United States Senate to two editorials appearing in the Americas Daily for February 25 and February 28 concerning a speech made by my colleague and a Member of the United States Senate, the Honorable GEORGE A. SMATHERS, on inter-American affairs. At this crucial time in our history when it is so important that we in the United States promote a better understanding between our Government and the Latin American countries, I think Senator SMATHERS' speech merits serious consideration and study. The editorials are as follows:

[From the Americas Daily, Miami Springs, Fla., of February 25, 1958]

A SPEECH BY SENATOR SMATHERS

On February 17, 1958, GEORGE SMATHERS, the Senator from Florida, gave in the Senate a speech of historical importance which will establish an era in inter-American relations. He talked about the position of the United States concerning the Latin American Republics.

Senator SMATHERS lamented that, perhaps because of the proximity of neighbors, world and historical perspective are not given the problems of a region that already has a population of 183 million, compared with 172 million of the United States—a population which, by the end of the century, will have reached 500 million. The American Republics, just beginning to grow, have the greatest wealth in the world and, as in any growing process, it is during adolescence that support and help are required. Even during this growing up period, a country like Venezuela, for example, is her biggest customer in Latin America, and one of the leading in the world, followed by Mexico, Brazil, and others. Latin America absorbs 33 percent of the total United States exports; but, nevertheless, when it comes to aid, it seems there is scantiness because she is considered safe. While millions are scattered in other parts of the world, and the Senator does not object but rather applauds that aid, no steps are taken for a guaranteed trade between the Americas, with price stabilization, with enough investments, of private and public capital, with assurances that no restrictions or limitations will be set on the entry, of raw materials into the United States. He recalls that Latin American dependency on the United States market is enormous: Colombia, Mexico and Cuba sell two-thirds of their total exports to this country; whereas Peru's exports of lead and zinc to the United States represent 31 percent of her total foreign sales. Venezuela's oil, much attacked for its importation into the United States and representing 90 percent of total Venezuelan exports, is a product which in peacetime complements and, in times of emergency, history has demonstrated, Venezuela is the only foreign source there is from which to obtain this fuel. Is the United States, the Senator asks, buying just to buy? No, because each dollar paid for raw materials and other goods from Latin America returns to the United States to purchase articles manufactured throughout the length and breadth of each and every one of the States of the Union.

Senator SMATHERS, with the vision of a statesman, declares that "the solution of the economic problems of Latin America rests on more loans, a stable trade policy, and inducements to American private enterprise to invest in these countries on an increasingly larger scale." And then, he adds, "Inter-American economic problems have been explored to death in the last 5 years. But the United States has yet to come up with a bold plan to make the Hemisphere a real stronghold of the free world. Although we do not have a plan, we reject virtually all proposals made by Latin America for effective cooperation in inter-American affairs. I would agree that not all their proposals would be completely practical for us, but the point is—we are not coming up with any good alternatives."

Heretofore, the most favorable step taken has been the Reciprocal Trade Agreements Act, enacted in 1934 and now a point of national policy; however, as we stated in a recent editorial, that act has never been in as much danger of perishing as it is now. It is not enough, although it is commendable by all means. Something permanent is required—that will prevent the Latin Americans from believing that, in economic affairs, they depend on the anguish of the United States: In times of emergency, in times of uneasiness, to buy everything, to induce them to change crops, paying rewarding prices, to intensify production of certain raw materials for which there will be no market when peace comes. Such a policy only results in that, in some countries, defensive measures now being taken appear as hostile to American trade.

What the Latin Americans require, in the words of Senator SMATHERS, is "to be assured of stable, consistent trade policies with the United States so they can plan for the years ahead without fear that our doors will be opened wide one moment, then summarily closed next. A swinging-door policy will do us no good in Latin America. We need long-range, consistent trade policies upon which we can all rely."

[From the Americas Daily, Miami Springs, Fla., of February 28, 1958]

SENATOR SMATHERS AND INTER-AMERICAN ECONOMIC SOLIDARITY

Recently we commented on the brilliant speech of Senator SMATHERS, a piece of oratory that, undoubtedly, will have repercussions in inter-American relations. Today, we wnat to point out another aspect of that speech, which will place it among the historic speeches made in the Senate of the United States.

Senator SMATHERS stated: "Most of us have a shallow understanding of the civilization that lies to the south. In reality, Latin America consists of a group of states firmly devoted to principles that the United States seeks to uphold. Down through the years they have struggled valiantly to promote democratic principles." An honest statement, worthy of being taken into consideration; because perhaps the enormity and the universality of this country, causes that in some instances its glance be limited to domestic affairs; and when some outside phenomenon does not agree with the habits he has had from childhood, the average American necessarily becomes confused and does not understand that in other areas there is a different way of reacting to life. Evolution, education, and economic improvement through the industrialization process now making headway in Latin America, will cause the principles of formal democracy to be strengthened in some nations, since there is in all nations a deep sense of human democracy.

In effect, it is through the creation of an economically healthy middle class, through improved living conditions for the people, and through solidarity in economic affairs throughout the hemisphere, that some nations which have not yet reached the development goal we all desire, will reach that level which will permit economic and political stability. In this respect, Senator SMATHERS makes it very clear, the United States has an enormous responsibility, which is that of saving our own continent from the danger of economic penetration by international communism—which penetration would mean an advance in their world domination and an attack against the United States. About this, Senator SMATHERS said: "Herein lies the danger. Our mutual enemies, the Communists, seized upon the fierce longing of our neighbors for more rapid fulfillment of their aspirations. With deceptive promises, the Communists are seeking to infiltrate Latin America both economically and politically." And, as an admonition for the future, he adds: "It is self-defeating for the United States to be exerting itself economically and financially toward other more distant areas of the world if at the same time we do not render the type of assistance needed and asked for by our neighbors in our own hemisphere. We cannot say that we need not help Latin America because Europe, the Middle East, and the Far East are the immediate danger areas in the cold war. The fact is that any Soviet penetration in Latin America could do us incalculable harm."

Political solidarity within the inter-American system having been achieved, the job should be crowned with continental economic solidarity. Blessed be America which has the Organization of American States which has made possible a peaceful coexistence among the States in a climate of respect, understanding, and mutual aid in political affairs. However, the moment has arrived for that political solidarity to be completed with an economic solidarity, as is contained in the spirit of Senator SMATHERS' speech.

If in the previous century, Henry Clay, in the Senate of the United States, took it upon himself to have the United States recognize the political independence of the Hispanic-American nations in their fight for freedom, on February 17, 1958, GEORGE SMATHERS asked that this be complemented by the proclamation of economic solidarity in the Western Hemisphere.

Infighting

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Army Times of March 8, 1958:

INFIGHTING

Assistant Navy Secretary for Air Garrison Norton told a congressional hearing recently that the Army's Jupiter-C missile, which put the Explorer satellite into orbit, was "very, very expensive and rather inefficient." Well, let's see:

As this was written, the Navy's Vanguard project had yet to get off the firing pad at Cape Canaveral. (Oh, it chugged skyward 2 feet one time before toppling, and again it got up to several hundred feet before breaking in two.) Yet the schedule, which looks more optimistic every day, calls for Vanguard eventually to put six 20-inch spheres into orbit.

If Vanguard ever fulfills itself, those little moons will have cost you taxpayers $18.3 million each. And what you'll have at the end will be strictly magnolia (to quote the old song), for there is no practical use for the Vanguard missile as a weapon: it is too fantastically complex.

The other side of the coin: Jupiter-C was built and paid for as a tool in the development of the intermediate range ballistic missile, Jupiter. For similar purposes in developing the Thor and Atlas, the Air Force had its X-17. So the use of Jupiter-C as a satellite-launching device (successful on its first try) came as a complete gift to all of you taxpayers. Its cost had been written off previously for military work. Its components—1 redstone and 15 sergeants, plus 4th-stage engineering—might have cost a million bucks. That takes care of the cost question.

We don't know how Mr. Norton defines efficiency, but this should be pertinent to the record: the Vanguard project is 2½ years old. When Explorer went into orbit it was less than 3 months old as a satellite project.

Further, but for the rockheadedness of a lot of people in the Defense Department and the administration, the Army could have saved millions of dollars and American prestige by launching a 5-pound satellite on September 20, 1956. That was the day a 4-stage Jupiter-C reentry test missile flew 3,300 miles over the Atlantic. Unfortunately, its last stage rocket and satellite had been replaced by dummies on orders from the Pentagon. This was done to prevent the Army from making an unauthorized satellite launching.

Now, once again, the Army faces a highly speculative future in the satellite field. It must still pool its vehicles and its projects with those of the Navy and the Air Force—and hope that the people in control do not make the same error as was made in 1954, when Vanguard got the green light over the Army's project Orbiter.

The outlook becomes less than hopeful when it is realized that the sort of opposition voiced by Mr. Norton is not confined to 1 service or 1 group of interests. The Air Force Secretary, James H. Douglas, has already hinted to Congress that formation of Jupiter missile squadrons for service in allied countries should be reduced while that of Thor squadrons is expanded. He has figures proving that this would cut costs in half. It is understood that an extension of his plan would result not only in the curtailment of Jupiter production but in stopping it altogether.

A similar argument had previously been advanced in trying to gain priority for the Air Force's Minuteman project over the Navy's Polaris. We can anticipate the same kind of infighting in the Thor-Jupiter controversy.

Construction of Armories, Training Centers, and Other Facilities—Resolution

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include therewith a resolution unanimously adopted by Subcommittee No. 1 of the Armed Services Committee, and approved by the full committee, concerning the construction of armories, training centers, and other facilities to accommodate and support the Reserve Forces of the Army, Navy, Air Force, and Marine Corps.

RESOLUTION 3, MARCH 5, 1958

Whereas Subcommittee No. 1 of the House Committee on Armed Services has had under consideration the program of the several military departments for the construction of armories, training centers, and other facilities to accommodate and support the Reserve Forces of the Army, Navy, and Air Force and Marine Corps; and

Whereas in August of 1957 the Secretary of Defense imposed on each of the military departments a limit on the rate of expenditures, which limit necessitated the curtailment of many programs, including the construction of Reserve facilities, by each of the military departments; and

Whereas the construction of all Reserve facilities now authorized would still fail to meet the facilities requirements of our Reserve Forces, and this would remain true even if the Army National Guard and United States Army Reserve were further reduced in strength in fiscal 1959; and

Whereas the several States have appropriated and have available for immediate obligation more funds than have been appropriated by the Federal Government for armory construction in those cases requiring matching funds by the several States; and

Whereas these appropriations will lapse in many of the States unless obligated before the expiration of this fiscal year; and

Whereas this situation is causing undue confusion and delay in the plans and programs of the several States: Now, therefore, be it

Resolved, That Subcommittee No. 1 recommends that the Department of Defense and the Bureau of the Budget be urged to immediately release to the military departments those funds heretofore appropriated for Reserve facilities construction which have been frozen under the expenditure limitation heretofore mentioned.

Labor Leaders' Views on Farmer-Labor Problems

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. ANFUSO. Mr. Speaker, I am in receipt of a copy of a letter addressed to Secretary of Agriculture Ezra Taft Benson by the Amalgamated Meat Cutters and Butcher Workmen of North America which I consider of vital interest. The letter, dated March 6, 1958, is signed by Thomas J. Lloyd, president of the union, and Patrick E. Gorman, secretary-treasurer.

In their letter to Mr. Benson, the two leaders of the amalgamated meat cutters and butchers make reference to his present and past views on certain farmer-labor problems, as expressed by the Secretary of Agriculture in speeches he made concerning wage gains and the standard of living of American workers. They call his attention to the role of the Fair Labor Standards Act and others in improving living conditions not only for labor but for all Americans, including the farmers.

Of particular interest is the following paragraph in the letter to Mr. Benson:

We also continuously said that the worker must have sufficient money to buy the food and fiber the farmer grows, and the farmer must have a sufficient income to buy the products workers make and sell. We believe this as firmly today as when you were attacking us. The desperate economic straits of the farmer and the continued annihilation of the family farm is of as much concern to us as the deepening industrial recession. In fact, one affects the other. One makes the other worse.

The two labor leaders conclude with a call for increasing the purchasing power of millions of Americans by extending the Fair Labor Standards Act to provide the $1 an hour minimum wage and the 40-hour workweek.

Mr. Speaker, I support the extension of this legislation from which millions will benefit, particularly the low-income families, and it will also serve as a boon to our sagging economy at this time. Under leave to extend my remarks, I am inserting into the RECORD the text of the letter to Secretary Benson, which reads as follows:

AMALGAMATED MEAT CUTTERS
AND BUTCHER WORKMEN
OF NORTH AMERICA, AFL–CIO,
Chicago, Ill., March 6, 1958.

The Honorable EZRA TAFT BENSON,
Secretary of Agriculture, United States Department of Agriculture, Washington, D. C.

DEAR MR. BENSON: After our union was invited to participate, two of our representatives attended the national food conference, held in Washington on Monday, February 24, 1958. We sent them to the conference because our union agrees with the stated objectives of the conference: the improvement of the American diet and the increase of American food consumption.

Our representatives called to our attention your speech to this conference. Although we cannot agree with all parts of the address, we were delighted to note the emphasis you put on the increased purchasing power of the American worker and the benefits this higher buying power bears for the farmer.

We are disappointed, however, that you failed to mention in your speech why workers have increased their purchasing power. The overwhelming credit must go to the trade-union movement which has done a tremendous job in raising the living standard of the American worker. The work and struggle of organized labor, not only in collective bargaining, but also in legislative programs to obtain such measures as the Fair Labor Standards Act and other basic welfare legislation, have benefited the entire Nation. This fight of the labor movement has not been a narrow one for selfish interests, but one which has made life more livable, more decent, more filled with dignity for all Americans.

We are glad to see that you have changed from your former attitude toward the wage gains of American workers. We recall that from 1955 to 1957, you continuously and falsely blamed the wage gains of workers for the farmers' economic plight. On one occasion, you specifically attacked the unions in the packinghouse industry, such as the Amalgamated Meat Cutters and Butcher Workmen, AFL–CIO. During this campaign of yours, our union answered by pointing out not only the falsity of your charge, but also of the invalidity of the figures you were using. But you kept on, nevertheless.

We showed that workers generally paid for their own increases through increased productivity and we emphasized, as you do now, although belatedly, that wage increases allow workers to purchase more food. We stated these increased purchases help the farmer.

We also continuously said that the worker must have sufficient money to buy the food and fiber the farmer grows, and the farmer must have a sufficient income to buy the products workers make and sell. We believe this as firmly today as when you were attacking us. The desperate economic straits of the farmer and the continued annihilation of the family farm is of as much concern to us as the deepening industrial recession. In fact, one affects the other. One makes the other worse.

Excessively low farm prices in relation to other segments of the economy, resulting in a depression in agriculture, drag the whole economy backward. We want prosperous family farms—not a feudal agriculture with little purchasing power for our products.

In your speech to the food conference, you also voice concern about the inability of millions of low-income families to buy sufficient amounts of food. You declared:

"But many families in low-income brackets are not getting proper food. * * * We still have a long way to go to bring all family diets up to the recommended nutritional goals. Three out of ten families surveyed in 1955, were short on calcium. Others were short on vitamins, minerals, and protein. And this study, remember, was based on the quantity and quality of foods entering the home."

We believe that the millions of Americans who are underfed must be helped both because human feeling and sympathy demand this and because added purchasing power is needed in the economy. We are, therefore, strongly backing legislation before the Congress to extend the Fair Labor Standards Act to some 6 million Americans now exempt from this law's provision. This legislation would provide these men and women with the $1 an hour minimum wage and the 40-hour workweek.

This legislation is not the total answer to the problems of America's poverty-stricken, underfed, and ill-housed, but it will help. We invite your support for this legislation as a means of helping both these low-income families and our Nation's farmers. The millions of men and women who would escape their worse-than-substandard wages by gaining the protection of the Fair Labor Standards Act would certainly use their additional income to buy the food and shelter they so desperately need. This would be a boon to the farmer by immensely increasing the purchase of food.

Very truly yours,

THOMAS J. LLOYD,
President.
PATRICK E. GORMAN,
Secretary-Treasurer.

The Position of the South on Race Relations

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. HÉBERT. Mr. Speaker, it has been with difficulty that the South has been able to make its position clear on the very controversial race problem.

In order to get the South's position before our friends from the North, the Joint Legislative Committee of the State of Louisiana purchased a full-page advertisement in the New York Herald Tribune spelling out the South's position on the subject.

I think it most proper and most informative to bring this full-page advertisement to the attention of the Congress and therefore have obtained consent to reproduce the following full page here:

THE POSITION OF THE SOUTH ON
RACE RELATIONS

To the People of New York City:

Recent tragic events in the integrated schools of Washington, D. C., Kansas City, Little Rock, and your own New York City suggest that an accurate presentation of the views of southern people on the race question might receive sympathetic consideration in the North and might even contribute to the solution of a problem in which we are now all concerned.

A PROBLEM UNIQUE WITHIN OUR NATION

Here in the United States we are witnessing an unprecedented attempt by certain white and Negro leaders to force the Negro people of our country to abandon their own culture and mores, lose themselves physically and culturally within other races, and commit racial suicide.

Meanwhile, outside of the United States every dynamic racial group in the world pridefully promotes its own culture. In view of their examples, should we not look twice before we leap?

In looking we do not propose here to review the influences behind the integration movement. (For detailed analysis of a major influence we recommend that you review Subversion in Racial Unrest, a documented study recently released by this committee.) Rather, let us here consider the logic of the movement and its ultimate effect on a country that we all love and cherish.

THE AMERICAN MAJORITY: A BLEND OF HOMOGENEOUS PEOPLES

You may ask: Doesn't this great country of ours represent a melting pot of different races? From a scientific standpoint, the answer is an unequivocal—No.

The vast majority of this Nation represents a blending of like peoples of common European ancestry, rather than a mixing of divergent races. But the energy and vitality which made America a great Nation arose neither from racial self-idolatry nor racial suicide—it was an outgrowth of a passionate love of individual liberty, balanced by a sense of justice and individual responsibility which makes this liberty possible. On such a foundation, a new Nation was created, capable of winning and retaining the love and loyalty of peoples of different races, different cultures and different religions.

WHAT ABOUT THE AMERICAN NEGRO?

We in the South think of our colored friends as Negro Americans, rather than as American Negroes. The normally cordial relationships between southern white and colored people are regulated by a set of conventions or customs, the product of years of experiment and experience in adjusting to a biracial society.

RACIAL PATTERNS—A COMMUNITY MATTER

These customs vary widely from State to State and indeed from community to community. Until May 17, 1954, each community in the South was a laboratory in which many of these customs were being constantly examined and revised to meet changing conditions. Each community adapted itself to the problems which confronted it.

It is significant that all of the communities in the South and, indeed, many of the communities in the North, agreed that separation of the races in the fields of elementary and secondary education was essential.

THE SOLUTION NORTH AND SOUTH

This method of adjustment, which has been loosely referred to as segregation, enabled both the Negro and white people in the South to overcome the devastating effects of the War Between the States and pile up a record of progress second to none in history.

We believe it will, in practice, enable our northern friends to adjust themselves to the more than one-half of the Negroes in this country who will live in the North by 1980.

A DANGEROUS PARALLEL

Now we are told that this is all wrong—that each community must conform to one unvarying racial pattern—complete integration—prescribed and enforced by a central governmental authority. But, the disastrous results of this policy are causing Americans to ask themselves: Is forced racial integration the answer?

At one time the belief was prevalent that all must attend the same church to prosper in the next world, as well as in this one. Many futile attempts of powerful groups in Europe to force their religious views on others only succeeded in dividing the continent into hostile camps. Ghastly wars and senseless massacres occurred in the conflicts over the rights of mankind to individuality, this time in the field of religion.

Today peoples of different nations may attend different churches without degradation or psychological injury to their personalities. Indeed, no one questions the right of a great religion to prohibit nonmembers from participating in certain of its rituals or partaking of its sacraments. "Experience keeps a dear school, but fools will learn in no other."

THE BEACON OF THE FUTURE

The trend to differentiation, racial and religious, represents a natural law, as well as a basic human right. Any attempt to force a rigid conformity in such matters of human relations must inevitably result in a repetition of the deadly European pattern of religious conflict.

Upon the establishment of workable race relations hinges the very fate of our great country. In the Talmud is a saying to the effect that time may, in some situations, resolve problems which cannot be solved by human intelligence at the moment. Now is the hour for Americans of all races to heed the wisdom of this counsel.

The Joint Legislative Committee, State of Louisiana, Baton Rouge: Senator W. M. Rainach, Chairman; Representative E. W. Gravolet, Jr., Vice Chairman, Point-a-La-Hache, La.; Represenative Carroll L. Dupont, Houma, La.; Senator Louis H. Folse, Arabi, La.; Representative John S. Garrett, Haynesville, La.; Senator H. W. Jones, Minden, La.; Representative Ford E. Stinson, Secretary, Benton, La.; Representative L. D. Napper, Ruston, La.; Senator B. R. Patton, Parmerville, La.; Senator Alvin T. Stumpf, Gretna, La.; W. M. Shaw, General Counsel, Homer, La.

Ninetieth Anniversary of the Miners National Bank of Wilkes-Barre

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 11, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

MINERS BANK 90TH YEAR

This is the 90th anniversary year of the Miners National Bank of Wilkes-Barre. It obtained its charter on February 13, 1868, and on July 9 of that year occupied its first home at what was then No. 107 Franklin Street and later No. 2 South Franklin Street. The building, since torn down, was situated on part of the site of the present Miners Bank Building.

The bank has grown until it is the largest in Wyoming Valley and the second largest in Northeastern Pennsylvania. Some of the more rapid growth of the bank has come in recent years as is evidenced by the existence of five branches in addition to the home institution.

In 1918, when the Miners Bank was celebrating the first half century of its existence, an exceedingly interesting history of the institution, written by Oscar Jewell Harvey, was published by the board of directors. In the succeeding 40 years, the Miners Bank has acquired a total of 7 other banks—the Luzerne County National in 1923, Wyoming Valley Trust Company in 1931, South Side Bank and Trust Company in 1932, the First National Bank of Nanticoke and the Miners National Bank of Nanticoke in 1952, the First National Bank of Dallas in 1953, the First National Bank of Ashley in 1957 with its branch at Mountaintop.

In an announcement today marking the anniversary, the Miners Bank expresses a hope that its friends will not think of the institution as bricks and mortar but as people. In view of the fact that its personnel has shared in a large measure in the responsibilities of community leadership, this concept of the Miners Bank family is readily acceptable. From one generation to another during the entire existence of the bank, officers and other members of the staff have responded readily and fruitfully to calls for community service. Therefore, the anniversary can be considered as something not restricted to the institution. It is a matter for proper notice by the people of Wilkes-Barre and its environs.

Originally the bank was called the Miners Savings Bank of Wilkes-Barre, and by majoring on savings accounts, the bank has from the beginning lived up to that name. Today about 60 percent of the deposits of this institution are in savings accounts.

Politics: A Job for Every Citizen

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 25, 1958

Mr. KEATING. Mr. Speaker, the American system depends on the active participation of each and every citizen in operation of his government. An informed and interested citizenry is the only way in which this system will work at its best.

Unfortunately, all too often we have witnessed the spectacle of large numbers of Americans staying away from the polls and failing to exercise most directly their voice in the choosing of those who make the laws. All too often, it becomes a real task to get qualified citizens to serve their communities and our great political parties.

More than ever, people seem to be completely engrossed in their own affairs and occupied with the many demands of modern living. That is quite understandable from the individual point of view, but if our democracy is to retain its validity and achieve its maximum goals, there must be a revival of interest in all fields of public service. There must be a quickened interest in the day to day workings of our Government and of our political parties. Only in that way can our system become as responsive and responsible as possible to the will of the people.

A most important aspect of this revival of interest must be a renewed understanding and appreciation of this game we call politics. Of course, we're always hearing talk about politics being a dirty business, and so on. Actually, politics is no more dirty a business than people will allow it to become. If more people take a greater interest in politics, if more people become active participants in it, the level of performance will be raised and the public interest better served.

I like to think of politics as the job of every citizen. If that ideal is put into practice, we will have insurance that at every level of government there will be honest and capable effort, expressive of the popular will and the American ideal of freedom.

These thoughts and others have been expressed far more eloquently than I ever could by Mr. Paul Miller, the editor and publisher of the Rochester (N. Y.) Times-Union. In succinct fashion, Mr. Miller has set down his credo that politics is a job for every American. Because he speaks from a wealth of experience in the field of journalism and has a distinguished career in public service, his words bear listening to. So that a wider

audience may have the benefit of his thoughts, I insert his remarks at this point in the RECORD, under leave previously granted:

YOU SHOULD GET INTO POLITICS—IT'S A JOB FOR EACH OF US

(By Paul Miller)

Here's a resolution you and I could make with profit to our Nation, our community, and ourselves:

Take just one-half the time we now give to various clubs and causes, and to professional groups and conventions, and devote that time to politics.

Yes, politics. From the precinct level on up.

Most of us will battle snow, slush, and all the rest of it, to the annual dinner of a social or business club, or take the heart out of an entire week for a trade or professional group convention.

Yet, how many of the same busy diners and conventioners even know the ward or town leaders of their party, much less turn out for the small party meetings that in sum add up to the big ones?

It is vital that people who never dreamed of getting into politics before, realize now that there's little more important civic activity that could claim them.

Big government no longer is something we are just trying to head off. It's here. And it's here to stay for as far ahead as we can see. The best we can do is try to keep it in some bounds—not lose freedom here in the battle for survival and peace in the world.

A letter to your Congressman no longer is enough. An individual who cares must get in himself. How?

Start, if you will, by joining your ward or town political club. If you become an officer, you'll probably get on a ward or town political committee—fundamental legal organization of a political party. Or you may want to shoot for that directly, without joining a club.

In any case, get to know your ward or town leader. He can recommend you to the rest of his political committee, push you along. Soon, you can be in the middle of political effort with acceptance at secondary policy level a possibility from there.

A prominent businessman told me the other day:

"I have resolved to resign from a national industrialists' organization and half a dozen activities around here and give the time in grassroots politics instead. Never thought I'd come to it."

That may be an indication of a trend. Perhaps our whole popular concept of political activity is changing. It'd better. Whether we like it or not—and who does—there will be more and more government. It must have more and more working attention.

The Honorable John L. Lewis Honored

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 11, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

UNITED STATES WELSHMAN OF YEAR

In presenting a medallion to John Llewellyn Lewis as the American Welshman of the year, the Philadelphia Welsh Society paid an impressive tribute to the president of the United Mine Workers of America whose forebears had their roots deep in the soil of the old country. John Lewis would qualify as the American Welshman of any year, such is the eminence he has attained in his country.

Like so many individuals of Welsh extraction, Mr. Lewis carved a career out of mining. This was a natural outlet because mining was, and is, a principal means of livelihood for the people of Wales.

The Philadelphia Welsh Society dates back more than two centuries, holding these annual functions on St. David's Day while Greater Wilkes-Barre still was a wilderness, over which the Indians roamed. To be singled out by a group so long established is no small distinction in itself.

The Dam Business

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 28, 1958

Mr. ULLMAN. Mr. Speaker, the decision of the Federal Power Commission to deny licenses for the construction of low dams at Mountain Sheep and Pleasant Valley was both a sound and a welcome determination from an Agency which has shown little previous concern for full development of our natural resources. Yet, the Commission's laudable decision was one of too little and too late at best, for it does nothing to rectify the damage done by earlier FPC decisions affecting the Snake River.

A recent editorial appearing in the Wallowa County Chieftain presents some clear thinking on this basic issue. I think these comments by Mr. Gwen Coffin, editor of the Chieftain, will be of interest to my colleagues:

THE DAM BUSINESS

An examination of the full opinion of the Federal Power Commission in denying licenses for the construction of dams at Mountain Sheep and Pleasant Valley reveals some matters which have received little publicity.

The Commission pins its entire case on the necessity of providing somewhere along the Columbia and Snake Rivers a minimum storage of water amounting to approximately 21 million acre-feet in order to limit the flow at The Dalles to 800,000 cubic feet per second. This was the firm recommendation of the Corps of Army Engineers in their master control plan.

The master control plan contemplated 2,300,000 feet of storage at Hells Canyon and did not recommend a dam at Nez Perce. However, when the FPC licensed three low dams in the Hells Canyon section of the Snake River only 1 million acre-feet of storage was provided, leaving 1,300,000 to be picked up somewhere beyond the Army engineers' recommended projects.

This is where the FPC got itself and everybody else in a jam. Having sacrificed this storage capacity at Hells Canyon they were forced into the position of having to pick it up somewhere else and the only place left was Nez Perce after all other sites and projects were figured. They could not approve another low dam, and certainly not two low dams at Mountain Sheep and Pleasant Valley and have the slightest chance of getting the total storage which the engineers demanded. Passing up the Army engineers' plan for a high dam in Hells Canyon put the FPC squarely on the spot.

Consequently the FPC could not license Mountain Sheep and Pleasant Valley with a storage of only 500,000 acre-feet. If they did, they recognized and admitted that they would have to authorize a high dam on the lower Salmon River (the lower canyon project) to get 1,560,000 acre-feet of storage there to meet the minimum storage requirements for this section of the Snake River area. But a high dam on the Salmon the FPC said, "would be subject to the same disadvantages with respect to the fish runs as Nez Perce without the advantages (power, control of the Imnaha, and additional storage) of the latter project."

The FPC also pointed out that the Mountain Sheep and Pleasant Valley projects would develop only 1,002,000 kilowatts at the site compared with 1,672,000 kilowatts for Nez Perce and said that in addition to the at-site generation Nez Perce, because of its greater water storage capacity, would confer substantially greater benefits with respect to the generation of power at downstream projects than would the Mountain Sheep-Pleasant Valley projects.

The FPC recognized the objections of the commercial fish industry and the sportsmen to a high dam below the Salmon and Imnaha at Nez Perce. However, they are of the opinion that ladders, lifts, and locks can move the fish upstream past the dam and they believe that methods will be devised to move the fingerlings downstream past the dams. The most promising method, the Commission said, is "to provide that the intakes to the generating units be located far below the surface of the water so that the downstream migrants will not be drawn into the turbines." A skimmers device would be used to operate near the surface of the pool and draw a current which would attract the fingerlings. The fingerlings would be deposited in the tail race of the dam. The FPC said that the skimmer device was installed on the Pelton project on the Deschutes River and has been recommended by the Secretary of the Interior for the Brownlee project.

The FPC opinion also points out that 25 percent of the entire Columbia River salmon and steelhead production occurs in the Snake River Basin above the Nez Perce site, and the annual gross value of this fish production, including sport fishing, was placed at $5,250,000. However, the FPC points out that $1,050,000 of this amount is attributable to production above the Mountain Sheep site and would be subject to hazard even under the Mountain Sheep-Pleasant Valley plan. The FPC also points out that the cost of catching, processing, and marketing the fish should be deducted to arrive at any net value of fish which might be lost.

If all efforts to move fish over the Nez Perce Dam should fail completely the gross (not net) annual loss would be something over $4 million, which would probably not represent over a 1 percent return on the investment in the Nez Perce Dam. And it is hardly conceivable that the effort to move fish past the dam would not be at least partially successful.

It therefore appears that the hue and cry of the fish industry is based upon money values which are almost insignificant when compared with the hundreds of millions of dollars involved in the construction of a dam at Nez Perce and the many more hundreds of millions which would be involved in the resulting expansion of power and industry and the development of new jobs and new communities.

It is a pretty safe assumption that the Mountain Sheep-Pleasant Valley project is as dead as a dodo bird. The alternatives now along this section of the Snake River

are: (1) A high dam at Hells Canyon flooding out Brownlee; (2) a high dam at Pleasant Valley flooding out Hells Canyon; or (3) a high dam at Nez Perce. There will be no more low dams where high dams are feasible.

And the sad part of it all is that every argument against low dams at Mountain Sheep-Pleasant Valley is applicable against the three low dams planned by the Idaho Power Co. When these dams were authorized a high dam at Nez Perce became the inevitable result.

As pointed out in some quarters, a high dam at Hells Canyon, flooding out Brownlee, would still make money and be a good investment even if the Idaho Power Co. is paid in full. We could then go back to the master control plan of the Army engineers where we belong.

Subversive Peril Mounts

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the first in a series of eight articles by the Honorable FRANCIS E. WALTER, of Pennsylvania, chairman, Committee on Un-American Activities. This article on the Communist Party apparatus in the United States appeared in the Philadelphia Inquirer:

UNITED STATES REDS BLOODY BUT UNBEATEN: SUBVERSIVE PERIL MOUNTS

(By Representative FRANCIS E. WALTER, of Pennsylvania, chairman, Committee on Un-American Activities)

When the Communist newspaper, the Daily Worker, suspended publication early this year, some Communist officials "admitted," with a suspiciously frank gloominess, that membership in the party had sunk as low as 8,000. Compared with the 25,000 members the Communist Party of the United States had boasted at its 16th national convention just 1 year ago, the present figure apparently marks a drastic decline in the party's prosperity. Compared with the 80,000 members who had joined the ranks in the depth of the depression of the 1930's, today's total seems to prove the Communist Party in America, for all practical purposes, has collapsed—and with it the danger of Red subversion in the United States.

The grim truth is just the opposite.

The past year has been one of the greatest periods of triumph for the Kremlin and its confederates throughout the free world. Within the United States, the Communist apparatus has evolved new implements of political conquest. These have found roots in, and have in turn contributed to, a dangerous climate of complacency which itself represents an acute threat to the very foundation of our security system.

The danger of communism is mounting—not receding. The United States remains the major target of Soviet aggression. Indifference to the Kremlin's avowed program of global conquest can lead only to the inevitable destruction of our free institutions and ourselves as a people.

It is not pleasant to state these conclusions. I would much prefer to report that the tide has turned against international communism and that the day of its dissolution is in sight. But I cannot do so.

Numerically, it is true, the membership of the Communist Party of the United States has declined. Partly, this is because many dilettantes have gradually left the fringes from which they had long gazed with starry-eyed credulity. A great deal of the "decline," however, is more apparent than real: Many party members have resigned—some with a great public fanfare—because it suits the party's purposes to have them go underground rather than to continue working as confessed Communists.

What Americans must never forget is this: Those remaining in the Communist apparatus comprise a hard core of revolutionaries who have consecrated themselves to accomplish the annihilation of our form of government. And, actually, there are half a dozen kinds of Communists.

First are the professionals, who may or may not be card-carrying party members. Then there is the concealed Communist, the sympathizer, the fellow traveler, the innocent who has been duped by the Communists and, finally, there is the opportunist. For every party member, there may be hundreds able and willing to do the party's work. Put another way, there are at this moment the equivalent of some 20 combat divisions of enemy troops on American soil, engaged in propaganda, espionage and subversion—troops that are loyal only to the Soviet Union.

During the past year a nationwide campaign of political subversion directed by the Communist Party and aided by numerous affiliate organizations, has spread throughout the United States, as a part of what may emerge as the most successful technique thus far devised by the Soviet apparatus in this country.

Into this campaign, the Kremlin has succeeded in enlisting, at a conservative estimate, more than a million Americans. Their participation has ranged from membership in the farflung network of Communist-front organizations to the signing of Communist-sponsored petitions and has included substantial financial contributions.

Let me make this clear: I do not say there are 1 million Communists in this country. Far from it. It is only fair to say that many of the persons who have taken part in this subversive campaign would be aghast if they understood the full import of their actions and if they appreciated the extent to which they had unwittingly benefited the Communist conspiracy.

The clear objective of this campaign is the destruction of the entire security system of the United States. More immediately, it seeks to cripple the antisubversive programs of the executive branch of the Government and of Congress.

It would do this in two ways: One, by shackling or abolishing the Committee on Un-American Activities; two, by discrediting the Federal Bureau of Investigation and its Director, J. Edgar Hoover.

This drive is best exemplified by the work of the so-called Emergency Civil Liberties Committee, which inaugurated its campaign against the FBI and the Un-American Activities Committee at a rally in Carnegie Hall, New York, just a few months ago.

One of the speakers was Dalton Trumbo, playwright and screen writer, a member of the notorious Hollywood ten who was convicted and sentenced for contempt of Congress in refusing to tell the Un-American Activities Committee whether he was a Communist.

Trumbo loudly vilified the committee, J. Edgar Hoover and the FBI and crudely derided a group of Hungarian patriots who were picketing the rally. His speech, and those of others, made clear the objectives of the campaign. Communists not only seek to destroy the House committee but to wreck completely the investigative powers of Congress in the field of subversive activities.

So far as our committee was concerned, the Communists not only admitted their goal—they boasted of it. Harvey O'Connor, chairman of the Emergency Civil Liberties Committee, hailed the New York rally as "historical, because it opens the abolition campaign against the House Committee on Un-American Activities."

O'Connor was identified as a member of the Communist Party by Benjamin Gitlow, a former secretary general of the party, as long ago as October 17, 1939. In addition, he has a long record of association with numerous Communist-front organizations.

His chief assistant, as vice chairman of the abolition drive, was Corliss Lamont, who for years has been one of the foremost apologists for the Soviet Union in the United States.

The O'Connor-Lamont outfit as I said, made no attempt to camouflage its determination to abolish the anti-Communist agencies of Congress but in its attacks on the Federal Bureau of Investigation it was slightly more subtle. Typical of its tactics was an advertisement which appeared in a few magazines, headed, "You and the FBI."

Avoiding a frontal attack, the committee cunningly suggests that FBI agents engage in tactics of intimidation against American citizens. Stripped of its Communist gibberish, the advertisement flatly advises Americans to ignore FBI investigators who may enlist their help in protecting the security of the United States.

"The FBI, unlike courts and grand juries, does not have the power of subpena and of compulsory examination," it declares. "You may decline an invitation to visit FBI agents or to receive them at your home or office."

Then, the advertisement goes on to suggest that G-men engage in political intimidation, like the brutal secret police who characterize every Communist state.

"Unfortunately," it continues with mock concern, "at the present time many FBI inquiries appear to be concerned with political associations rather than with obtaining facts for the constructive purposes of criminal investigation. The very nature of political inquiries means that many of the questions will be of the sort which no citizen is, or should be, required to answer.

"Finally, the use of investigative power by governmental agencies to intimidate or threaten is expressly forbidden by law. We suggest that you report any attempt at intimidation to the Emergency Civil Liberties Committee."

The effrontery of such an attack is obvious when one remembers that its intended victim, the FBI, is the agency which exposed such Communist enemies of the United States as Harry Gold, David Greenglass, and Ethel and Julius Rosenberg—all convicted atomic spies; Judith Coplon, a Justice Department employee convicted of passing secret information to a Soviet diplomat—but who escaped prison on a technicality.

In subsequent articles I will review these cases. They are well worth remembering—and all Americans should keep them in mind when they read such shabby, snide attacks on the FBI by Communist-directed organizations such as the one I have mentioned above.

Here I wish to discuss the Communist menace in more general terms. The Russians themselves have made one aspect of the peril clear enough, by the satellites they have sent soaring into space within the past few months. These present fresh evidence of Soviet Russia's technological progress, a progress made possible to a large degree by the penetration of our internal defenses by Soviet conspirators and their theft of some of our most vital military and scientific secrets.

Communist political subversion presents a danger to the American people equaling that

of Soviet satellites and long-range missiles. The U. S. S. R. would prefer to achieve its program without the physical destruction of its enemies; if the gates can be opened from within by dupes and Communist agents, overt aggression by the Soviet Union will obviously be unnecessary.

This would be the fulfillment of Lenin's prophecy, made at the inception of the international Communist empire:

"First," he said, "we will take Eastern Europe, then the masses of Asia, then we will encircle the United States, which will be the last bastion of capitalism. It will fall like an overripe fruit into our hands."

The Communist Party in America, since the death of Stalin, has lost considerable numerical membership. Nevertheless, the Communist leadership in the United States has proved itself equal to its assigned task. In a fundamental shift of tactics, their old cries of revolution and forcible overthrow of the Government have been muted and replaced by more subtle calls for "peaceful coexistence," "universal disarmament" and the like.

It is essential to remember, however, that the effectiveness of the Communist operation has nothing whatever to do with the size of the party. A compact, hard-core elite can be and is of greater value to the Kremlin than would be an unwieldy mass of undisciplined and various adherents.

As the normal party structure recedes from view, it is being replaced by a widespread undercover apparatus, duplicating—beneath the surface—all the mechanisms of Communist Party Activities: Printing and publishing Communist propaganda, formulating strategy, and leading the apparatus.

A few months ago, in a series of articles in the Inquirer, I related the exploits of the counterspy Borris Morros, who enabled this country to unmask agents of the international Soviet apparatus.

His story demonstrated, with new emphasis, the constant secret warfare of the Communist empire against the United States and its free world allies. The danger is heightened by the fact that it lies hidden from our view and stems in many cases from persons who would not ordinarily be suspected as agents of the Kremlin.

It is instructive that Morros himself, regarded by the Soviets as a key instrument of espionage in the West, had no affiliation with the Communist Party or any Communist fronts. This explains how anyone in such a capacity can swear under oath that he is not a Communist and never has been a Communist and yet can be important in the Soviet apparatus.

Col. William T. Roy

SPEECH
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. GAVIN. Mr. Speaker, my sincere congratulations on his birthday anniversary to my good and able friend, the distinguished Assistant Parliamentarian, Col. William T. Roy, who has so faithfully served us for the past 27 years in the House of Representatives.

Also, it is with deep regret that I note his retirement after his many years of public service in this body.

Bill has been a hard-working, conscientious public servant during his service here in the House—always ready with his great gift of understanding, experience and ability to be helpful in any way he could. His work has been outstanding, and he has earned and deserves the hearty commendations of the Members of the House for the excellence of his performance. He has turned in a magnificent record of which he can well be proud.

Bill has been my very good friend since my coming to Congress. We certainly will miss the fine companionship which we have enjoyed with him over the years. No matter what request was made of Bill, he was always greatly pleased when any little act or deed of his added to the happiness of any of us.

It is my sincere hope that Bill's health will greatly improve and that in his retirement he will find great happiness. My wish for him is that he will enjoy all the good things in life over the years ahead.

American, Rather Than Foreign, Aid

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein the following editorial from the Somersworth Free Press, Somersworth, N. H., on March 6, 1958, entitled "American, Rather Than Foreign, Aid":

AMERICAN, RATHER THAN FOREIGN, AID

Congressman CHESTER MERROW makes a point on this question of so-called foreign aid which strikes a responsive chord with us. He says the term should better be American aid, because the dollars this country sends abroad are as much an investment in the security of this country as they are designed to strengthen the country to which they go.

We know it's popular to decry the use of American money abroad; we know it's almost no effort at all to talk about giveaways and of pouring dollars down ratholes. But we also know that the facts, for those who wish to examine them, show convincingly that the funds which Congress appropriates each year for the help of other peoples in other parts of the world are one of the best investments which this country makes toward keeping the cold war from getting hot and of putting off the day when American boys will have to go to war.

This subject of aid isn't just a matter of charity with this country; our motives aren't all altruism as some would have you believe. As example, of every one of those dollars that go abroad, 75 cents of it is spent right here in this country in the form of a purchase of an American product from an American businessman or farmer. Then the people who share in the program of foreign aid—this includes the people who grow the products or manufacture the equipment which is to be bought and sent overseas—represent a sizable number. That figure, to be exact, is 600,000 men and women.

Once that aid is overseas it performs a dual job. First it in many cases is employed by a country that, without the aid, would be a natural prey to the spreading scourge of communism. It is the shot in the arm to provide immunization against Red infiltration and eventual overthrow of western-oriented or neutral powers. In other instances, such as South Korea, the aid results in a direct tax saving to American citizens. It permits the arming of a native of that country at a cost of $302 to hold the position that an American soldier would otherwise be forced to hold at a cost to taxpayers near the $4,000 mark.

Perhaps there is no better evidence of the value of dollar aid to other countries than in the recent news that Russia has stepped up her economic assistance program and, indeed, in the past 2½ years has pledged and expended the largest share of $1.5 billion to 10 undeveloped nations. In that same period of time the United States had given those countries less than $1 billion. With this money the Russians have been building petroleum refineries in Syria, steel mills in India, and flour mills in Aghanistan.

Supporting a program of aid to other lands such as the foreign-aid program calls for, may seem to be a remote matter to folks who live in a small New Hampshire community such as ours. Actually, though, it isn't remote and the good which may result from it is the sort that could keep your son or loved one from again having to bear arms on a field of battle.

Volunteer Firemen's Bill

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 6, 1958

Mr. MAY. Mr. Speaker, today I am introducing a companion measure to H. R. 3406, introduced by my colleague, the gentleman from Indiana, F. JAY NIMTZ. This bill would authorize the Administrator of the Federal Properties and Administrative Services Act to donate surplus equipment and materials to volunteer fire fighting organizations throughout the country,

At present, such surplus equipment can be donated free of charge to educational and public health institutions. They are required to pay only the costs of care and handling.

Many small communities throughout our Nation depend solely upon volunteer fire departments for their protection. The task is admirably performed by dedicated men. There is always present, however, the struggle to raise funds for badly needed equipment; funds are often meager and the equipment insufficient. It would be difficult for me to think of more deserving recipients of Federal surplus property than the volunteer fire departments of the Nation, who would put this equipment to the direct use of saving lives and property. Inasmuch as I am a member of the Subcommittee on Donable Property of the House Government Operations Committee, I have become deeply interested and spent considerable time analyzing this proposed legislation. In my opinion, Mr. Speaker, the gentleman from Indiana, Congressman NIMTZ, has performed a great service to the pepole with his bill designed to bolster the fire-fighting ability of our volunteer fire departments. I wish to support him strongly in his endeavor through the introduction of this companion measure.

Can We Control Slumps?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 4, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following scholarly survey of the policies available for preventing economic slumps. The article, by Prof. Roy Blough, appeared in the Saturday Review of January 18, 1958:

CAN WE CONTROL SLUMPS?

(By Roy Blough)

The year 1958 has opened with the level of business activity falling and the level of unemployment rising. For the third time since World War II the American public is wondering if we are headed for the kind of major depression that has followed most of our big wars. The major problem of economic instability during the past decade has been inflation, but we continue to be highly depression-conscious. It is well that we are, for in addition to its tragic domestic effects a major depression would be a major disaster in international politics. It would be an apparent fulfilment of Soviet prophecies and would come at a time when the international horizon is blacker than it has been for some years. Even a minor depression would be a blow to our efforts to keep uncommitted nations out of the Soviet orbit.

If we became bogged down in a major depression, a tremendous expansion of market demand for goods and services would be required to pull us out. The only likely source of such demand would be large-scale deficit spending by the Federal Government. There can be no serious doubt that the Government could pull us out of a depression if it undertook enough deficit spending. The experience of the war proved that. But large-scale deficit spending is something to be avoided if possible, for a variety of reasons.

Pulling the economy out of a major depression is a last resort but not an acceptable goal of national policy. Much more attractive is the accepted economic goal of this country, namely, economic stability with growth, that is, the simultaneous maintenance of high employment, stable prices, and continually rising levels of per capita production and consumption. It is also a more practical goal than pulling the economy out of a depression, just as it is more practical for a performer on a high wire to maintain his balance than to jump up again in case he falls off.

Maintaining economic stability with growth requires both broad powers and delicate balance. Only the Federal Government has the financial resources and universal coverage necessary to do the job, and even it must achieve a difficult combination of conditions.

First, the policymakers of Government must have available to them adequate measures for achieving high employment while keeping prices stable, and for maintaining economic stability without unduly checking economic growth.

Second, they must be able to determine when and with what force to apply such measures.

Third, they must have the will and courage to apply the necessary measures at the right time and with the correct force.

To what extent have these three conditions been met? Judged by results since the war, they have not been met perfectly. There have been inflations and deflations, and recently consumer prices have continued to rise even in the midst of a business decline. Nevertheless, the record must be judged a good one. War crises, not peacetime economic forces, generated the major price inflations, including the repressed inflation that broke out after markets were set free. The recessions of 1949 and 1953 were relatively short and mild. After 1951 there was a considerable period of overall price stability. Clearly, unless we have been enjoying fantastic luck, the necessary conditions must have been met in considerable degree.

It is by now widely recognized that the group of measures commonly referred to as fiscal policy and monetary policy are the main instruments for maintaining economic stability. Monetary policy acts by influencing the amount of private consumer and business demand; fiscal policy, in addition, compensates through changes in Government spending for changes in private demand.

The exercise of fiscal policy is carried out by varying upward and downward the amounts of Federal expenditures and of tax collections, whether automatically through the built-in stabilizers of some 20 governmental programs, or by legislative and, to a lesser extent, administrative action. The exercise of monetary policy, which is in the hands of the Federal Reserve System, under congressional authority, is carried out by varying the supply of bank money through adjusting rediscount rates and bank reserve ratios and through open market operations.

Fiscal policy and monetary policy are very powerful instruments, but they have their defects.

First, they are general controls applying to the whole economy and cannot be pinpointed to meet problems of particular sectors or geographical areas.

Second, fiscal and monetary policies involve time lags that interfere with their effective use. One kind of time lag is the interval that elapses after the need for action is recognized but before action is taken. This may be very short in the case of monetary policy; it is likely to be several months in the case of fiscal policy, especially when congressional action is required.

Another kind of time lag is the interval that elapses after action is taken but before the action has an impact on the economy. In the case of monetary policy this lag varies according to the sector of the economy, the stock market perhaps responding instantly while the home-building market may respond only after 6 months or more. In the case of fiscal policy even longer lags may be involved—as long as 2 or 3 years in the case of a public-works program. An antidepression public-works program might well come into full effect just in time to accelerate a lively inflation.

Third, fiscal and monetary policies have not demonstrated much effectiveness in dealing with cost-push inflation; that is, inflation initiated by the pushing up of wages more rapidly than the rise in productivity, and to a lesser extent by the raising of administered prices of materials and other cost items. Given a national attitude that apparently does not accept a substantial degree of unemployment, creeping cost-push inflation remains a problem.

Fourth, fiscal and monetary policies may not be powerful enough in themselves to maintain economic stability in the presence of strong shocks from the outside, such as hot or cold wars. Dealing with the impact of such shocks may require more drastic measures, such as price controls, wage controls, and rationing. Such measures are too wasteful in the resultant allocation of resources, too difficult to administer, and too restrictive of economic growth to be used except in periods of economic emergency. Less drastic measures, such as controls of installment credit and real-estate credit, are appropriate for use in more normal situations but are not now available except through new congressional action.

Despite their defects, which make the task of the economic stabilizer a difficult one, I believe the instruments available are reasonably adequate to avoid major instabilities that arise in the normal course of the operations of the national economy.

Let us turn to the second condition mentioned above; namely, that to achieve economic stability policymakers must be able to determine when and with what force to apply the various stabilization measures. Do we know enough about our highly complex economy to judge accurately what the economic situation is, and can we forecast well enough to determine when and how vigorously we should use the stabilizing instruments at our disposal?

There is no lack of personal competence. I believe it is only fair to say that the generality of the economists and statisticians in the Federal Government are highly competent, and have an integrity and devotion to the public interest of a very high order. They can advise policymakers on the use of stabilization measures, if anyone can.

There are two kinds of requirements for knowing when, and how forcefully, to apply monetary and fiscal policy. One requirement is adequate information about the ramifications of our highly complex economy. Today the information is far superior to what was available in 1929. A whole system of national economic accounts has been developed which greatly enlarges our grasp of the operation of the economy.

There still remain, however, many gaps in the information called for by this system of accounts. Many figures that are needed quarterly or more frequently are available only annually. The figures in some of the statistical series are unreliable because of inadequate sampling. These defects are due to lack of money. Congress, despite urging, has been niggardly in providing the relatively small amounts required.

The second kind of requirement is good forecasting. Even with the best of statistics, economic forecasting is likely to remain an art rather than becoming a science in the foreseeable future. There is no forecasting except by projecting past experience into the future, which requires a full understanding of past experience and assumes the continuity of past economic relationships into the future. The enormous complexity of the economy, the impact of overseas developments, the frequent occurrence of unpredictable events, the mass movement of public responses to such events, and the effect of forecasts on what actually happens, all add to the difficulties of forecasting.

The impossibility of making precise and continually reliable forecasts is regrettable but not fatal. Despite lapses, Government economists in the main continue to be close enough to the situation to chalk up a very acceptable record. We must not expect perfection. If we are satisfied with reasonable expectations, I believe knowledge is sufficient to permit the prevention of serious depression and serious inflation in the absence of very powerful forces outside the normal operation of the economy, such as war. Certainly, we are far better off in this respect than we were in 1929 and subsequent years.

There remains the question of whether our policymakers and the public whose support they require have the will and courage to carry out stabilizing policies.

We are clearly better off in this respect also than we were in 1929, at least with re-

spect to dealing with downward business movements. The public learned a good deal from the depression and was freed from some economic superstitions and inhibitions. If anything, it is prone to call for action that is not necessary.

Nevertheless, timely and vigorous action even to offset downward movements is not assured. Recovery always seems about to take place—"prosperity is just around the corner." Some persons in official life do not believe in fiscal policy; they do not accept deficits as a means of promoting recovery. Those who do accept fiscal policy regret giving up the balanced budget because of its symbolic power in promoting fiscal responsibility. Moreover, tax reductions, which are the most readily available fiscal policy measure, are virtually irreversible in practice; they must be used sparingly if they are not to contribute to future inflation.

This suggests the crux of the matter. Economic stabilization is a two-way street. If there is to be stimulation of the economy in recessions, there must be offsetting restrictions in inflation. If there are to be deficits in some years, there must be offsetting surpluses in others. Policymakers may be reluctant to take vigorous steps to stop downswings because they fear, with justification, that they will not have public support in halting inflationary movements, whether these are the results of excessive action to halt downward movements, or grow out of other developments within or outside the economy. Monetary policy has been applied with considerable skill and courage, but in the face of vigorous criticism. We have had notable lack of success in using fiscal policy to fight inflationary movements. The reasons are not hard to understand. Persons want prices to rise for what they sell, even while they protest inflation in general. Buyers as well as sellers are annoyed by restrictions on purchases that result from the tightening of credit. Escalation of prices and wages is built into many kinds of transactions, notably farm parity prices and wage agreements. Everyone is annoyed by tax increases. We have yet to see an increase in taxes adopted as an anti-inflationary measure at a time when the Treasury was anticipating a balanced budget or a surplus.

The Government is not well organized to achieve a unified policy to promote economic stability, even with the Council of Economic Advisers and the Congressional Joint Economic Committee. The various departments operate with a large measure of independence under congressional authority. Congress in turn lacks policy-unifying machinery strong enough to offset the fragmentation of policymaking among numerous legislative committees, each with its own objectives and public clientele.

My conclusions may be summarized briefly. The Federal Government can pull the country out of a major depression through deficit spending, but the far better and easier course is to prevent one by maintaining economic stability with growth. Our instruments for maintaining stability are not perfect but they are reasonably adequate. Our knowledge, our facts, and our ability to forecast are not perfect either, but they are not so deficient as to prevent effective action. The Federal Government has structural aspects that make unified stabilization policy difficult to achieve. This might delay action to meet developing recessions or inflations until a good deal of damage was done. The public support of antidepression measures is likely to be strong, but unless the complacency toward inflation can be replaced with effective support for anti-inflationary measures, our national policy of economic stability with growth faces troubled waters ahead.

Resolutions Memorializing Congress Against Certain Legislation Commonly Referred to as Right-To-Work Legislation

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include resolutions adopted by the General Court of Massachusetts on February 26, 1958.

RESOLUTIONS MEMORIALIZING CONGRESS AGAINST CERTAIN LEGISLATION COMMONLY REFERRED TO AS RIGHT-TO-WORK LEGISLATION

Resolved, That the General Court of Massachusetts respectfully urges the Congress of the United States not to enact any legislation relating to the right to work, so-called, or any similar legislation designed to prohibit closed shops or to provide that no employee shall as a condition of his employment be required to join a labor union, which proposed legislation will, if enacted, tend to undermine the strength of labor and of labor unions throughout the country; and be it further

Resolved, That copies of these resolutions be transmitted forthwith by the Secretary of the Commonwealth to the presiding officer of each branch of the Congress of the United States, and to each member thereof from this commonwealth.

House of Representatives, adopted, February 24, 1958.

LAWRENCE R. GROVE, *Clerk.*

Senate, adopted in concurrence, February 26, 1958.

IRVING N. HAYDEN, *Clerk.*

Attest:

EDWARD J. CRONIN,
Secretary of the Commonwealth.

New President of the Giants Despair Hill Climb Association

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

HILL CLIMB PRESIDENT

In the election of Dr. W. R. A. Boben to the presidency of the Giants Despair Hill Climb Association, the board has entrusted the leadership of the organization to a professional man with an impressive background of public service.

During the Second World War, Dr. Boben was a flight surgeon who was cited for heroism.

His peacetime activities, apart from his duties as a practitioner, have covered a wide range, including tours of duty as president or chairman of a half dozen bodies, evidence of his executive ability.

In drawing upon his experience, the Hill Climb Association is putting at the helm a man with many contacts who knows his way around the community and has demonstrated his willingness to share his time and talents in many worthy causes.

It is stimulating to have residents of the caliber of Dr. Boben put the public interest ahead of personal considerations.

More Signs of the Times: Farmers Going to Cities

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mrs. KNUTSON. Mr. Speaker, Letters continue to come in giving instances where trained farmers have been forced out of their occupation by present farm policies. Under unanimous consent I request permission to quote from another of these written me by a young man who had to quit his chosen occupation of farming:

FARGO, N. DAK.

DEAR CONGRESSWOMAN: First of all I wish to thank you for sending me a copy of the agriculture hearings at Fergus Falls. I wish I could have been there and testified also. I remember the time the hearings were at Moorhead when I testified. In my testimony I said that 13 farm boys in my high school class started farming after high school and that there were 3 still farming at that time (2 years ago). Well, Coya, now there are only two, as I quit farming a year ago too, and went to work with Farmers Union GTA.

This just goes to show the steady drain of the farm boys which leave the farm to go into something else, but into what are they going to find work? With close to 5 million people out of work. I too loved farming, but as a renter I could not see that borrowing money against my personal property year after year to operate was such a wise thing either. Certainly the farmer must get a break pretty soon.

Sincerely,

BILL WIGDAHL.

Soil Conservation Pays Dividends

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bethlehem, Pa., Leader-Vindicator of March 5, 1958:

SOIL CONSERVATION PAYS DIVIDENDS

Fitting indeed was the underscoring by our State department of agriculture of the fact that all Pennsylvania taxpayers benefit from soil conservation districts in one way or another.

It is a fact, tragically, too few realize.

Those in soil conservation districts—farmers themselves in some cases—all too often fail to realize the tremendous importance of soil conservation.

But in soil conservation not only farmers themselves are benefited—virtually everyone is benefited.

How come? Use Pennsylvania's highway system as an example.

Along a stretch of test highway in York County it was found that it cost the Commonwealth—that's you taxpayers—$116 a year to maintain 1,200 feet of highway where farmers did not practice soil conservation.

However, on another stretch of the same highway where erosion has been reduced through conservation practices, the cost of maintenance for the year was $9.

It's as simple as that.

Farmers themselves benefit. Their good soil is retained. Their farm property retains a high value. There are good crops.

Everyone else benefits. The water everyone uses is better, more plentiful, and less costly. Conservation is everywhere.

Even the lowly highways benefit.

Library Services Act

EXTENSION OF REMARKS
OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 11, 1958

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an editorial from the New York Times, New York, N. Y., on Sunday, March 9, 1958, entitled "Library Services Act."

LIBRARY SERVICES ACT

In 1956 the Congress of the United States recognized the urgent need for public-library development when it adopted the Library Services Act. This law called for the expenditure of $7,500,000 a year for 5 years to enable the States and Territories to set up and develop public-library programs in the rural and sparsely populated areas of their States with funds supplied on a matching basis.

The first year's allotment was only $2,500,000 instead of the called-for $7,500,000. With only one-third of the allotment available many States started their programs with hopes that the following year would bring the full appropriation. Last year, after much discussion, only $5 million was allocated to this worthy educational purpose. This year the funds under the act have been reduced to $3 million.

Forty-eight States and Territories out of a possible 53 have started administering approved programs under the Library Services Act. Regional centers have been set up to broaden the base of library service which is needed to support the educational effort in rural areas. It is to the advantage of this country to see that all of its educational institutions work at maximum efficiency. Schools are only one facet of our educational system. The public library, frequently called the people's university is another important one. Unless the full appropriation of $7,500,000 is voted this and the next 2 years the existing State efforts to enlarge the educational plant of this country with needed libraries will be throttled on the verge of bringing the tools of information and education to 27 million people whose geographical location put them beyond the pale of such service in years before the act.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.
